SENSED PARAMETER	FAULT CODE	ACCEPTABLE OPERATING RANGE AND RATIONALITY	PRIMARY MALFUNCTION DETECTION PARAMETERS	SECONDARY MONITORING PARAMETERS AND CONDITIONS	MONITORING TIME LENGTH AND FREQUENCY OF CHECK	FAULT CODE STORAGE AND MIL ILLUMINATION
Mass Air Flow Circuit Range/ Performance	P0101 (L56 only)	1280 hz to 10496 hz 1.5 g/s to 342 g/s	Must fail test 1 and only one of the following tests: 4a, 4b, 4c or 4d of the EGR Diagnostic Tests	P0405, P0406, P0102 and P0103 must not be Set Baro > 75kPa		В
Mass Air Flow Sensor Circuit Low Frequency	P0102 (L56 only)	1280 hz to 10496 hz 1.5 g/s to 342 g/s Detects a sensor circuit low frequency	Mass Air Flow Input Frequency < 1280hz - same as - Mass Air Flow < 1.5 g/s	Engine Speed > 0 RPM Ignition Voltage > 8.5v	Test performed continuously Diagnostic set conditions true for 2 seconds Test performed continuously	В
Mass Air Flow Sensor Circuit High Frequency	P0103 (L56 only)	1280 hz to 10496 hz 1.5 g/s to 342 g/s Detects a sensor circuit high frequency	Mass Air Flow Input Frequency > 10496hz - same as - Mass Air Flow > 342 g/s	Engine Speed > 0 RPM Ignition Voltage > 8.5v P0102 Clear or Disabled	Diagnostic set conditions true for 2 seconds Test performed continuously	В
Intake Air Temperature Circuit Low Input	P0112	0.24 volt to 4.86 volts -40°C to 152°C Detects a sensor circuit short to ground	Air temperature sensor voltage < 0.24 volt - same as - Air temperature > 160°C	Coolant temperature < 42.5°C	Diagnostic set conditions true for 2 seconds Test performed continuously	В
Intake Air Temperature Circuit High Input	P0113	0.24 volt to 4.86 volts -40°C to 152°C Detects a sensor circuit short to high voltage or a sensor circuit open	Air temperature sensor voltage > 4.86 volt - same as - Air temperature < -40°C	Engine has been running > 8 minutes	Diagnostic set conditions true for 2 seconds Test performed continuously	В
Engine Coolant Temperature Circuit Low Input	P0117	0.24 volt to 4.76 volts -40°C to 152°C Detects a sensor circuit short to ground	Coolant temperature sensor voltage < 0.24 volt - same as - Coolant temperature > 160°C		Diagnostic set conditions true for 2 seconds Test performed continuously	В
Engine Coolant Temperature Circuit High Input	P0118	0.24 volt to 4.76 volts -40°C to 152°C Detects a sensor circuit short to high high voltage or a sensor circuit open	Coolant temperature sensor voltage > 4.76 volt - same as - Coolant temperature < -40°C	Engine run timer > 8 minutes	Diagnostic set conditions true for 2 seconds Test performed continuously	В
Insufficient Coolant Temp for Stable Operation	P0126	Engine Temperature > 56°C Detects engine not warm enough for stable operation	Engine run time >= 600s Engine temperature < 56°C Fuel burned since start >= 1,000,000cu.mm. Total idle time since start < 450s - OR -	*Ambient air temperature < f(eng. startup temp); Ambient air temp > -7°C; -7°C < Engine start-up temp < 56°C; Engine is running; P0126 not yet passed; P0112, P0113, P0117 and P0118 not set. * See Table DGTCMIT	Diagnostic set conditions true for 2 seconds	В
			Engine run time >= 300s Engine Temperature < 56°C Fuel burned since start >= 468,120cu.mm. Total idle time since start < 225s	*Ambient air temperature >= f(eng. startup temp); Ambient air temp > -7°C; -7°C < Engine start-up temp < 56°C; Engine is running; P0126 not yet passed; P0112, P0113, P0117 and P0118 not set. * See Table DGTCMIT	Test performed once from start-up until a pass/fail/disable condition exists.	
Fuel Temperature Sensor Circuit Low Input	P0182	0.24 volts - 4.96 volts 17°C - 106°C Detects a sensor circuit short to ground	Fuel temperature < 0.24 volts - same as - Fuel temperature > 106°C	None	Diagnostic set conditions true for 2 seconds Test performed continuously	В

\* Backup fueling mode occurs if any of the following codes are set: P0251, P0335, P0370

		ACCEPTABLE	PRIMARY	SECONDARY	MONITORING	FAULT CODE
