

17 OBDG01 ECM Summary Tables (Initial DTCs)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Intake Camshaft Actuator Solenoid Circuit Open – Bank 1	P0010	Controller specific output driver circuit diagnoses the CAM phaser oil control valve solenoid high sided driver for an open circuit failure when the output is powered on by comparing a voltage measurement to controller specific voltage thresholds.	Voltage measurement outside of controller specific acceptable range during driver on state indicates open circuit failure. Controller specific output driver circuit voltage thresholds are set to meet the following controller specification for an open circuit.	$\geq 200 \text{ K } \Omega$ impedance between signal and controller ground.	System supply voltage Output driver is commanded on Ignition switch is in crank or run position	> 11.00 Volts	20 failures out of 25 samples 250 ms /sample, continuous	Type B, 2 Trips

17 OBDG01 ECM Summary Tables (Initial DTCs)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Intake Camshaft System Performance – Bank 1	P0011	Detects a VVT system error by comparing the desired and actual cam positions when VVT is activated.	Camshaft position error [absolute value of (desired position - actual position)] is compared to thresholds to determine if excessive.	(Intake cam Bank 1) Cam Position Error > (P0011_CamPosErrorLimlc1) deg	Intake Cam Phsr Enable System Voltage Engine Running Power Take Off (PTO) active Desired cam position Desired AND Measured cam position Desired cam position variation No Active DTCs	= TRUE > 11.00 Volts = TRUE = FALSE > 0 deg > (P0011_CamPosErrorLimlc1) deg AND < (CalculatedPerfMaxlc1) deg < 5.00 deg for (P0011_P05CC_StablePositionTimeIc1) seconds P0010 P2088 P2089	300.00 failures out of 400.00 samples 100 ms /sample	Type B, 2 Trips

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Engine Coolant Temperature (ECT) Sensor Circuit Intermittent	P0119	Circuit Erratic This DTC detects large step changes in the ECT (Engine Coolant temperature) signal circuit or the ECT sensor. Allowable high and low limits are calculated for the next sample based on the previous sample and sensor time constant. If the sensor responds faster than should be possible the DTC is set.	ECT temperature step change: 1) positive step change is greater than calculated high limit OR 2) negative step change is lower than calculated low limit. The calculated high and low limits for the next reading use the following calibrations: 1) Sensor time constant 2) Sensor low limit 3) Sensor high limit *****Generic Example***** If the last ECT reading was 90 Deg C, the Time constant was calibrated at 10 seconds, the low limit was calibrated to -80 Deg C and the high limit was calibrated to 200 Deg C the caluculated limits are 101 Deg C and 73 Deg C. The next reading (after the 90 Deg C reading) must be between 73 Deg C and 101 Deg C to be valid.	13.0 seconds -60.0 Deg C 150.0 Deg C	No Active DTC's	ECT_Sensor_Ckt_FP	3 failures out of 4 samples 1 sec/ sample Continuous	Type B, 2 Trips

Fuel System Too Rich Bank 1	P0172	<p>Determines if the fuel control system is in a rich condition, based on the filtered long-term fuel trim metric. A normally operating system operates centered around long-term fuel trim metric of 1.0. For rich conditions less fuel trim is required therefore values < 1.0 indicate a rich condition.</p> <p>There are two methods to determine a Rich fault. They are Passive and Intrusive.</p> <p>A Passive Test decision can be made up until the time that purge is first enabled. From that point forward, rich faults can only be detected by turning purge off intrusively. If during this period of time the filtered long-term fuel trim metric exceeds the threshold a fault will be set. In addition to the long-term fuel trim limit, the short-term fuel trim metric can be monitored and the fault sets once both threshold values are exceeded. The short-</p>	<p>Passive Test: The filtered Non-Purge Long Term Fuel Trim metric</p> <p>AND</p> <p>The filtered Short Term Fuel Trim metric (Note: any value above 1.05 effectively nullifies the short-term fuel trim criteria)</p> <p>*****</p>	<p><= 0.700</p> <p><= 1.996</p> <p>*****</p>		<p>Secondary Parameters and Enable Conditions are identical to those for P0171, with the exception that fuel level is not considered.</p>	<p>Frequency: 100 ms Continuous Loop</p>	Type B, 2 Trips
			<p>Intrusive Test: For 3 out of 5 intrusive segments,</p> <p>The filtered Purge Long Term Fuel Trim metric</p> <p>AND</p> <p>The filtered Non-Purge Long Term Fuel Trim metric</p> <p>AND</p> <p>The filtered Short Term Fuel Trim metric (Note: any value above 1.05 effectively nullifies the short-term fuel trim criteria)</p>	<p><= 0.705</p> <p><= 0.700</p> <p><= 1.996</p> <p>If a fault has been detected (by the passive or intrusive test) the long-term fuel trim metric must be > 0.700 and the short-</p>	<p>Purge Vapor Fuel</p>	<p><= 100.00 % (Note: values greater than 50% indicate the Purge Vapor Fuel requirement is not being used)</p>	<p>Segment Definition: Segments can last up to 45 seconds and are separated by the lesser of 12.0 seconds of purge-on time or enough time to purge 11 grams of vapor. A maximum of 5 completed segments or 20 attempts are allowed for each intrusive test. After an intrusive test report is completed, another intrusive test cannot occur for 300 seconds to allow</p>

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
		<p>term fuel trim metric is only monitored on programs that have acceptable emissions when the long-term fuel metric reaches its full authority.</p> <p>Once purge is enabled if the filtered Purge Long Term Fuel Trim metric > 0.705 , the test passes without intrusively checking the filtered Non-Purge Long Term Fuel Trim metric. However if the filtered Purge Long Term Fuel Trim metric is <= 0.705 , the Intrusive test is invoked. The purge is ramped off to determine if excess purge vapor is the cause of the rich condition. If during 3 out of 5 intrusive segments, the filtered Purge Long Term Fuel Trim metric <= 0.700 the fault will set.</p> <p>Performing intrusive tests too frequently may also affect EVAP and EPAIII emissions, and the execution frequency of other diagnostics. This is why the intrusive test is operated over several</p>		<p>term fuel trim metric must be > 0.000 to repass the diagnostic. The intrusive test will be enabled at long-term fuel metric values < 0.70 until the diagnostic repasses after a failure.</p>			<p>sufficient time to purge excess vapors from the canister. During this period, fuel trim will pass if the filtered Purge Long Term Fuel Trim metric > 0.705 for at least 200.0 seconds, indicating that the canister has been purged.</p>

Random Misfire Detected	P0300	These DTC's will determine if a random or a cylinder specific misfire is occurring by monitoring various terms derived from crankshaft velocity. The rate of misfire over an interval is compared to both emissions and catalyst damaging thresholds. The pattern of crankshaft acceleration after the misfire is checked to differentiate between real misfire and other sources of crank shaft noise.	Crankshaft Deceleration Value(s) vs. Engine Speed and Engine load The equation used to calculate deceleration value is tailored to specific vehicle operating conditions. The selection of the equation used is based on the 1st single cylinder continuous misfire threshold tables encountered that are not max of range. If all tables are max of range at a given speed/load, that speed load region is an Undetectable region see Algorithm Description Document for additional details. SINGLE CYLINDER CONTINUOUS MISFIRE((Medres_Decel Medres_Jerk OR (Medres_Decel Medres_Jerk OR (Lores_Decel Lores_Jerk OR (Lores_Decel Lores_Jerk OR RevBalanceTime)	- see details of thresholds on Supporting Tables Tab > IdleSCD_Decel AND > IdleSCD_Jerk OR > SCD_Decel AND > SCD_Jerk) OR > IdleCyl_Decel AND > IdleCyl_Jerk OR > CylModeDecel AND > CylModeJerk) > RevMode_Decel	Engine Run Time Engine Coolant Temp Or If ECT at startup Then ECT System Voltage + Throttle delta - Throttle delta Early Termination option: (used on plug ins that may not have enough engine run time at end of trip for normal interval to complete.)	> 2 crankshaft revolution -12 °C < ECT < 127 °C < -12 °C 21 °C < ECT < 127 °C 9.00 < volts < 32.00 < 100.00 % per 25 ms < 100.00 % per 25 ms Not Enabled	Emission Exceedence = any (5) failed 200 rev blocks out of (16) 200 rev block tests Failure reported for (1) Exceedence in 1st (16) 200 rev block tests, or (4) Exceedences thereafter. OR when Early Termination Reporting = Enabled and engine rev > 1,000 revs and < 3,200 revs at end of trip any Catalyst Exceedence = (1) 200 rev block as data supports for catalyst damage. Crankshaft Position System Variation Not Learned	P0315	This DTC determines if the crankshaft sensor learn values that are stored in memory are valid. The angle between each tooth of the reluctor wheel is learned, and the sum of all angles together should sum to 360° (one revolution of the reluctor wheel). Default values, or corrupted values will not sum to 360°.	The Crankshaft target wheel should be 360 degrees around in circumference. Loss or controller non-volatile memory or an error in memory will cause the values of individual teeth learn to be defaulted or incorrect. Set the DTC if the Difference between the sum of the reluctor wheel's teeth and 360 degrees is greater than:	> 0.001 degrees	OBD Manufacturer Enable Counter	MEC = 0	0.50 seconds Frequency Continuous100 msec	Type A, 1 Trips

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Knock Sensor (KS) Performance Per Cylinder	P0324	This diagnostic checks for knock sensor performance out of the normal expected range on a per cylinder basis due to Excessive Knock (either real or false knock). In the knock detection algorithm, the term "Knock Intensity" (KI) is used to define the relative size of a knock event, and is calculated as (KI = current knock event - knock threshold). This results in a KI amplitude that is proportional to the size of the knock event (as seen by the knock sensor). In addition, Knock Intensity cannot be less than zero as it is forced/limited to be = 0 with no knock detected (i.e. whenever the current knock event < knock threshold, KI = 0). This diagnostic calculates a first-order lag filter version of the Knock Intensity and sets a fault when: (Filtered KI) > (Excessive Knock Diagnostic Threshold)	Filtered Knock Intensity (where 'Knock Intensity' = 0 with no knock; and > 0 & proportional to knock magnitude with knock)	> P0324_PerCyl_ExcessiveKnock_Threshold (no units)	Diagnostic Enabled? Engine Run Time Engine Speed Engine Air Flow Engine Coolant Temperature OR OBD Coolant Enable Criteria Inlet Air Temperature Cumulative Number of Engine Revs Above Min Eng Speed (per key cycle)	Yes ≥ 2.0 seconds ≥ 700 RPM AND ≤ 8,500 RPM ≥ 700 mg/cylinder AND ≤ 2,000 mg/cylinder ≥ -40 deg's C = TRUE ≥ -40 deg's C ≥ 170 revs	First Order Lag Filters with Weight Coefficient = 0.0201 Updated each engine event	Type A, 1 Trips

Knock Sensor (KS) Circuit Bank 1	P0325	<p>This diagnostic checks for an open in the knock sensor circuit Sensor 1/Bank 1</p> <p>There are two possible methods used (20 kHz Method or Normal Noise Method):</p> <p>1. 20 kHz Method: This method injects a 20 kHz signal (internal to the ECU) onto one of the Knock Sensor inputs. For a normal/good circuit the 20 kHz signal will propagate through the Knock sensor and back to the ECU through the sensor return circuit. The 20 kHz signal is processed through the Fast Fourier Transform (FFT) and then filtered with a first-order lag filter. Since the Knock Detection algorithm uses a Differential Op-Amp to compare the input from the two knock sensor wires, the FFT 20 kHz diagnostic signal will have either: A. Low output with a good circuit (because the 20 kHz injected signal is detected on both of the sensor inputs) or</p>	<p>Open Circuit Method chosen (2 possible methods: 20 kHz or Normal Noise):</p> <p>Filtered FFT Output</p> <p>Filtered FFT Output</p>	<p>= P0325_P0330_OpenMethod_2 (supporting table)</p> <p>Case 1 (20 kHz Method):</p> <p>> P0325_P0330_OpenCktThrshMin (20 kHz) AND < P0325_P0330_OpenCktThrshMax (20 kHz)</p> <p>Case 2 (Normal Noise Method):</p> <p>> P0325_P0330_OpenCktThrshMin (Normal Noise) AND < P0325_P0330_OpenCktThrshMax (Normal Noise)</p>	<p>Diagnostic Enabled?</p> <p>Engine Run Time</p> <p>Engine Speed</p> <p>Cumulative Number of Engine Revs (per key cycle) within min/max Engine Speed enable (above)</p> <p>Engine Air Flow</p> <p>Engine Coolant Temperature OR OBD Coolant Enable Criteria</p> <p>Inlet Air Temperature</p>	<p>Yes</p> <p>≥ 2.0 seconds</p> <p>≥ 1,000 RPM and ≤ 4,650 RPM</p> <p>≥ 100 revs</p> <p>≥ 40 mg/cylinder and ≤ 2,000 mg/cylinder</p> <p>≥ -40 deg's C</p> <p>= TRUE</p> <p>≥ -40 deg's C</p>	<p>First Order Lag Filter with Weight Coefficient</p> <p>Weight Coefficient = 0.0100</p> <p>Updated each engine event</p>	Type A, 1 Trips

		<p>B, High output for an Open Circuit (because the 20 kHz injected signal is detected only on one of the sensor inputs). The 20 kHz method is typically used for the entire operating region of the engine. However, some engines may not have adequate separation between good and bad circuits at high engine speed. In these cases the 20 kHz method is used at low and medium engine speeds, and the "Normal Noise" method is used at high engine speed only.</p> <p>2. Normal Noise: The Normal Noise method monitors the background engine noise level for a selected frequency range output of the knock detection FFT. The background noise (i.e. Normal Noise) is filtered with a first-order lag filter. A good circuit is determined when the filtered Normal Noise signal is greater than the threshold. See Supporting Tables for method definition: P0325 P0330 OpenM</p>

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Knock Sensor (KS) Performance Bank 1	P0326	This diagnostic checks for knock sensor performance out of the normal expected range, on a per sensor basis. This diagnostic is specifically designed to identify the fault condition where the knock sensor is properly attached electrically, but produces an Abnormally low output due to being unattached (or loosely attached) with the the mounting bolt (and thus unable to properly transfer the engine vibration energy from the engine block to the knock sensor). The term "Abnormal (engine) Noise" is used to define this diagnostic method. A fault condition is identified when a first-order lag filtered version of the Abnormal Noise signal falls below the diagnostic threshold.	Filtered FFT Intensity: (where 'FFT Intensity' = Non-knocking, background engine noise)	< P0326_P0331_AbnormalNoise_Threshold (Supporting Table)	Diagnostic Enabled? Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
EVAP System Small Leak Detected (ELCP Sealed Fuel System)	P0442	A small leak (≥ 0.020 ") is detected in the EVAP system between the fuel cap, purge solenoid, and diurnal control valve (DCV).The ELCP vacuum pump creates a vacuum across a 0.020" reference orifice. This reference vacuum is then compared to the vacuum level created in the fuel tank to determine if a leak exists. The diagnostic has fast pass capability. If the Fuel Tank Pressure (FTP) sensor measures a fuel tank system pressure greater than 1,276 Pa or a fuel tank system vacuum greater than -1,278 Pa then both the small leak and large leak diagnostics pass without using the ELCP vacuum pump.	If the ELCP pressure sensor (gauge) vacuum reading is less than the 2nd 0.020" reference orifice vacuum measurement for then the fuel tank system has a small leak and the DTC fails.	400 seconds	Propulsion system not active time Distance since assembly plant Drive distance Min baro Max baro Min fuel level Max fuel level ECT Min IAT Max IAT Time since last test when passing P0442/P0455 Time since last test when failing P0442/P0455 ***** ELCP hardware can be powered by battery or powertrain relay. 17 OBDG01 ECM Summary Tables (Initial DTCs)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
EVAP System Large Leak Detected (ELCP Sealed Fuel System)	P0455	A large leak (>> 0.020") is detected in the EVAP system between the fuel cap, purge solenoid, and diurnal control valve (DCV) after a refueling event has been detected. The ELCP vacuum pump creates a vacuum across a 0.020" reference orifice. This reference vacuum is then compared to the vacuum level created in the fuel tank to determine if a leak exists. The diagnostic has fast pass capability. If the Fuel Tank Pressure (FTP) sensor measures a fuel tank system pressure greater than 1,276 Pa or a fuel tank system vacuum greater than -1,278 Pa then both the small leak and large leak diagnostics pass without using the ELCP vacuum pump. The Fast Pass Full Test Sequence is conducted on the 0th consecutive fast pass. All other times, the Fast Pass Reduced Test Sequence is conducted to conserve battery state of charge. The Fast Pass Reduced	After a refueling event has been detected and the small/large leak diagnostics have not passed. A refueling event is detected when there is a fuel level increase $\geq 10\%$ for ≥ 5 seconds. If the ELCP pressure sensor (gauge) vacuum reading is less than the 2nd 0.020" reference orifice vacuum measurement times a for then the fuel tank system has a large leak and the DTC fails.	0.20 multiplier 400 seconds	Propulsion system not active time Distance since assembly plant Drive distance Min baro Max baro Min fuel level Max fuel level ECT Min IAT Max IAT Time since last test when passing P0442/P0455 Time since last test when failing P0442/P0455 ***** ELCP hardware can be powered by battery or powertrain relay. 		<p>EVAP leak check vacuum result did not reach the 2nd reference vacuum measurement then the large leak diagnostic failure condition is evaluated. The large leak diagnostic pass/fail decision is then based on comparing the EVAP leak check vacuum result to the large leak threshold.</p> <p>The large leak threshold is calculated by applying a factor to the 2nd reference vacuum measurement. If the EVAP leak check vacuum result is less than the large leak threshold then P0455 is considered failing. The large leak diagnostic will be considered passing if the EVAP leak check vacuum result is greater than or equal to the large leak threshold.</p> <p>As with the small leak diagnostic, the DTC reporting for the large leak diagnostic does not occur until the rest of the sections (2nd reference orifice check and final check sections) successfully</p>						

17 OBDG01 ECM Summary Tables (Initial DTCs)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
		<p>complete. Until this occurs, results are temporary stored in VeELCR_e_LargeLeak Fault.</p> <p>With the ELCP leak check hardware it is difficult to distinguish between leak sizes greater than 0.040". A 0.040" leak will generate a vacuum result around 7-12% of the 1st reference vacuum measurement. A 0.090" leak will generate a vacuum result around 0-4% of the 1st reference vacuum measurement.</p> <p>Based on an agreement with CARB, the large leak diagnostic will only be used when a prior refueling event has occurred. The most likely time the fuel cap will be loose or left off is after a refueling event. The large leak diagnostic also has the CARB approved capability of extinguishing the MIL after 1 pass since the "tighten fuel cap" message is supported.</p>

		<p>there is then a period of time to allow pressure or vacuum in the fuel tank to reach normal operating levels with purge enabled. This time period is based on whether there is pressure or vacuum in the fuel tank initially as indicated by the FTP sensor.</p> <p>If there is vacuum in the fuel tank then the DCV will already be open and this stabilization period will allow for high levels of vacuum to bleed down before starting the purge flow check. If there is pressure in the fuel tank then the DCV will be closed and this stabilization period will allow time to purge the fuel tank of pressure before opening the DCV. After the pressure stabilization period ends, the DCV will be commanded open to run the purge flow check even if there is still pressure in the fuel tank.</p> <p>There is a calibratable option that prevents autostop and DFCO from occurring above a</p>

		<p>vehicle speed once the stabilization period is complete. If the vehicle speed drops below this calibration then autostop and DFCO are allowed. Using this option may provide more opportunity to complete the diagnostic quicker.</p> <p>When the stabilization period is complete, the ELCP switching valve is moved to the pump position allowing the ELCP pressure sensor to have communication with the fuel tank. A short time later a reading from the ELCP pressure sensor is taken which represents the initial pressure value.</p> <p>The ELCP pressure sensor is then continuously monitored and compared to the initial pressure value. If the difference is greater than a threshold calibration then purge flow is considered to be present and the ELCP switching valve is moved to the vent position.</p> <p>A pass for P0497 is not</p>

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
			Indicates that the primary processor detects an illegal write attempt to protected RAM. Number of illegal writes are >	65,534 counts			Diagnostic runs continuously (background loop)	
			Indicates that the secondary processor is unable to correctly read data from or write data to system RAM. Detects data read does not match data written >=	5 counts			Will finish first memory scan within 30 seconds at all engine conditions - diagnostic runs continuously (background loop)	

17 OBDG01 ECM Summary Tables (Initial DTCs)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Internal ECM Processor Integrity Fault	P0606	Indicates that the ECM has detected an internal processor integrity fault. These include diagnostics done on the SPI Communication as well as a host of diagnostics for both the primary and secondary processors.	Loss or invalid message of SPI communication from the Secondary Processor at initialization detected by the Primary Processor or loss or invalid message of SPI communication from the Secondary Processor after a valid message was received by the Primary Processor	Loss or invalid message at initialization detected or loss or invalid message after a valid message was received		Run/Crank voltage >= 6.41 or Run/Crank voltage >= 11.00 , else the failure will be reported for all conditions	In the primary processor, 159 / 399 counts intermittent or 39 counts continuous; 39 counts continuous @ initialization. 12.5 ms /count in the ECM main processor	Type A, 1 Trips
			Loss or invalid message of SPI communication from the Primary Processor at initialization detected by the Secondary Processor or loss or invalid message of SPI communication from the Primary Processor after a valid message was received by the Secondary Processor	Loss or invalid message at initialization detected or loss or invalid message after a valid message was received		In the secondary processor, 20 / 200 counts intermittent or 0.1875 s continuous; 0.4750 s continuous @ initialization. 12.5 ms /count in the ECM secondary processor		
			Checks for stack over or underflow in secondary processor by looking for corruption of known pattern at stack boundaries. Checks number of stack over/ under flow since last powerup reset >=	5		KeMEMD_b_StackLimitTestEnbl == 1 Value of KeMEMD_b_StackLimitTestEnbl is: 1 . (If 0, this test is disabled)	variable, depends on length of time to corrupt stack	
			MAIN processor is verified by responding to a seed sent from the secondary with a key response to secondary. Checks number of incorrect keys	2 incorrect seeds within 8 messages, 0.2000 seconds		ignition in Run or Crank	150 ms for one seed continually failing	

17 OBDG01 ECM Summary Tables (Initial DTCs)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
			received > or Secondary processor has not received a new within time limit					
			Time new seed not received exceeded			always running	0.450 seconds	
			MAIN processor receives seed in wrong order			always running	3 / 17 counts intermittent. 50 ms/count in the ECM main processor	
			2 fails in a row in the Secondary processor's ALU check			KePISD_b_ALU_TestEnbl d == 1 Value of KePISD_b_ALU_TestEnbl d is: 1. (If 0, this test is disabled)	25 ms	
			2 fails in a row in the Secondary processor's configuration register masks versus known good data			KePISD_b_ConfigRegTes tEnbl d == 1 Value of KePISD_b_ConfigRegTes tEnbl d is: 1. (If 0, this test is disabled)	12.5 to 25 ms	
			Secondary processor detects an error in the toggling of a hardware discrete line controlled by the MAIN processor: number of discrete changes > = or < = over time window(50ms)	7 17		KePISD_b_MainCPU_SO H_FltEnbl d == 1 Value of KePISD_b_MainCPU_SO H_FltEnbl d is: 0 . (If 0, this test is disabled) time from initialization >= 0.4875 seconds	50 ms	
			Software background task first pass time to complete exceeds			Run/Crank voltage > 6.41	360.000 seconds	

17 OBDG01 ECM Summary Tables (Initial DTCs)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
			2 fails in a row in the MAIN processor's ALU check			KePISD_b_ALU_TestEnbl d == 1 Value of KePISD_b_ALU_TestEnbl d is: 1. (If 0, this test is disabled)	25 ms	
			2 fails in a row in the MAIN processor's configuration register masks versus known good data			KePISD_b_ConfigRegTestEnbl == 1 Value of KePISD_b_ConfigRegTestEnbl is: 1. (If 0, this test is disabled)	12.5 to 25 ms	
			Checks number of stack over/under flow since last powerup reset >=	3		KeMEMD_b_StackLimitTestEnbl == 1 Value of KeMEMD_b_StackLimitTestEnbl is: 1. (If 0, this test is disabled)	variable, depends on length of time to corrupt stack	
			Voltage deviation >	0.4950		KePISD_b_A2D_CnvtrTestEnbl == 1 Value of KePISD_b_A2D_CnvtrTestEnbl is: 1. (If 0, this test is disabled)	5 / 10 counts or 0.150 seconds continuous; 50 ms/count in the ECM main processor	
			Checks for ECC (error correcting code) circuit test errors reported by the hardware for flash memory. Increments counter during controller initialization if ECC error occurred since last controller initialization. Counter >=	3 (results in MIL), 5 (results in MIL and remedial action)		KeMEMD_b_FlashECC_CktTestEnbl == 1 Value of KeMEMD_b_FlashECC_CktTestEnbl is: 1. (If 0, this test is disabled)	variable, depends on length of time to access flash with corrupted memory	
			Checks for ECC (error	3 (results in MIL),		KeMEMD_b_RAM_ECC_	variable,

Two Stage Oil Pump Control Circuit StuckOn - Two Sided	P06DE	<p>Diagnoses the two stage oil pump is stuck in the low pressure state. This diagnostic includes an intrusive test and a passive test.</p> <p>Intrusive test: The oil pump control is cycled off (high pressure) and on (low pressure) Y times at calibratable intervals. If a change in oil pressure above a calibration is not detected then the oil pressure is checked to determine if it is stuck. It takes X-out-of-Y failures to fail and set the appropriate code.</p> <p>Passive test: After the intrusive test passes, then a passive test will begin to run. The passive test will monitor the oil pressure changes associated with oil pump control state changes. If the passive test determines that the oil pressure change was less then desired then the intrusive test is retrigged.</p>	<p><u>Fail from a passing state:</u></p> <p>Oil Pressure delta is less than a minimum delta pressure on a state change and the measured filtered oil pressure is below a threshold</p>	<p>Oil Pressure delta = ABS [Filtered Oil Pressure at beginning of state change - filtered oil pressure after 1.0 seconds]</p> <p>Oil Pressure delta < P06DD_P06DE_OP_StateChangeMin (see P06DE details on Supporting Tables Tab)</p> <p>Filtered Oil Pressure ≤ P0521_P06DD_P06DE_OP_HiStatePressure (re - P06DD_P06DE_OP_LoStatePressure) ÷ 2 (see P06DE details on Supporting Tables Tab)</p>	<p><u>Common Criteria:</u></p> <p>Two Stage Oil Pump is Present</p> <p>Engine Running</p> <p>Ambient Air Pressure</p> <p>Oil Aeration (= TRUE if engine speed > 10,000 RPM for longer than 30.0 seconds)</p> <p>No active DTC's for diagnosis enable:</p> <p>Check oil pump TFTKO as a diagnostic enable when Enabled.</p> <p>No active DTC's for control enable:</p> <p><u>Active Criteria:</u> One Sided Performance</p>	<p>TRUE</p> <p>≥ 10.0 seconds</p> <p>≥ 70.0 kPa</p> <p>FALSE</p> <p>Fault bundles: MAF_SensorFA ECT_Sensor_FA IAT_SensorFA CrankSensor_FA EngOilPressureSensorCktFA AmbientAirDefault EngOilTempFA</p> <p>Enabled : OilPmpTFTKO</p> <p>Enabled Fault bundles for control disable : OilPmpTFTKO EngineTorqueEstInaccurate EngOilPressureSensorFA PowertrainRelayFault CrankSensor_FA EngOilTempFA</p> <p>Disabled</p>	<p>≥ 12 errors out of 15 samples.</p> <p>Run once per trip or activated by the Passive Test</p>	Type A, 1 Trips

Component/System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Control Module Wake-up Circuit Performance Diagnostic (ELCP Sealed/Vented Fuel System)	P06E4	<p>VICM Wake-up events were not received</p> <p>The ELCP EVAP diagnostics with propulsion system off will run many hours after the vehicle has been shut off when the EVAP system is in a stable condition. Since the ECM does not have the capability to wake itself up, a Vehicle Interface Control Module (VICM) is used to wake up the ECM at predetermined intervals to run the EVAP diagnostics.</p> <p>When the propulsion system transitions to off an alarm request is sent to the VICM. After that period of time has elapsed the VICM alarm clock wakes up the ECM. The ECM then requests another wake up and checks the diagnostic enable conditions. If the enable conditions are met and the EVAP diagnostics are able to complete then the future wake up request will be canceled at the next opportunity when there is communication</p>	<p>Whenever the propulsion system goes active, the diagnostic reads its internal timer and evaluates the results from the wake-up events that could have occurred. For each wake-up event the status can be: Pass – the wake-up event occurred within a window Indeterminate – the ECM was already awake at the time the wake-up event could have occurred Fail – the wake-up event occurred outside a window or did not occur at all</p> <p>If the 5.0 hour wake-up event did not occur from to then a failure has occurred.</p> <p>If the 7.0 hour wake-up event did not occur from to then a failure has occurred.</p> <p>If the 9.5 hour wake-up event did not occur from to then a failure has occurred.</p> <p>At Propulsion System Active, if any of the wake-up events indicate a</p>	<p>4.3 hours 5.8 hours</p> <p>6.0 hours 8.1 hours</p> <p>8.2 hours 11.0 hours</p>	<p>Distance since assembly plant Drive distance Time since last test when passing P0442/P0455 Time since last test when failing P0442/P0455</p> <p>No Active DTC's</p>	<p>≥ 9.9 miles ≥ 0.1 miles</p> <p>≥ 0 hours</p> <p>≥ 0 hours</p> <p>VehicleSpeedSensor_FA ModuleOffTime_FA LostCommBusB_VICM_FA A CommBusAOff_VICM_FA CommBusBOff_VICM_FA AccCktLo_FA</p>	<p>Once per each wake-up event when Propulsion System is not active</p> <p>Final decision is made when Propulsion System is Active</p> <p>100 msec loop</p>	Type B, 2 Trips

		<p>between the VICM and ECM. If the enable conditions are not met then the ECM will go back to sleep and wait for the next wake up to try and run the EVAP diagnostics. There are a total of three wake ups that the ECM can request until there is another transition from propulsion system on to off.</p> <p>This diagnostic indicates if the wake up (s) occurred at the proper requested time (s). A pass will be reported if a wake up occurred at the proper time. A failure will be reported if no wake up occurred, or if a wake up occurred at the incorrect time. The DTC will be indeterminate if the ECM was already awake in a valid window for some reason other than a VICM wake up.</p>	failure then the DTC fails.

Fuel Pump Driver Control Module Signal Message Counter Incorrect	P129E	To detect if the command message received as serial data from the engine control module is valid The "rolling count check" value is created by adding an appended hexadecimal calculation to the pump duty cycle command value. In order to achieve a desired fuel pressure, a hexadecimal equivalent value representing the necessary fuel pump current pulse "On" time (duty cycle as a percent value) is transmitted to the FPPM. The corresponding "check" value is transmitted as well. At the FPPM, the received duty cycle command value is used to create an expected "rolling count" value using the same calculation method as the ECM. The expected "rolling count" value calculated at the receiving power module (smart device) is compared to the transmitted "rolling count" value. If these do not match, a fault condition is reported	FPPM Received Duty Cycle Rolling Count	<> Transmitted Duty Cycle Rolling Count (ECM) (Fu Pmp Pwr Mod smart device reports Faulted, Not Faulted or Indeterminate test state)	a) FPPM configuration KeFRPR_e_ChassisFuel PresSysType b) Fault state determination enabled c) FPPM Received Duty Cycle Count result d) FPPM Diagnostic feedback received e) CAN communication f) System Voltage	a) == CeFRPR_e_ECM_FPPM_Sys b) == TRUE c) == Valid d) == TRUE e) == Valid f) 9v < Sys Voltage > 32v	64 failures / 80 samples 1 sample / 12.5 millisec	Type B, 2 Trips

Evaporative Emission System Leak Detection Pump Stuck On (ELCP Sealed Fuel System)	P145D	This DTC detects an ELCP vacuum pump that is stuck on. Ambient check section For the ELCP vacuum pump stuck on test, the ELCP vacuum pump is off, the DCV is closed, and the ELCP switching valve is moved from the vent to pump position half way through the test. Utilizing the switching valve allows for proper fault detection whether the ELCP vacuum pump is stuck on before or after the ECM is awake. The ELCP vacuum pump stuck on test is performed by comparing an initial ELCP pressure sensor reading to a second reading after the ELCP switching valve is moved from the vent to pump position. The ELCP switching valve is moved back to the vent position after the second pressure sensor reading is taken. A large difference between the two pressure sensor	The 1st time in the test sequence when the ELCP vacuum pump is commanded off, after the ELCP switching valve transitions from vent to pump position, if the difference between an initial ELCP pressure sensor (absolute) reading and a second ELCP pressure sensor (absolute) reading is after then the ELCP vacuum pump is stuck on and the DTC fails. The 2nd time in the test sequence when the ELCP vacuum pump is commanded off, if the ELCP pressure sensor (gauge) vacuum reading is after then the ELCP vacuum pump is stuck on and the DTC fails.	 > 1,000 Pa 8 seconds > 1,180 Pa 14 seconds	Propulsion system not active time Distance since assembly plant Drive distance Min baro Max baro Min fuel level Max fuel level ECT Min IAT Max IAT Time since last test when passing P0442/P0455 Time since last test when failing P0442/P0455 ***** ELCP hardware can be powered by battery or powertrain relay. 		measurements. Large differences between these measurements will fail the reference orifice performance diagnostic (P145F).						

17 OBDG01 ECM Summary Tables (Initial DTCs)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Evaporative System Leak Detection Reference Orifice Flow Erratic (ELCP Sealed Fuel System)	P1462	0.020" reference orifice vacuum measurement is erratic. When the ELCP vacuum pump is on and the ELCP switching valve is in the vent position, the ELCP pressure sensor measures the absolute pressure between the ELCP vacuum pump and the reference orifice. A short period of time before the tests ends an averaged ELCP pressure sensor (absolute) measurement is captured and compared to a final averaged ELCP pressure sensor (absolute) measurement. Large differences between the two values indicates that a stabilized vacuum measurement did not occur and a failure is detected. The vacuum measurements are considered erratic.	While performing 1st 0.020" reference orifice vacuum measurement for or 2nd 0.020" reference orifice vacuum measurement for If the absolute value of the difference between the averaged ELCP pressure sensor (absolute) reading starting before the end of the reference measurement and the final averaged ELCP pressure sensor (absolute) reading is then a stabilized 0.020" reference orifice vacuum measurement could not be obtained and the DTC fails.	360 seconds 30 seconds 3 second 10 seconds 3 second > 220 Pa	Propulsion system not active time Distance since assembly plant Drive distance Min baro Max baro Min fuel level Max fuel level ECT Min IAT Max IAT Time since last test when passing P0442/P0455 Time since last test when failing P0442/P0455 ***** ELCP hardware can be powered by battery or powertrain relay. Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
		<p>there is communication between the VICM and ECM. If the enable conditions are not met then the ECM will go back to sleep and wait for the next wake up to try and run the EVAP diagnostics. There are a total of three wake ups that the ECM can request until there is another transition from propulsion system on to off.</p> <p>This diagnostic indicates if the ECM received feedback from the VICM after a wake up request was made. A pass will be reported if feedback was received. A failure will be reported if no wake up occurred and no feedback was received. The DTC will be indeterminate if feedback was not received, but a VICM wake up occurred or the ECM was already awake in a valid window for some reason other than a VICM wake up.</p>	<p>At Propulsion System Active, if any of the wake-up events indicate a failure then the DTC fails.</p>					

17 OBDG01 ECM Summary Tables (Initial DTCs)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Internal Control Module SIDI High Pressure Pump current monitor	P163A	This DTC Diagnoses the current from the control area and compares it with calibrated thresholds to set current high and low flags	SIDI fuel pump High Current Test Current SIDI fuel pump Low Current Test Current	>= 11.00 Amps <= 0.10 Amps	Battery Voltage Low Side Fuel Pressure Engine Run Time Additional Enable Conditions: All must be true (High Pressure Pump is enabled and High Fuel pressure sensor ckt is Not (FA,FP or TFTKO) and High Pressure fuel pump ckt is Not (FA,FP or TFTKO) and Cam or Crank Sensor Not FA and IAT,IAT2,ECT Not FA and Low side Fuel Pump Relay ckt Not FA and Estimate fuel rail pressure is valid and Green Engine (In assembly plant) is not enabled and Not if low fuel condition and Low side Fuel Pump is on and Injector Flow Test is not active and Device control commanded pressure is false and Device control pump ckt enabled on is false and Engine movement	>= 11 Volts > 0.300 MPa >= P0089 - P163A - P228C - P228D - P0191 - Engine run time threshold to Enable Diagnostic (see supporting tables) Enabled when a code clear is not active or not exiting device control Engine is not cranking	Current High - 750 failures out of 938 samples Current Low - 750 failures out of 938 Samples 4 samples per engine rotaion	Type B, 2 Trips

If these two temperature values differ by a large enough amount, the Intake Air Temperature 1 / 2 Correlation Diagnostic will fail.</p> <p>This diagnostic is enabled if the Powertrain Relay voltage is high enough.</p>	ABS (IAT - IAT2)	> 55.0 deg C	<p>Powertrain Relay Voltage for a time</p> <p>No Active DTCs:</p>	<p>>= 11.0 Volts >= 0.9 seconds</p> <p>PowertrainRelayFault</p>	<p>40 failures out of 50 samples</p> <p>1 sample every 100 msec</p>	Type B, 2 Trips

17 OBDG01 ECM Summary Tables (Initial DTCs)

Component/System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.	
Bank 1 Air-Fuel Ratio Imbalance	P219A	<p>This monitor determines if there is an Air Fuel Imbalance in the fueling system for a cylinder on a Bank 1. Detection is based on a the pre catalyst oxygen sensor voltage. The pre catalyst O2 voltage is used to generate a variance metric that represents the statistical variation of the O2 sensor voltage over a given engine cycle. This metric is proportional to the air-fuel ratio imbalance (variance is higher with an imbalance than without).</p> <p>The observed Variance is dependent on engine speed and load and is normalized by comparing it to a known "good system" result for that speed and load, and generating a Ratio metric.</p> <p>The Ratio metric is calculated by selecting the appropriate threshold calibration from a 17x17 table (see Supporting Table</p>	<p>Filtered Ratio ></p> <p>The Ratio metric is calculated by selecting the appropriate threshold calibration from a 17x17 table (see Supporting Table</p> <p>P219A Variance Threshold Bank1 Table) and subtracting it from the measured Variance. The result is then divided by a normalizer calibration from another 17 x 17 table (see Supporting Table</p> <p>P219A Normalizer Bank1 Table). This quotient is then multiplied by a quality factor calibration from a 17 x 17 table (see Supporting Table</p> <p>P219A Quality Factor Bank1 Table). This result is referred to as the Ratio. Note that the quality factor ranges between 0 and 1 and represents robustness to false diagnosis in the current operating region. Regions with low quality factors are not used.</p>	0.60	<p>If the diagnostic has reported a failure on the prior trip, the Filtered Ratio must fall below 0.51 in order to report a pass. This feature prevents the diagnostic from toggling between failing and passing when the Filtered Ratio remains near the initial failure threshold of 0.60 .</p>	<p>System Voltage</p> <p>Fuel Level</p> <p>Engine Coolant Temperature</p> <p>Cumulative engine run time</p> <p>Diagnostic enabled at Idle (regardless of other operating conditions)</p> <p>Engine speed range</p> <p>Engine speed delta during a short term sample period</p> <p>Mass Airflow (MAF) range</p> <p>Cumulative delta MAF during a short term sample period</p> <p>Filtered MAF delta between samples Note: first order lag filter coefficient applied to MAF = 0.050</p> <p>Air Per Cylinder (APC)</p> <p>APC delta during short term sample period</p>	<p>no lower than 10.0 Volts for more than 0.2 seconds</p> <p>> 10.0 percent AND no fuel level sensor fault</p> <p>> -20 deg. C (or OBD Coolant Enable Criteria = TRUE)</p> <p>> 0.0 seconds</p> <p>No</p> <p>800 to 10,000 RPM</p> <p>< 1,000 RPM</p> <p>0 to 1,000 g/s</p> <p>< 1,000 g/s</p> <p>< 1,000.00 g/s</p> <p>100 to 1,200 mg/cylinder</p> <p>< 1,000 mg/cylinder</p>	<p>Minimum of 1 test per trip, up to 8 tests per trip during RSR or FIR.</p> <p>The front O2 sensor voltage is sampled once per cylinder event. Therefore, the time required to complete a single test (when all enable conditions are met) decreases as engine speed increases. For example, 41.40 seconds of data is required at 1000 rpm while double this time is required at 500 rpm and half this time is required at 2000 rpm. This data is collected only when enable conditions are met, and as such significantly more operating time is required than is indicated above. Generally, a report will be</p>	Type A, 1 Trips

17 OBDG01 Estimated OAT Accurate

Conditions for Estimated Ambient Temperature Using OAT Sensor to be Valid

1. Startup OAT is less than previous trip EAT

OR

2. Startup ECT - previous trip EAT $\leq 0^{\circ}\text{C}$

OR

3. Engine off time $\geq 7,200$ seconds

OR

4. At startup, time since previous EAT valid and able to learn $\leq 3,600$ seconds

OR

5. EAT - current OAT $0^{\circ}\text{C} \leq \text{difference} \leq 2^{\circ}\text{C}$

OR

6. EAT < current OAT

and speed timer ≥ 240 seconds

and current OAT - EAT $\leq 2^{\circ}\text{C}$

Speed timer increments at 100 msec rate and increments vary based on vehicle speed as follows:

vehicle speed < 10 mph - 2.0 seconds

10 mph < speed < 35 mph 1.00 seconds

35 mph < speed < 124 2.00 seconds

124 mph < speed < 124 2.00 seconds

Speed timer can never be less than 0 seconds

17 OBDG01 OBD Coolant Enable Criteria

OBD Coolant enable

Starting in 11.15A software GM has created a coordinated signal within the ECM that serves as a master enable for diagnostics/controls that use coolant as an enable condition. Controls and diagnostics may choose to enable prior to this calculated signal, but calibrating beyond the OBD limit will not function because of this signal. This enable condition is also put on the CAN bus for other modules to consume as well.

KeTHMG_b_elecstatequipd = 1 for this application

For mechanical thermostat applications (KeTHMG_b_elecstatequipd = 0)

OBD Coolant Enable Temp = P0128 Primary target temp – Calibratable offset (0-32) – 1

OBD Coolant Enable Temp = 81 - 0.0 – 1

OBD Coolant Enable Temp = 80.0

For E-stat applications (KeTHMG_b_elecstatequipd = 1)

OBD Coolant Enable Temp = Max(Min(ECT Control Temp) – Primary Warm up delta, Min primary P0128 target) – Calibratable offset (0-32) – 1

OBD Coolant Enable Temp = Max(Min(KaTHMC_T_TMS_EngCoolReq) - KaECTR_T_CTR_WrmUpDeltaTemp[0], KaECTR_T_CTR_WrmUpTargetMin[0]) - KeECTR_T_CTR_GlbMinOffst – 1

OBD Coolant Enable Temp = Max(85.0 - 11, 81) - 0.0 – 1

OBD Coolant Enable Temp = 73.0

17 OBDG01 MEM FNA Matched Flag

MEMR FNA Matched Flag

GM software maintains a flag that indicates when an ECU has been programmed. When the controller is powered on, the logic compares the application software and calibration data file part numbers and design level suffixes (DLS) that are programmed into ECU flash memory to the part number and DLS data stored in ECU non-volatile memory. If any difference in the part number or DLS values are found, the MEMR_FNA_Matched flag is set to FALSE, otherwise the flag is set to TRUE.

Engine Running

17 OBDG01 DFCO Conditions

DFCO Enable Conditions

COOLANT ENABLE CRITERIA

Coolant temperature < **DFCO_CoolEnblHi_Temp** °C See Supporting Table

RUN TIME ENABLE CRITERIA

Engine run time > **DFCO_DelayAfterStart_Time** seconds See Supporting Table

ENGINE SPEED ENABLE CRITERIA

TORQUE CONVERTER CLUTCH UNLOCK

POPD OFF:

- i) enabled when engine speed > (1,400.0 + supporting table value **DFCO_EngSpdEnblOfst**)
- ii) once enabled continue to be enabled until engine speed < (1,400.0 + supporting table value **DFCO_EngSpdEnblOfst**)

POPD ON:

- i) enabled when engine speed > (1,400.0 + supporting table value **DFCO_EngSpdEnblOfst**)
- ii) once enabled continue to be enabled until engine speed < (1,400.0 + supporting table value **DFCO_EngSpdEnblOfst**)

TORQUE CONVERTER CLUTCH LOCK

POPD OFF:

- i) enabled when engine speed > (1,000.0 + supporting table value **DFCO_EngSpdEnblOfst**)
- ii) once enabled continue to be enabled until engine speed < (900.0 + supporting table value **DFCO_EngSpdEnblOfst**)

POPD ON:

- i) enabled when engine speed > (1,200.0 + supporting table value **DFCO_EngSpdEnblOfst**)
- ii) once enabled continue to be enabled until engine speed < (1,100.0 + supporting table value **DFCO_EngSpdEnblOfst**)

VEHICLE SPEED CRITERIA:

- i) enabled when vehicle speed \geq (**DFCO_EnblHi_Vehicle_Speed**)
- ii) once enabled continue to be enabled until vehicle speed < **DFCO_DsblLo_Vehicle_Speed**

TORQUE CRITERIA :

i) enabled when following AND conditions satisfied

- a) driver raw trq delta = raw torque - zero pedal torque \leq 65,535.0
- b) driver shaped trq delta1 = shaped immediate torque - zero pedal torque \leq 1.0
- c) driver shaped trq delta2 = shaped predicted torque - minimum combustion unmanaged torque = 65,535.0
- d) driver shaped trq delta3 = shaped immediate torque - minimum combustion managed torque \leq 65,535.0

ii) once enabled, disabled when following OR conditions are satisfied

- a) driver raw trq delta1 = raw torque - zero pedal torque > 5.0
- b) driver shaped trq delta2 = zero pedal torque - minimum combustion managed torque > 65,535.0

CATALYST TEMPERATURE

i) enabled based on following AND criteria

- a) (CatTemp < 970.0 °C and vehicle speed < 50.0 kph)
- b) CatTemp < 1,200.0 °C
- c) CatTemp \geq 50.0 °C

17 OBDG01 DFCO Conditions

d) CatalystWarmupEnabled = FALSE

ii) once enabled, disabled when following OR conditions are met

OTHER CONDITIONS:

a) Transmission is not about to unlock

b) Engine not about to stall

c) Transmission is not shifting if already not in DFCO

d) POPD or EOSD

1) POPD requesting DFCO or neither requesting DFCO OFF nor inhibit DFCO

2) EOSD not active

e) EVAP does not inhibit DFCO

f) O2 response test is not inhibiting DFCO event

g) Throttle is not in default mode

Initial Supporting table - Multiple DTC Use - Block learn cells to enable Post oxygen sensor tests

Description: This table describes the adaptive (Block Learn) cells in which to enable the Post (Secondary) Oxygen sensor response tests.
 Note: When the table column heading matches the calibration value below it, that individual cell is enabled.

The cell numbers in the table are defined as:
 CeFADR_e_Cell00_PurgOnAirMode5 = 0,
 CeFADR_e_Cell01_PurgOnAirMode4 = 1,
 CeFADR_e_Cell02_PurgOnAirMode3 = 2,
 CeFADR_e_Cell03_PurgOnAirMode2 = 3,
 CeFADR_e_Cell04_PurgOnAirMode1 = 4,
 CeFADR_e_Cell05_PurgOnAirMode0 = 5,
 CeFADR_e_Cell06_PurgOnIdle = 6,
 CeFADR_e_Cell07_PurgOnDecel = 7,
 CeFADR_e_Cell08_PurgOffAirMode5 = 8,
 CeFADR_e_Cell09_PurgOffAirMode4 = 9,

Initial Supporting table - Multiple DTC Use_Green Sensor Delay Criteria - Limit

Description: This Calibration is the accumulated airflow limit above which the Green condition is expired
 Used for: P0133, P013A, P013B, P013C, P013D, P013E, P013F, P014A, P014B, P0153, P015A, P015B, P015C, P015D, P1133, P1153, P2270, P2271, P2272 and P2273.
 Note: This feature is only enabled when the vehicle is new and cannot be enabled in service.

Value Units: Grams
X Unit: Accumulated Engine Airflow

y/x	CiOXYR_O2_Bank1_Sensor1	CiOXYR_O2_Bank1_Sensor2	CiOXYR_O2_Bank2_Sensor1	CiOXYR_O2_Bank2_Sensor2
1	120,000	120,000	120,000	120,000

17 OBDG01

Initial Supporting table - P0011_CamPosErrorLimlc1

Description: Maximum Intake Cam 1 phase error as a function of engine speed and engine oil temperature.

Value Units: Maximum Intake Cam 1 phase error (degCAM)

X Unit: Engine Oil Temperature (degC)

Y Units: Engine Speed (rpm)

17 OBDG01

Initial Supporting table - P0401_SamplesAfterReset

Description: Total number of samples allowed after a reset. A greater number of samples allows the EWMA logic to make a decision sooner after a reset. Also used as the threshold of total sample counts above which a test can be considered complete for a particular trip. This is a function of barometric pressure to allow compliant response at different altitudes.

Value Units: Total number of samples allowed after a reset (samples)

X Unit: Barometric pressure (kPa)

y/x	65	70	75	80	85	90	95	100	105
1	20	20	20	15	10	10	10	10	10

17 OBDG01

Initial Supporting table - P0401_SamplesAfterStep

Description: Total number of samples needed after a step change. A greater number of samples allows the EWMA logic to make a decision sooner after a step change. Also used as the threshold of total step counts above which a test can be considered complete for a particular trip. This is a function of barometric pressure to allow compliant response at different altitudes.

Value Units: Total number of samples needed after a step change(samples)

X Unit: Barometric pressure (kPa)

y/x	65	70	75	80	85	90	95	100	105
1	15	15	15	15	15	15	15	15	15

17 OBDG01

Initial Supporting table - P0401_StepDelta

Description: Minimum difference between MAP difference and EWMA to trigger multiple tests for step change. This is a function of barometric pressure to allow compliant response at different altitudes.

Value Units: Minimum difference between MAP difference and EWMA (kPa)

X Unit: Barometric pressure (kPa)

y/x	65	70	75	80	85	90	95	100	105
1	15	15	15	15	15	15	15	15	15

17 OBDG01

Initial Supporting table - P0401_StepMAP_DIFF

Description: Minimum value of MAP difference to trigger multiple tests for step change. This is a function of barometric pressure to allow compliant response at different altitudes.

Value Units: Minimum value of MAP difference (kPa)

X Unit: Barometric pressure (kPa)

y/x	65	70	75	80	85	90	95	100	105
1	2	2	2	2	2	2	2	2	2

17 OBDG01

Initial Supporting table - P0401_StepSamplesPerTrip

Description: Maximum number of samples per trip after a step change. Also used as the threshold of trip step counts above which a test can be considered complete for a particular trip. This is a function of barometric pressure to allow compliant response at different altitudes.

Value Units: Maximum number of samples per trip after a step change (samples)

X Unit: Barometric pressure (kPa)

y/x	65	70	75	80	85	90	95	100	105
1	1	1	1	1	1	1	1	1	1

17 OBDG01

Initial Supporting table - P0420_BestFailingOSCTableB1

Description: This table is a 9x17 table of baseline Best Failing (e.g. threshold converter) OSC times for catalyst Bank 1. The axis' for this table include the average airflow and the catalyst temperature. After OSC is measured for a specific temp and airflow,the BestFailing OSC value is found within this table for the measured temp and airflow and is used along with the OSC_TimeRaw (and the WorstPassing value) to calculate the Normalized Ratio for that specific test. The values in this table are based on the measured OSC for the identified BPU converter that is used for MIL illumination across the specific temp and airflow range for a given program.

Initial Supporting table - P0420_WorstPassingOSCTableB1

Description: This table is a 9x17 table of WorstPassing (e.g. 120k) OSC times for catalyst Bank 1. The axis' for this table include the average airflow and the catalyst temperature. After OSC is measured for a specific temp and airflow, the WorstPassing OSC value is found within this table for the measured temp and airflow and is used along with the OSC_TimeRaw (and the BestFailing OSC value) to calculate the Normalized Ratio for that specific test. The values in this table are based on the measured OSC for the WPA part across the temp and airflow range.

17 OBDG01

Initial Supporting table - P050D_P1400_CatalystLightOffExtendedEngineRunTimeExit

Description: Exit Catalyst Warm-up mode if Engine Run Time is greater than this value. This table is based on percent ethanol (x-axis) and catmon's NormRatio_EWMA value (y-axis). The NormRatio_EWMA value determines the state of the catalyst. Typically, NormRatio_EWMA values below 0.35 (0 is bad and 1 is good) represent catalysts that have degraded. The emission performance of these degraded catalysts can be improved by extending catalyst light off of GetE85R_Pct_FFS_CompAtEngFloat.

17 OBDG01

Initial Supporting table - P1400_ColdStartDiagnosticDelayBasedOnEngineRunTime

Description: Quality weight-based on engine run time. This allows adjustment of the weighting factors at various engine run times in order to prevent the updating of the cumulative quality timer or to change the value of the average qualified residual energy calculation to prevent false Fails of the diagnostic under circumstances inappropriate to update the calculation of the average qualified residual value.

y/x	0	4	8	10	12	16	20	24	30
1	0	0	1	1	1	1	1	1	1

17 OBDG01

Initial Supporting table - P1400_ColdStartDiagnosticDelayBasedOnEngineRunTimeCalAxis

Description: This is the x-axis for the KtCSED_K_TimeWght calibration table. Refer to the description for KtCSED_K_TimeWght for details.

y/x	1	2	3	4	5	6	7	8	9
1	0	4	8	10	12	16	20	24	30

17 OBDG01

Initial Supporting table - P1400_EngineSpeedResidual_Table

Description: This 1x17 table of engine exhaust flow values is used to calculate both the desired and the actual engine exhaust flow based on desired and actual engine speed. The desired engine exhaust flow is gathered from the desired engine speed (VeSPDR_n_EngDsrd). The value used for the actual engine exhaust flow is based on the actual engine RPM value.

y/x	100	300	500	700	800	850	880	925	980	1,025	1,050	1,100	1,300	1,500	1,800	2,000	2,200
1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1

Initial Supporting table - P1400_SparkResidual_Table

Description: Predicted engine-out energy potential based on either the desired cold start spark advance value or the actual spark advance value. ExhEngyPerUnitMass calibration is used to calculate both desired exhaust energy and actual energy. The desired and actual exhaust energy per unit mass values are used in part to calculate the desired exhaust energy per unit time and actual exhaust energy per unit time. Both desired and actual go into the residual exhaust energy per unit time calculation.

y/x	-20	-17	-15	0	1	2	3	5	10

17 OBDG01

Initial Supporting table - P0101, P0106, P010B, P0121, P012B, P0236, P1101: MAF1 Residual Weight Factor based on MAF Est

Description: P0101_P0106_P010B_P0121_P012B_P0236_P1101 MAF1 Residual Weight Factor based on MAF Est

Value Units: Weight Factor (Unitless)

X Unit: Estimated Engine Air Flow (Grams/Second)

y/x	0	50	70	73	76	79	82	85	89	95	100	110	150	170	200	230	250
1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1

17 OBDG01

Initial Supporting table - P0101, P0106, P010B, P0121, P012B, P0236, P1101: MAF1 Residual Weight Factor based on RPM

Description: P0101_P0106_P010B_P0121_P012B_P0236_P1101 MAF1 Residual Weight Factor based on RPM

Value Units: Weight Factor (Unitless)

X Unit: Engine Speed (RPM)

y/x	0	400	800	1,200	1,600	2,000	2,400	2,800	3,200	3,600	4,000	4,400	4,800	5,200	5,600	6,000	8,000
1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1

Initial Supporting table - P0128_Maximum Accumulated Energy for Start-up ECT conditions - Alternate

Description: KtECTR_E_CTR_WrmUpEnrgyLimTest1

Value Units: Cooling system energy failure threshold (kJ)

X Unit: Minimum ECT for the key cycle (°C)

y/x	-10	0	10	30	51	69	76
1	3,537	2,998	2,459	1,382	250	250	250

Initial Supporting table - P0128_Maximum Accumulated Energy for Start-up ECT conditions - Primary
Description: KtECTR_E_CTR_WrmUpEnrgyLimTest0

Value Units: Cooling system energy failure threshold (kJ)

X Unit: Minimum ECT for the key cycle (°C)

y/x	-10	0	10	30	51	69	76
1	3,724	3,724	3,346	2,590	1,796	1,116	852

17 OBDG01

Initial Supporting table - P0606_Last Seed Timeout f(Loop Time)

Description: The max time for the Last Seed Timeout as a function of operating loop time sequence.

y/x	CePISR_e_6p25msSeq	CePISR_e_12p5msSeq	CePISR_e_25msSeq	CePISR_e_LORES_C
1	0.175	0.175	0.175	409.594

Initial Supporting table - P0606_Program Sequence Watch Enable f(Core, Loop Time)

Description:				
y/x	CeTSKR_e_CPU	CeTSKR_e_CPU2	CeTSKR_e_CPU3	CeTSKR_e_CPU4
CePISR_e_6p25msSeq	1.0	1.0	0.0	0.0
CePISR_e_12p5msSeq	1.0	1.0	0.0	0.0
CePISR_e_25msSeq	1.0	1.0	0.0	0.0
CePISR_e_LORES_C	1.0	1.0	0.0	0.0

Initial Supporting table - P0606_PSW Sequence Fail f(Loop Time)**Description:** Fail threshold for PSW per operating loop.

y/x	CePISR_e_6p25msSeq	CePISR_e_12p5msSeq	CePISR_e_25msSeq	CePISR_e_LORES_C
1	3	3	3	3

17 OBDG01

Initial Supporting table - P0606_PSW Sequence Sample f(Loop Time)

Description: Sample threshold for PSW per operating loop.

y/x	CePISR_e_6p25msSeq	CePISR_e_12p5msSeq	CePISR_e_25msSeq	CePISR_e_LORES_C
1	4	4	4	4

17 OBDG01

Initial Supporting table - P16F3_Delta MAP Threshold f(Desired Engine Torque)

Description: Engine Sync based and Time based delta pressure threshold above which Torque Security error is reported.

y/x	0.00	50.00	100.00	150.00	200.00	300.00
1.00	34.92	34.92	34.92	34.92	34.92	34.92

17 OBDG01

Initial Supporting table - P16F3_Delta Spark Threshold f(RPM,APC)

Description: Threshold for determining when the difference between commanded spark and applied spark exceeds the torque security requirement. It is a function of engine rpm and APC.

y/x	500.00	980.74	1,461.48	1,942.23	2,422.97	2,903.71	3,384.45	3,865.20	4,345.94	4,826.68	5,307.42	5,788.16	6,268.91	6,749.65	7,230.39	7,711.13	8,191.88

17 OBDG01

Initial Supporting table - Closed Loop Enable Clarification - KaFCLP_U_SlphrIntglOfst_Thrsh

Description: Integral Offset voltage thresholds (bank and cell specific calcs) used with KeFCLP_Pct_CatAccuSlphrPostDsbl to check for sulphur poisoning.

Value Units: millivolts

X Unit: Post Catalyst Number

y/x	CiOXYR_O2_PostCat1	CiOXYR_O2_PostCat2
CiFCLP_Decel	2,048	2,048
CiFCLP_Idle	2,048	2,048
CiFCLP_Cruise	2,048	2,048
CiFCLP_LightAccel	2,048	2,048
CiFCLP_HeavyAccel	2,048	2,048

17 OBDG01

Initial Supporting table - Closed Loop Enable Clarification - KcFCLP_Cnt_O2RdyCyclesThrsh

Description: Number of times a post oxygen sensor value must be in range before declaring it ready

Value Units: Time (events * 12.5 milliseconds)

y/x	1
1	80

17 OBDG01

Initial Supporting table - Closed Loop Enable Clarification - KcFULC_O2_SensorReadyEvents

Description: Number of times a pre oxygen sensor value must be in range before declaring it ready

Value Units: Time (events * 12.5 milliseconds)

y/x	1
1	20

Initial Supporting table - Closed Loop Enable Clarification - KeFCLP_dm_IntegrationAirflowMax

Description: Maximum allowed estimated airflow for post O2 integral terms to be updated.

Value Units: Grams per Second

y/x	1
1	512

Initial Supporting table - Closed Loop Enable Clarification - KeFCLP_Pct_CatAccuSlphrPostDsbl

Description: Sulphur percent threshold above which post integral learning is disabled if the threshold criteria KaFCLP_U_SlphrIntglOfst_Thrsh is also met.

Value Units: Percent

y/x	1
1	255

17 OBDG01

Initial Supporting table - Closed Loop Enable Clarification - KeFCLP_T_IntegrationCatalystMax

Description: Maximum allowed estimated catalytic converter temperature for post O2 integral terms to be updated.

Value Units: Celcius

y/x	1
1	950

17 OBDG01

Initial Supporting table - Closed Loop Enable Clarification - KeFCLP_T_IntegrationCatalystMin

Description: Minimum allowed estimated catalytic converter temperature to begin using post O2 integration correction terms. Converter temperature must remain above this threshold to ramp-in the post O2 integration adjustments. Once the ramp-in has started, a converter temperature below this threshold will freeze the ramp-in multiplier. Post O2 integration will not be allowed below this converter temperature

Value Units: Celcius

y/x	1
1	350

17 OBDG01

Initial Supporting table - Closed Loop Enable Clarification - KeWRSC_T_HtrCntrlCL

Description: WRAF heater temperature enabling threshold for transition from Open Loop to Closed Loop

Value Units: Degrees Celcius

y/x	1
1	628

Initial Supporting table - Closed Loop Enable Clarification - KeWRSI_T_PumpCurrentEnable**Description:** WRAF heater temperature threshold for enabling the sensor pump current**Value Units:** Degrees Celcius

y/x	1
1	628

17 OBDG01

Initial Supporting table - Closed Loop Enable Clarification - KfFCLL_T_AdaptiveHiCoolant

Description: LTM learning is inhibited if the engine coolant temperature is above this calibration.

Value Units: Degrees Celcius

y/x	1
1	255

17 OBDG01

Initial Supporting table - Closed Loop Enable Clarification - KfFCLL_T_AdaptiveLoCoolant

Description: LTM learning is inhibited if the engine coolant temperature is below this calibration.

Value Units: Degrees Celcius

y/x	1
1	35

17 OBDG01

Initial Supporting table - Closed Loop Enable Clarification - KfFCLP_U_O2ReadyThrshLo

Description: Voltage limit checked against when determining if a post converter oxygen sensor is in range

Value Units: millivolts

y/x	1
1	1,100

17 OBDG01

Initial Supporting table - Closed Loop Enable Clarification - KtFCLL_p_AdaptiveLowMAP_Limit

Description: Long term fuel learning is disabled below this MAP limit as a function of barometric pressure.

Value Units: KPa

X Unit: KPa

y/x	65	70	75	80	85	90	95	100	105
1	17.0	17.0	17.0	17.0	17.5	18.0	18.5	19.0	19.0

17 OBDG01

Initial Supporting table - Closed Loop Enable Clarification - KtFCLP_t_PostIntglDisableTime

Description: Disable integral offset after engine start for this amount of time as a function of start up coolant temperature.

Value Units: Time in seconds

X Unit: Degrees Celcius

y/x	-40	-29	-18	-6	5	16	28	39	50	61	73	84	95	106	118	129	140
1	60.0	60.0	60.0	60.0	47.0	33.0	20.0	20.0	20.0	20.0	20.0	15.0	15.0	15.0	12.0	12.0	12.0

17 OBDG01

Initial Supporting table - Closed Loop Enable Clarification - KtFCLP_t_PostIntglRampInTime

Description: Time required to ramp integral offset to desired value as a function of start up coolant temperature.

Value Units: Time in seconds

X Unit: Degrees Celcius

y/x	-40	-29	-18	-6	5	16	28	39	50	61	73	84	95	106	118	129	140
1	5.0	5.0	5.0	5.0	5.0	5.0	5.0	5.0	5.0	5.0	5.0	5.0	5.0	5.0	5.0	5.0	5.0

17 OBDG01

Initial Supporting table - Closed Loop Enable Clarification - KtFSTA_t_ClosedLoopAutostart

Description: Engine run time following an autostart, as a function of begin run coolant, which must be exceeded to enable CLOSED LOOP.

Value Units: Time in seconds

X Unit: Degrees Celcius

y/x	-40	-28	-16	-4	8	20	32	44	56	68	80	92	104	116	128	140	152
1	2.0	2.0	2.0	2.0	2.0	2.0	2.0	2.0	2.0	2.0	1.5	1.0	1.0	1.0	1.0	1.0	1.0

17 OBDG01

Initial Supporting table - Closed Loop Enable Clarification - KtFSTA_t_ClosedLoopTime

Description: Engine run time, as a function of startup coolant temperature, which must be exceeded to enable CLOSED LOOP.

Value Units: Time in seconds

X Unit: Degrees Celcius

y/x	-40	-28	-16	-4	8	20	32	44	56	68	80	92	104	116	128	140	152

Initial Supporting table - P043E First Reference Orifice Measurement

Description: First reference orifice measurement maximum value as a function of barometric pressure

Value Units: First reference orifice measurement maximum (kPa)

X Unit: Barometric pressure (kPa)

y/x	70	80	90	100	110
1	3.7	3.8	3.9	4.0	4.0

17 OBDG01

Initial Supporting table - P043E Second Reference Orifice Measurement

Description: Second reference orifice measurement maximum value as a function of barometric pressure

Value Units: Second reference orifice measurement maximum value (kPa)

X Unit: Barometric pressure (kPa)

y/x	70	80	90	100	110
1	4.2	4.3	4.4	4.6	4.6

Initial Supporting table - P043F First Reference Orifice Measurements**Description:** First reference orifice measurement minimum value as a function of barometric pressure**Value Units:** First reference orifice measurement minimum value (kPa)**X Unit:** Barometric pressure (kPa)

y/x	70	80	90	100	110
1	1.2	1.3	1.4	1.5	1.5

Initial Supporting table - P043F Second Reference Orifice Measurements

Description: Second reference orifice measurement minimum value as a function of barometric pressure

Value Units: Second reference orifice measurement minimum value (kPa)

X Unit: Barometric pressure (kPa)

y/x	70	80	90	100	110
1	1.2	1.3	1.4	1.5	1.5

Initial Supporting table - P057B KtBRKI_K_CmpltTestPointWeight

Description:

y/x	0.000	0.020	0.040	0.100	0.150	0.250	0.500	0.750	1.000
1	0	0	1	1	1	1	1	1	1

17 OBDG01

Initial Supporting table - P057B KtBRKI_K_FastTestPointWeight

Description:

y/x	0.000	0.020	0.040	0.100	0.150	0.250	0.500	0.750	1.000

100	1	1	1	1	1	1	1	1	1

17 OBDG01

Initial Supporting table - Abnormal Cyl Mode

Description: Used for P0300-P0308. Number of consecutive number of decelerating cylinders after the misfire that would be considered abnormal. (Cylinder Mode Equation)

Value Units: Number of consecutive number of decelerating cylinders (integer)

X Unit: thousands of RPM (rpm/1000)

y/x	0	1	2	3	4	5	6	7	8
1	2	2	2	2	2	2	2	2	2

17 OBDG01

Initial Supporting table - Abnormal Rev Mode

Description: Used for P0300-P0308. Abnormal Rev Mode Number of consecutive number of decelerating cylinders after the misfire that would be considered abnormal. (Rev Mode Equation)

Value Units: Number of consecutive number of decelerating cylinders (integer)

X Unit: thousands of RPM (rpm/1000)

y/x	0	1	2	3	4	5	6	7	8
1	2.00	2.00	2.00	2.00	2.00	2.00	2.00	2.00	2.00

17 OBDG01

Initial Supporting table - Abnormal SCD Mode

Description: Used for P0300-P0308. Number of consecutive number of decelerating cylinders after the misfire that would be considered abnormal. (SCD Mode Equation)

Value Units: Number of consecutive number of decelerating cylinders (integer)

X Unit: thousands of RPM (rpm/1000)

y/x	0	1	2	3	4	5	6	7	8
1	2	2	2	2	2	2	2	2	2

17 OBDG01

Initial Supporting table - Bank_SCD_Decel

Description: Used for P0300 - P0308, Multiplier to SCD decel to account for different pattern of Paired cylinder misfire. Multipliers are a function of engine rpm and % engine Load.

Value Units: multiplier

X Unit: RPM

Y Units: percent load of max indicated torque (%)

y/x	700	800	900	1,000	1,100	1,200	1,300	1,400	1,500
5	15.00	15.00	15.00	15.00	15.00	15.00	15.00	15.00	15.00

17 OBDG01

Initial Supporting table - P0191 - High fail limit of fuel control due to high pressure sensor skewed High

Description: High fail limit of fuel control due to high pressure sensor skewed High error as Function of desired pressure

Value Units: Ratio

X Unit: Desired Pressure (Mpa)

y/x	1.50	3.00	4.00	10.00	15.00	20.00	25.00	30.00	35.00
1.00	1.20	1.20	1.20	1.20	1.20	1.20	1.20	1.09	1.05

17 OBDG01

Initial Supporting table - P0191 - Low fail limit of fuel control due to pressure sensor skewed low

Description: Low fail limit of fuel control due to pressure sensor skewed low error as Function of desired pressure

Value Units: Ratio

X Unit: Desired Pressure (Mpa)

y/x	1.50	3.00	4.00	10.00	15.00	20.00	25.00	30.00	35.00
1.00	0.75	0.75	0.75	0.75	0.79	0.82	0.86	0.92	0.95

17 OBDG01

Initial Supporting table - P0324_PerCyl_ExcessiveKnock_Threshold

Description: Fail threshold for the Knock Performance per-cylinder Excessive Knock Diagnostic

Value Units: Filtered Knock Intensity. Unit-less term scaled from 0.0 (no knock) to 5.0 (maximum/large knock)

X Unit: Engine Speed (RPM)

Y Units: N/A

y/x	500	1,000	1,500	2,000	2,500	3,000	3,500	4,000	4,500	5,000	5,500	6,000	6,500	7,000	7,500	8,000	8,500

17 OBDG01

Initial Supporting table - P0325_P0330_OpenMethod_2

Description: Defines which Knock Open Circuit Diagnostic method to use.

Value Units: Identifies one of two diagnostic methods (either 20 kHz or Normal Noise) used (as a function of engine speed) for Open Circuit detection

X Unit: Engine Speed Index, 500 to 8500 (RPM) by 500 rpm increments (Index 0, 1, 2.... 16 = 500, 1000, 1500.... 8500 RPM)

Y Units: N/A

P0325_P0330_OpenMethod_2 - Part 1

y/x	0	1	2	3	4
1	CeKNKD_e_Open_20KHz	CeKNKD_e_Open_20KHz	CeKNKD_e_Open_20KHz	CeKNKD_e_Open_20KHz	CeKNKD_e_Open_20KHz

P0325_P0330_OpenMethod_2 - Part 2

y/x	5	6	7	8	9
1	CeKNKD_e_Open_20KHz	CeKNKD_e_Open_20KHz	CeKNKD_e_Open_20KHz	CeKNKD_e_Open_20KHz	CeKNKD_e_Open_20KHz

P0325_P0330_OpenMethod_2 - Part 3

y/x	10	11	12	13	14
1	CeKNKD_e_Open_20KHz	CeKNKD_e_Open_20KHz	CeKNKD_e_Open_20KHz	CeKNKD_e_Open_20KHz	CeKNKD_e_Open_20KHz

P0325_P0330_OpenMethod_2 - Part 4

y/x	15	16			
1	CeKNKD_e_Open_20KHz	CeKNKD_e_Open_20KHz			

17 OBDG01

Initial Supporting table - P0326_P0331_AbnormalNoise_CylsEnabled

Description: Specifies which cylinders will be used for the Abnormal Noise portion of the performance diagnostics (1 = cylinder used, 0 = cylinder not used)

Value Units: Boolean that indicates which engine cylinders are being used for the per-sensor Knock Performance diagnostic (0 = not used, 1 = used)

X Unit: Cylinder number in firing order (i.e. Cyl 0 = first cylinder in firing order, Cyl 1 = second cylinder in firing order....)

Y Units: N/A

y/x	0	1	2	3	4	5	6	7
1	1	1	1	1	0	0	0	0

17 OBDG01

Initial Supporting table - P0326_P0331_AbnormalNoise_Threshold

Description: Fail threshold for the Knock Performance Abnormal Noise Diagnostic

Value Units: Filtered background engine noise. Unit-less term from the Knock Detection Fast Fourier Transform (FFT) for a selected frequency range.

X Unit: Engine Speed (RPM).

Y Units: N/A

y/x	500	1,000	1,500	2,000	2,500	3,000	3,500	4,000	4,500	5,000	5,500	6,000	6,500	7,000	7,500	8,000	8,500

Initial Supporting table - P0606_Last Seed Timeout f(Loop Time)

Description: The max time for the Last Seed Timeout as a function of operating loop time sequence.

Value Units: Max Time for Last Seed Timeout (ms)

X Unit: Operating Loop Sequence (enum)

P0606_Last Seed Timeout f(Loop Time) - Part 1

y/x	CePISR_e_6p25msSeq	CePISR_e_12p5msSeq
1	0.175	0.175

P0606_Last Seed Timeout f(Loop Time) - Part 2

y/x	CePISR_e_25msSeq	CePISR_e_LORES_C
1	0.175	409.594

Initial Supporting table - P0606_Program Sequence Watch Enable f(Core, Loop Time)

Description: The enabling flags for the program sequence watch as a function of processor core and operating loop time sequence.

Value Units: PSW enable flag (boolean)

X Unit: Processor Core (enum)

Y Units: Operating Loop Time Sequence (enum)

y/x	CeTSKR_e_CPU	CeTSKR_e_CPU2	CeTSKR_e_CPU3	CeTSKR_e_CPU4
CePISR_e_6p25msSeq	1	1	0	0
CePISR_e_12p5msSeq	1	1	0	0
CePISR_e_25msSeq	1	1	0	0
CePISR_e_LORES_C	1	1	0	0

Initial Supporting table - P0606_PSW Sequence Fail f(Loop Time)

Description: Fail threshold for PSW per operating loop.

Value Units: Fail threshold for PSW (count)

X Unit: Operating Loop (enum)

P0606_PSW Sequence Fail f(Loop Time) - Part 1

y/x	CePISR_e_6p25msSeq	CePISR_e_12p5msSeq
1	3	3

P0606_PSW Sequence Fail f(Loop Time) - Part 2

y/x	CePISR_e_25msSeq	CePISR_e_LORES_C
1	3	3

Initial Supporting table - P0606_PSW Sequence Sample f(Loop Time)

Description: Sample threshold for PSW per operating loop.

Value Units: Sample threshold for PSW (count)

X Unit: Operating Loop (enum)

P0606_PSW Sequence Sample f(Loop Time) - Part 1

y/x	CePISR_e_6p25msSeq	CePISR_e_12p5msSeq
1	4	4

P0606_PSW Sequence Sample f(Loop Time) - Part 2

y/x	CePISR_e_25msSeq	CePISR_e_LORES_C
1	4	4

17 OBDG01

Initial Supporting table - P06B6_P06B7_OpenTestCktThrshMax

Description: Knock Open Circuit Minimum Threshold for Internal Circuit Diagnostic. Used only when the 20 kHz method is being used (see "OpenMethod" description). The Open Test Circuit ensures that the internal circuit used to generate the 20 kHz signal for the Open Circuit diags (P0325, P0330) is within range.

Value Units: Unit-less, filtered term from the Knock Detection Fast Fourier Transform (FFT) for the 20 kHz frequency range.

X Unit: Engine Speed (RPM)

Y Units: N/A

y/x	500	1,000	1,500	2,000	2,500	3,000	3,500	4,000	4,500	4,650	5,500	6,000	6,500	7,000	7,500	8,000	8,500
1	0.000	0.043	0.043	0.047	0.047	0.049	0.051	0.053	0.059	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.000

17 OBDG01

Initial Supporting table - P06B6_P06B7_OpenTestCktThrshMin

Description: Knock Open Circuit Minimum Threshold for Internal Circuit Diagnostic. Used only when the 20 kHz method is being used (see "OpenMethod" description). The Open Test Circuit ensures that the internal circuit used to generate the 20 kHz signal for the Open Circuit diags (P0325, P0330) is within range.

Value Units: Unit-less, filtered term from the Knock Detection Fast Fourier Transform (FFT) for the 20 kHz frequency range.

X Unit: Engine Speed (RPM).

Y Units: N/A

y/x	500	1,000	1,500	2,000	2,500	3,000	3,500	4,000	4,500	4,650	5,500	6,000	6,500	7,000	7,500	8,000	8,500

17 OBDG01

Initial Supporting table - P1682_PT Relay Pull-in Run/Crank Voltage f(IAT)

Description: The Run/Crank voltages required to pull in the PT relay as a function of induction air temperature.

Value Units: Run/Crank Voltages required to pull in PT Relay (V)

X Unit: Induction Air Temperature (deg C)

y/x	23.0	85.0	95.0	105.0	125.0
1	7.000	8.699	9.000	9.199	10.000

17 OBDG01

Initial Supporting table - P16F3_Delta MAP Threshold f(Desired Engine Torque)

Description: Engine Sync based and Time based delta pressure threshold above which Torque Security error is reported.

Value Units: Torque Security Threshold for Engine Sync and Time Based Delta Pressure (kPa)

X Unit: Desired Engine Torque (Nm)

y/x	0.00	50.00	100.00	150.00	200.00	300.00
1.00	34.92	34.92	34.92	34.92	34.92	34.92

17 OBDG01

Initial Supporting table - P16F3_Delta Spark Threshold f(RPM,APC)

Description: Threshold for determining when the difference between commanded spark and applied spark exceeds the torque security requirement. It is a function of engine rpm and APC.

Value Units: Torque Security Threshold for difference between Commanded Spark and Applied Spark (phi)

X Unit: Engine Speed (RPM)

Y Units: APC (m)

y/x	500.00	980.74	1,461.48	1,942.23	2,422.97	2,903.71	3,384.45	3,865.20	4,345.94	4,826.68	5,307.42	5,788.16	6,268.91	6,749.65	7,230.39	7,711.13	8,191.88

17 OBDG01

Initial Supporting table - P16F3_Speed Control External Load f(Oil Temp, RPM)

Description: Specifies the external load table for SPDR torque security as a function of engine oil temperature and engine RPM.

Value Units: External Load Table for SPDR (Nm)

X Unit: Engine Oil Temperature (deg C)

Y Units: Engine Speed (RPM)

y/x	-40.00	-20.00	-10.00	0.00	50.00	90.00

17 OBDG01

Initial Supporting table - P228C - High Pressure Pump Control (HPC) fail threshold of pressure too low

Description: The High Pressure Pump Control (HPC) fail threshold of pressure too low test as a function of desired fuel pressure.

Value Units: Pressure Error - Desired pressure - Actual Pressure (Mpa)

X Unit: Desired Pressure (Mpa)

y/x	2	3	4	10	15	20	25	30	35
1	0	2	3	3	4	5	5	5	5

17 OBDG01

Initial Supporting table - P228D - High Pressure Pump Control (HPC) fail threshold for pressure too high

Description: The High Pressure Pump Control (HPC) fail threshold for pressure too high test as a function of desired fuel pressure.

Value Units: Pressure Error - Desired pressure - Actual Pressure (Mpa)

X Unit: Desired Pressure (Mpa)

y/x	2	3	4	10	15	20	25	30	35
1	-3	-3	-3	-3	-4	-4	-4	-4	-4

17 OBDG01

Initial Supporting table - Pair_SCD_Decel

Description: Used for P0300 - P0308, Multiplier to SCD_Decel to account for different pattern of Paired cylinder misfire. Multipliers are a function of engine rpm and % engine Load.

Value Units: multiplier

X Unit: RPM

Y Units: percent load of max indicated torque (%)

y/x	700	800	900	1,000	1,100	1,200	1,300	1,400	1,500

17 OBDG01

Initial Supporting table - SnapDecayAfterMisfire

Description: Used for P0300 - P0308, multiplier times the ddt_jerk value used used to detect misfire at that speed and load to see if size of disturbance has died down as expected of real misfire. Table lookup as a function of engine rpm and trans gear ratio.

Value Units: multiplier

X Unit: RPM

Y Units: gear ratio

y/x	500	1,000	2,000	3,000	4,000	5,000	6,000	7,000	8,000

17 OBDG01

Initial Supporting table - WaitToStart

Description: Used for P0300-P0308. Number of engine cycles to delay if diesel engine is cranked before wait to start lamp is extinguished. This lookup table determines the delay length by taking into account the coolant temperature.

Value Units: Number of Engine Cycles (integer)

X Unit: Engine Coolant (deg C)

y/x	-20	-10	0	10	20	30	40	50	60
1	0	0	0	0	0	0	0	0	0

17 OBDG01

Initial Supporting table - WSSRoughRoadThres

Description: Used for P0300-P0308. Only used if Wheel speed from ABS is used. If difference between wheel speed readings is larger than this limit, rough road is present

Value Units: acceleration
X Unit: Vehicle Speed (KPH)

y/x	0	12	24	36	48	60	72	85	97	109	121	133	145	157	169	181	193

17 OBDG01

Initial Supporting table - P2635 Threshold Low

Description: P2635 Threshold Low Filtered Error [over-performing pump]
 Allowed instantaneous fuel pressure error [calculated filter value]

Value Units: kilopascals
X Unit: kilopascals [desired fuel pressure]
Y Units: grams / sec [fuel flow]

y/x	200.0	250.0	300.0	350.0	400.0	450.0	500.0	550.0	600.0

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Crankshaft Position (CKP) Sensor A Circuit	P0335	Diagnostic will fail if a crank sensor pulse was not received (from the ECM's replicated crank signal) during a period of time; if crank sensor pulses are received, the diagnostic will pass.	No crankshaft pulses received.	Crank Sync State= No Activity for ≥ 1.40 s	HWIO based crank decode status	= NOT Disable-Crank	Continuous at every 12.5 msec	Type B, 2 Trips

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Crankshaft Position (CKP) Sensor A Performance	P0336	1. Fail counts will occur if the engine goes out of synchronization repeatedly over a period of time and will pass if the engine stays in synchronization. 2. Diagnostic will fail if synchronization gap is not found in a specified period of time and will pass if the synchronization gap is found.	Time in which 15.00 crank re-synchronizations occur	Crank Sync State transitions to Activity Detected X times in < 10.00 seconds (without seeing "crank in sync")	HWIO based crank decode status	= NOT Disable-Crank	Continuous every 250 msec	Type B, 2 Trips
			No crankshaft synchronization gap found	Crank Sync State = Activity Detected for >= 1.40 s	HWIO based crank decode status	= NOT Disable-Crank	Continuous every 12.5 msec	

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Idle Air Control (IAC) System - RPM Too Low	P0506	This DTC sets when the idle speed is lower than the targeted idle speed	Idle Speed	Fail Criteria: Filtered input speed error (desired - actual), is greater than the fail threshold of 91 RPM. Filter coefficient for engine speed = 0.003	No Active DTCs: No Active DTCs: No Active DTCs: Accelerator pedal position Engine State Vehicle Speed Engine Coolant Commanded RPM Delta Idle Conditons Present	Motor A speed faults: P0A3F, P1B03, P0A40, P0C52, P0C53, P0C5C, P0C5D Motor B speed faults: P0A45, P1B04, P0A46, P0C57, P0C58, P0C61, P0C62 Vehicle Speed/TOS sensor faults: P0722, P077B, P215C Not Defaulted & <= 1.00 % Running (not starting or stopping states) <= 2 kph >= 60.00 Deg C < 50 RPM >= 10.00 seconds	1 loop execution at 100 ms rate Pass condition met for 10.00 seconds	Type B, 2 Trips

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
System Voltage Performance	P0561	This diagnostic detects a difference in voltage between the 12V input and the Ignition Run/Crank Voltage. The fault sets when the host controller detects the difference is above the indicated threshold for the indicated time.	Difference between 12V Battery Voltage Input and Ignition Run/Crank Voltage	> 3.00 Volts	Enable Calibration is True Diagnostic System Code Clear Requested Diagnostic System Reset Complete Battery input is present Ignition Run/Crank Voltage 12V Starter Engaged	= 1.00 (1 is Enabled) = False = True = 1.00 (1 is Available) > 6.0 Volts = False	4 seconds out of a 5 seconds window	Type C, No SVS

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
System Voltage Low	P0562	This diagnostic detects low voltage in the vehicle's 12 volt system. The fault sets when the THCP detects supply voltage below the indicated threshold for the indicated time.	Ignition Voltage	≤ 10.00 Volts	Enable Calibration is True 12V Starter Engaged Ignition Run/Crank Voltage Engine Speed	= 1.00 (1 is Enabled) = False > 6.0 Volts ≥ 0.00 RPM	5 seconds out of a 6 seconds window	Type C, No SVS

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
System Voltage High	P0563	This diagnostic detects high voltage in the vehicle's 12 volt system. The fault sets when the host controller detects supply voltage above the indicated threshold for the indicated time.	Ignition Voltage	≥ 16.00 Volts	Enable Calibration is True Ignition Run/Crank Voltage	= 1.00 (1 is Enabled) > 6.0 Volts	5 seconds out of a 6 seconds window	Type C, No SVS

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Control Module Read Only Memory (ROM)	P0601	This Diagnostic tests ROM (flash) memory in the THCP micro-controller. The test checks that ROM has not changed since it was flashed in the plant. The bytes of ROM in different areas (code, calibration, HW configuration, etc.) are summed and compared to a checksum for that area. The checksum is created when the software is built and does not change over time. The DTC sets when the checksum comparison does not match for the indicated number of times.	Calculated Checksum of the Boot ROM	≠ Expected Checksum	Controller Status ROM Checksum in Progress (Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete)	= On ≠ True = False = True	1 failure if it occurs during the first ROM test of the ignition cycle otherwise 5 failures	Type A, 1 Trips
			2nd Processor State of Health ROM fault latched	= TRUE	Controller Status ROM Checksum in Progress (Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete)	= On ≠ True = False = True	Runs continuously in the background	
			Calculated Checksum of Torque Security Related Calibrations	≠ Expected Checksum	Controller Status (Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete) = Disable Calibration is False = Enable Calibration is True	= On = False = True = 0 (0 is Enabled) = 1 (1 is Enabled)	1 failure if it occurs during the first ROM test of the ignition cycle otherwise 2 failures	

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
			ECC Fault detected in Flash memory	= TRUE	Controller Status Power Up Reset AND HWIO BINVDM ECC State AND HWIO ROM Fault Enable Calibration is true	= On = False = False = True = 1 (1 is Enabled)	Greater than 5 failures at controller initialization Runs once at initialization	
			ROM fault Active AND 2nd SOH ROM Fault Latched AND Main SOH ROM Fault Latched	≠ True ≠ True ≠ True	(Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete)	= False = True	Runs in the Background	

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Control Module Not Programmed	P0602	This Diagnostic checks that the THCP micro-controller has a valid calibration flashed into it. The controller manufacturer flashes a calibration with a particular calibration set to 1. At the vehicle plant the controller is reflashed with a valid calibration that also changes the particular calibration set to 0. The DTC sets when the diagnostic checks that particular calibration and it has a nonzero value.	No Start Calibration is True	= 0 (1 is for No Start Condition)	(Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete)	= False = True	Runs once at controller initialization and every 1 second there after	Type A, 1 Trips

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Control Module Long Term Memory Reset	P0603	This Diagnostic tests the NonVolatile Memory (NVM) in the THCP micro-controller for changes since the last write at power down. The bytes of various NVM sections are summed and compared to checksums for each section that were stored at the last powerdown. The DTC sets when the checksum comparisons do not match.	Static NVM Checksum at power-up	≠ Checksum at power-down	Ignition Status Enable Calibration is True	= Run or Crank = 1 (1 is Enabled)	1 failure Runs once at controller initialization	Type A, 1 Trips
			Preserved NVM Checksum at power-up	≠ Checksum at power-down	Ignition Status Enable Calibration is True	= Run or Crank = 1 (1 is Enabled)	1 failure Runs once at controller initialization	
			Power Up Reset BINVDM NVM Checksum at power-up	= False ≠ Checksum at power-down	Ignition Status Enable Calibration is True	= Run or Crank = 1 (1 is Enabled)	Runs once at controller initialization 3 out of 5 controller initializations for Failure	
			Dynamic NVM checksum at power-up AND Shutdown Finished	≠ Checksum at power-down = TRUE	Ignition Status Enable Calibration is True	= Run or Crank = 1 (1 is Enabled)	1 failure Runs once at controller initialization	
			Static NVM Error Dynamic NVM Error	= False = False	Enable Calibration is True	= 1 (1 is Enabled)	Runs once at controller initialization	
			BINVDM ECC Error	= False				

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Control Module Random Access Memory (RAM)	P0604	This Diagnostic tests the RAM in the THCP micro-controller. The diagnostic checks that RAM has not changed unexpectedly. Pattern checks are done at initialization where different patterns are written and then read back. The DTC sets if the patterns do not match. Continuous checks are done while the controller is executing code that store the same variables in multiple locations. When those variables are read, a check is done to be sure both locations still match. A DTC sets if the locations do not match for the indicated time.	Secure redundant "Y" variable	≠ Primary "V" variable for greater than 125 ms	Current Time Execution - Time of Last DualStore Error	> 25 ms	Executes in Background loop	Type A, 1 Trips
			HWIO detects an illegal write to Write Protected RAM	= TRUE	(Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete)	= False = True	Executes in Background loop 1 count to fail	
			2nd Processor State of Health RAM Fault Latched	= TRUE	(Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete)	= False = True	Executes in Background loop every 1000ms	
			Checksum of PreservedNVM_Region for Main Processor State of Health and 2nd Processor State Of Health	≠ Expected checksum value	(Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete)	= False = True	Runs once at Initialization	
			HWIO detects fault in System RAM	= TRUE	(Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete)	= False = True	Runs once at Initialization 3 count to fail	
			HWIO detects fault in Cache RAM	= TRUE	(Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete)	= False = True	Runs once at Initialization 3 count to fail	
			HWIO detects fault in eTPU RAM (Timer Processing Unit)	= TRUE	(Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete)	= False = True	Runs once at Initialization 3 count to fail	
			Main SOH RAM Fault Latched AND SPI Fault Latched	= 0 = False	(Diagnostic System Code Clear Requested AND Diagnostic System Reset	= False = True	Executes in Background loop every 1000ms

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
		<p>The microprocessors in the TPIM ECU monitor that each of the others is executing code correctly and in a timely manner. These fail cases rely on a seed and key interaction where one micro-controller sends a seed and a second controller runs a predefined set of calculations and responds with a key. The first controller sends a seed and checks that the received key matches its lookup table value for that seed and that it was received in time. The second controller checks that the correct seed value has been received and that is in time. The DTC sets when there is a mismatch of seed or key values or the expected key or seed value is out of order or if the key or seed value has not been received in the indicated time.</p> <p>Fail Case 7, 8, 9: These diagnostics are built into the hardware of the THCP microprocessor by the chip manufacturer. These diagnostics</p>	"2ndRxIncorrectKeys"		Run/Crank Voltage	>= 9.50 V		
			<p>New Seed Update Time</p> <p>Indicates that the Processor did not receive a key value from the secondary processor during the expected time frame "MainDtctdSdKeyTimeout"</p>	> 1.00 sec	<p>Number Of Mains Processors to monitor AND SPI Faults AND Seed/Key Init delay timer AND Run/Crank Voltage OR 12V Battery Voltage</p>	<p>> 0 = FALSE (No active P0606) >= 1.00 s >= 9.50 V > 11 V</p>	<p>Executes in a 12.5ms loop Detects in 1 second</p>	
			<p>Seed sequence</p> <p>Indicates that the Processor received key values in the incorrect order from the secondary processor "MainDtctdSdRxWrongOrder"</p>	≠ expected order	<p>Number Of Mains Processors to monitor AND SPI Faults AND Run/Crank Voltage OR 12V Battery Voltage</p>	<p>> 0 = FALSE (No active P0606) >= 9.50 V > 11 V</p>	<p>0.15 seconds out of a 0.2 seconds window Executes in a 12.5ms loop</p>	
			<p>Program Sequence Watch Seed time Since Seed Change</p> <p>Indicates that the Processor detected that a program Seed was not sending for the Program Sequence Watch "MainSequenceFit"</p>	> 0.20 ms	Program Sequence Watch Enabled (KaPISD_b_ProgSeqWatchEnbl[x])	= TRUE	Executes in a 50ms loop after controller initialization	
		<p>Program Sequence Watch Fault on a CPU</p> <p>Indicates that the Processor detected that a program was ran out of sequence according to the Program Sequence Watch "MainSequenceFit"</p>	seed sequence ≠ expected sequence	Program Sequence Watch Enabled (KaPISD_b_ProgSeqWatchEnbl[x])	= TRUE	0.15 seconds out of a 0.2 seconds window		

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
		check the ALU and Configuration registers to ensure there have been no changes. The DTC sets if these registers have changed since the software flash at the vehicle plant. An additional built in diagnostic checks whether the top of the stack memory has changed from initialization at power up. The DTC sets if this section of memory has been detected to have changed for the indicated amount of time.	HWIO detects Fault in ALU Test Indicates that the Processor detected an ALU fault in the processor "MainALU_Flt"	= 2 faults in a key cycle	Enabled Calibration is True (Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete) Run Crank Ignition Low Voltage AND Run Crank Low Voltage Crank	= 1 (1 is Enabled) = False = True = False = False	Runs continuously in 12.5ms loop	
		Fail Case 10: This diagnostic checks the analog to digital converter (ADC) in the THCP microprocessor. If the accuracy of the ADC read of a test voltage is greater than the indicated threshold for the indicated amount of time then the DTC sets.	HWIO detects Fault in Configuration Registry Test Indicates that the Processor detected a Configuration Register fault in the processor "MainCfgRegFlt"	= 2 faults in a key cycle	Enable Calibration is True (Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete) Run Crank Ignition Low Voltage AND Run Crank Low Voltage Crank	= 1 (1 is Enabled) = False = True = False = False	Runs continuously in 12.5ms loop	
		Fail Case 11, 12: These diagnostics use microprocessor internal circuitry to detect if there are faults in the RAM or Flash memory. The checks occur at power up and will set	HWIO detects Fault in the Stack Limit Test Indicates that the CPU Stack memory exceeded the limit "MainStackFlt"	= 2 faults since power up	Enable Calibration is True (Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete)	= 1 (1 is Enabled) = False = True	Runs Continuously in 100ms loop	
			Voltage difference between expected circuit voltage and actual test circuit voltage Indicates that the	> 9 V	Enable Calibration is True AND Run/Crank Voltage (Diagnostic System Code Clear Requested	= 1 (1 is Enabled) >= 7 V = False	0.15 seconds out of a 0.2 seconds window OR A2D Converter Test Error >=

HWIO circuitry detects if an electrical circuit high is present or not. HSD 1 Short to Power Fault Status	=TRUE	Enable Calibration is True	= 1 (1 is Enabled)	0.00625 seconds (1 Loop)	Type A, 1 Trips

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Torque Managment System - Forced Engine Shutdown	P06AF	This THCP Diagnostic checks that the ECM is processing code correctly. The ECM has a main and a secondary processor. As long as the main ECM processor responds to the secondary ECM processor correctly then the correct pattern is sent via CAN message to the THCP. When the ECM does not have correct interaction between its two microprocessors then an incorrect pattern is sent to the THCP and the THCP sets the DTC.	Received pattern from the ECM OR Received malfunction pattern	≠ expected pattern (F, 5, B, D, A, 6, 3, 0) >= 2 counts	Run/Crank Voltage OR Ignition Run/Crank Voltage Run Crank Active Time	>= 9.50 V >= 11.00 V >= 0.10 seconds	0.1 seconds out of a 0.15 seconds window	Type A, 1 Trips

Auxiliary Transmission Fluid Pump Phase W Current Low	P0B07	This diagnostic monitors the sensed current on the "W" phase of the electric motor for an open circuit. When the phase angle of the stator current vector nears its peak, the absolute value of the current is then compared against a threshold. If the sensed current is below the failure threshold for sufficient time, the diagnostic will fail.	Peak Phase Axis Current on the W Phase	< 1.00 Amps	Drive State Delay Timer Inverter State Inverter Power Stage Inverter Voltage Rotor Position Squared Current Comanded	RUN > 10.00 ms ≠Active Discharge Normal PWM > 50.00 V -30 deg < Phase Axis < +30 deg > 5.00 Amps ²	0.4 seconds out of a 0.6 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Auxiliary Transmission Fluid Pump Motor Current High	P0C28	This diagnostic monitors the sensed current on all three phases of the electric motor. The absolute value of the highest current phase value is then compared against a threshold. If the value is above the failure threshold for sufficient time, the diagnostic will fail. This diagnostic implements the use of 2 different fail timers, one fast and one slow. The fast timer has a very short sample window so that the diagnostic will detect a sudden fault, the slower timer has a longer sample window to allow the diagnostic to detect an intermittent fault.	U, V, or W Phase Current Sensor	> 35.00 Amps	Wakeup Signal	On	0.00416 seconds out of a 0.0624 seconds window (x of y) OR 0.0104 seconds out of a 0.104 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Alive Rolling Count/ Protection Value Fault - Regenerativ e Braking Torque Request Circuit	P1B15	This diagnostic monitors the signal from the electronic brake control module (EBCM) to the THCP microprocessor with the regenerative braking torque request data. Potential failures include the EBCM transceiver, the transmission line, the THCP transceiver and the processing of the signal in both microprocessors. If the EBCM does not increment a counter with each message or fails to send the message in timetime or fails to calculate the checksum correctly the fault is set in the THCP. Detect the ARC (Alive Rolling Count) or Protection Value fault by checking the ARC counter and verifying the Protection Value of the Regenerative Braking Torque Request Circuit	Current ARC value OR Primary signal value	≠ Previous ARC value plus 1 (0-3) ≠ Protection Value	Run/Crank Active time AND Run/Crank Voltage OR Ignition Run/Crank Voltage	>= 0.50 seconds >= 9.50 Volts >= 11.00 V	0.1875 seconds out of a 0.25 seconds window Executes every time CE GMLAN msg \$235 is received	Type A, 1 Trips

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Auxiliary Transmission Fluid Pump Control Module Hybrid Battery Voltage Isolation Sensing Performance	P1E1B	This diagnostic verifies that the high voltage bus positive and negative leg sensors are neither inappropriately high nor low. It compares the sensed battery pack voltage against the high voltage positive and negative leg. If the absolute value of the difference between the sensed battery voltage and the high voltage positive and negative leg sensors is greater than the failure threshold for a sufficient time, the diagnostic will fail.	ABS(Total High Voltage Measured By the Battery Pack - High Voltage Measured from Positive to Ground - High Voltage Measured from Negative to Ground)	>= 70.00 V	No Active DTCs: Controller Initialization Contactors	P1AE8, P1AE9, P1B0B, P1B0C Complete Closed	0.175 seconds out of a 0.2 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Auxiliary Transmission Fluid Pump Control Module Hybrid Battery Voltage Isolation Sensor 1 Circuit Low	P1E1C	This diagnostic monitors the high voltage bus positive leg sensor voltage which is out of range low. The sensed voltage is compared against a threshold. If the sensed voltage is below the failure threshold for sufficient time, the diagnostic will fail	Pos mid-pack voltage	< 20.00 Volts	Controller Initialization Run Crank Active Contactors	Complete True Closed	0.7 seconds out of a 1.5 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Auxiliary Transmission Fluid Pump Control Module Hybrid Battery Voltage Isolation Sensor 1 Circuit High	P1E1D	This diagnostic monitors the high voltage bus positive leg sensor voltage which is out of range high. The sensed voltage is subtracted from the total voltage. This delta is then compared against a threshold. If the delta is above the failure threshold for sufficient time, the diagnostic will fail.	High Voltage Positive to Ground Reading - Total High Voltage Reading from High Voltage Battery	> 60.00 Volts	Controller Initialization Run/Crank Active Contactors	Complete True Closed	0.5 seconds out of a 1 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Auxiliary Transmission Fluid Pump Control Module Hybrid Battery Voltage Isolation Sensor 2 Circuit Low	P1E1E	This diagnostic monitors the high voltage bus negative leg sensor voltage which is out of range low. The sensed voltage is compared against a threshold. If the sensed voltage is below the failure threshold for sufficient time, the diagnostic will fail.	Negative mid-pack voltage	< 20.00 Volts	Controller Initialization Run/Crank Active Contactors	Complete True Closed	0.7 seconds out of a 1 seconds window (x o y)	Type A, 1 Trips

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Auxiliary Transmission Fluid Pump Motor Inverter Temperature Sensor Circuit Low	P1E35	This diagnostic monitor for inverter phase "U" temperature sensor voltage which is out of range low. The temperature sensor this diagnostic is monitoring is a negative temperature coefficient thermistor with a pull up resistor on the sensing board, meaning a high temperature of sensor short to ground will result in a low sensed voltage. After conversion the sensed temperature is compared against a threshold. If the sensed temperature is above the failure threshold for sufficient time, the diagnostic will fail.	PIM Temperature Sensor A	> 170.00 degrees C	Sensor Exists WakeUp Signal	= 1.00 On	2.5 seconds out of a 3.5 seconds window (x of y)	Type B, 2 Trips

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Auxiliary Transmission Fluid Pump Motor Inverter Temperature Sensor Circuit Range/ Performance	P1E36	This diagnostic verifies that the high voltage electric motor inverter phase "U" temperature sensor is neither inappropriately high nor low. This diagnostic compares the temperature reading from the sensor to a calculated average temperature of the vehicle. This average temperature is only calculated on key up after the vehicle has been off for a certain amount of time. The absolute value of the sensed temperature minus the calculated average temperature is then compared against a threshold. If the calculated delta between the sensed temperature and the calculated average temperature is above the fail threshold the diagnostic will fail.	ABS(Inverter A Temp- Cold Soak Average Temp)	> 10.00 degrees C	Vehicle off time Cold Start Average Temperature No Active Power Inverter Temp Out Of Range Faults: Delay timer after controller initialization	≥ 9.17 hours > -20.00 °C P0AF0 and P0AEF > 5.13 second	0.5 seconds out of a 0.6 seconds window (x of y)	Type B, 2 Trips

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV System Discharge Switch Circuit Performance	P1F63	Voltage drop over a given time is monitored to ensure discharge circuit is performing as expected.	High voltage rationalized inverter voltage delta during discharge switch commanded on time	< 20 volts = 0.1 seconds	Enable calibration is True High voltage inverter rationalized voltage before discharge High voltage inverter rationalized voltage after discharge completes Motor Speeds High voltage main contactor status IF discharge during charging is Not Allowed THEN High voltage charging contactor status	= 1 (1 is Enabled) > 330 Volts < 200 Volts < 200 RPM = OPEN = 0 (0 is Not Allowed) = OPEN	1 Failure	Type A, 1 Trips

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV System Discharge Switch Circuit Low	P1F64	Monitors the high voltage discharge switch for a circuit low fault	Active discharge circuit open status	HWIO determines if the active discharge resistor is failed open. =TRUE	Enable calibration is True	= 1 (1 is Enabled)	0.125 seconds out of a 0.15 seconds window	Type A, 1 Trips

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV System Discharge Switch Circuit High	P1F65	Monitors the high voltage discharge switch for a circuit high fault	Active discharge circuit high status	HWIO determines if the active discharge resistor is failed high. =TRUE	Enable calibration is True	= 1 (1 is Enabled)	0.125 seconds out of a 0.15 seconds window	Type A, 1 Trips

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Vehicle Speed Output Shaft Speed Correlation	P215B	The DTC Monitors if the Difference between the Transmission Output Speed, Output Speed Calculated from the Wheel Speed Sensors, and Output Speed Calculated from the Motor Speeds. The DTC sets if 2 of the 3 vehicle speed sources do not match.	Transmission Output Speed and Output Speed Calculated from the Wheel Speed Sensors and Output Speed Calculated from the Motor Speeds difference	> 12.42 mph	Number of Secured Vehicle Speed Sources	CeVSPI_e_ThreeSrcSystem	0.15 seconds	Type A, 1 Trips
					Secured Vehicle Speed Use Transmission Output Speed	1		
					Secured Vehicle Speed Use Wheel Speed	1		
					Secured Vehicle Speed Use Motor Speed	1		

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Output Shaft Speed (OSS) - Wheel Speed Correlation	P215C	The DTC calculates the difference between the output shaft speed measured from the transmission output speed sensor (TOSS) and the output shaft speed calculated from the average of the wheel speed sensors then reports if they differ from each other by a threshold for a calibrated period of time. There is a different set of enable conditions when the TOS calculated from wheel speeds and TOS calculated from motor speeds are above or below a threshold.	Difference between Transmission Output Speed and the Calculated Average of Output Speed from the Motors and Wheel Speed Sensors	≥ 50.00 RPM	Enable Calibration is True OBD Wheel Speed Sensors Driven Wheel Estimated Vehicle Speed Fault Propulsion System Active TOS calculated from Wheel Speeds TOS calculated from Motor Speeds	= 1 (1 is Enabled) True False True ≥ 200.00 RPM ≥ 200.00 RPM	0.23 seconds	Type B, 2 Trips
			Difference between Transmission Output Speed and the Calculated Average of Output Speed from the Motors and Wheel Speed Sensors	≥ 60.00 RPM	Enable Calibration is True OBD Wheel Speed Sensors Driven Wheel Estimated Vehicle Speed Fault Propulsion System Active TOS calculated from Wheel Speeds TOS calculated from Motor Speeds	= 1 (1 is Enabled) True False True ≤ 200.00 RPM ≤ 200.00 RPM	0.23 seconds

17 OBDG01 Transmission Hybrid Control Processor (THCP) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Internal Control Module Drive Motor Control Performance	P3260	This diagnostic checks that the engine speed and motor torque go below thresholds when the driver shifts to neutral. When the driver shifts to neutral and the vehicle speed is below the shown threshold the vehicle should turn off the engine and reduce the motor torque to near zero Nm. When shifted to neutral, if the engine speed does not fall below the threshold or motor torque is not removed in the shown time then the DTC is set. A second fail case is checked after the above conditions are correct the engine speed and motor torque values are continuously monitored to be sure they stay in range, otherwise the DTC is set.	((Motor A torque AND Ignore Motor A torque) OR (Motor B torque AND Ignore Motor B torque) OR (Engine speed AND Ignore Engine speed))	! < 1.00 Nm = 0.00 (0 = use Motor A torque) ! < 1.00 Nm ! = 1.00 (1 = Do not use Motor B torque) ! < 200.00 RPM = 1.00 (0 = use Engine speed)	Vehicle speed AND No motor neutral diagnostic enabled AND Gear position	< 5.00 kph = 1 (1 = Enabled) = CeHSER_e_N1_RngEqn (Neutral)	Timer from shift to neutral to all conditions being met > 33.00 seconds Debounce timer > 375.00 msec	Type A, 1 Trips
			((Motor A torque AND Ignore Motor A torque) OR (Motor B torque AND Ignore Motor B torque) OR (Engine speed AND Ignore Engine speed))	! < 1.00 Nm = 0.00 (0 = use Motor A torque) < 1.00 Nm ! = 1.00 (1 = do not use Motor B torque) ! < 200.00 RPM = 1.00 (0 = use Engine speed)	Case 1 test passed AND Gear position	= CeHSER_e_N1_RngEqn (Neutral)	Debounce timer > 375.00 msec

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
		<p>The microprocessors in the TPIM ECU monitor that each of the others is executing code correctly and in a timely manner. These fail cases rely on a seed and key interaction where one micro-controller sends a seed and a second controller runs a predefined set of calculations and responds with a key. The first controller sends a seed and checks that the received key matches its lookup table value for that seed and that it was received in time. The second controller checks that the correct seed value has been received and that is in time. The DTC sets when there is a mismatch of seed or key values or the expected key or seed value is out of order or if the key or seed value has not been received in the indicated time.</p> <p>Fail Case 7, 8, 9:</p> <p>These diagnostics are built into the hardware of the MCP microprocessor by the</p>	"2ndRxIncorrectKeys"		Run/Crank Voltage	>= 9.50 V

17 OBDG01 Motor Control Processor / MCP1A Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor "A" Phase U Current Sensor Circuit Low	P0BE7	This diagnostic monitors for the "U" phase current sensor voltage which is out of range low. After the sensor output voltage is converted, the sensed current is compared against a threshold. If the sensed current is below the failure threshold for sufficient time, the diagnostic will fail.	U phase current sensor output at highside	< -700.00 amps	Wakeup Signal Run Flag	On = 1.00	0.05 seconds out of a 0.1 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP1A Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor "A" Phase U Current Sensor Circuit High	P0BE8	This diagnostic monitors for the "U" phase current sensor voltage which is out of range high. After the sensor output voltage is converted, the sensed current is compared against a threshold. If the sensed current is above the failure threshold for sufficient time, the diagnostic will fail.	U phase current sensor output highside	> 700.00 amps	Wakeup Signal Enable Flag	On = 1.00	0.05 seconds out of a 0.1 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP1A Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor "A" Phase V Current Sensor Offset Out-of Range	P0BEA	This diagnostic monitors the offset that is learned by the phase "V" current sensor on the high voltage electric motor. In order to ensure accurate current measurement an offset is calculated when there is no current going through the motor. The offset learn process is conducted on every key crank, the learned offset is then compared against a threshold, if the offset value is larger than the fail threshold the diagnostic will fail.	V phase current sensor offset learn value	> 30.00 amps	Wakeup Signal Delay Timer Motor Faults Inverter Faults	On 0.10 Sec None None	Fai conditions met 0.10 Sec after enable conditions met	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP1A Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.

After the sensor output voltage is converted, the sensed current is compared against a threshold. If the sensed current is below the failure threshold for sufficient time, the diagnostic will fail.	V phase current sensor output at highside	< -700.00 amps	Wakeup Signal Run Flag	On = 1.00	0.05 seconds out of a 0.1 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP1A Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor "A" Phase V Current Sensor Circuit High	P0BEC	This diagnostic monitors for the "V" phase current sensor voltage which is out of range high. After the sensor output voltage is converted, the sensed current is compared against a threshold. If the sensed current is above the failure threshold for sufficient time, the diagnostic will fail.	V phase current Sensor output at highside	> 700.00 amps	Wakeup Signal Run Flag	On = 1.00	0.05 seconds out of a 0.1 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP1A Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor "A" Phase W Current Sensor Offset Out-of Range	P0BEE	This diagnostic monitors the offset that is learned by the phase "W" current sensor on the high voltage electric motor. In order to ensure accurate current measurement an offset is calculated when there is no current going through the motor. The offset learn process is conducted on every key crank, the learned offset is then compared against a threshold, if the offset value is larger than the fail threshold the diagnostic will fail.	W phase current sensor offset learn value	> 30.00 amps	Wakeup Signal Delay Timer Motor Faults Inverter Faults	On 0.10 Sec None None	Fail conditions met 0.10 sec after enable conditoinis met	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP1A Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor "A" Phase W Current Sensor Circuit Low	P0BEF	This diagnostic monitors for the "W" phase current sensor voltage which is out of range low. After the sensor output voltage is converted, the sensed current is compared against a threshold. If the sensed current is below the failure threshold for sufficient time, the diagnostic will fail.	W phase current sensor output at highside	< -700.00 amps	Wakeup Signal Run Flag	On = 1.00	0.05 seconds out of a 0.1 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP1A Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor "A" Phase W Current Sensor Circuit High	P0BF0	This diagnostic monitors for the "W" phase current sensor voltage which is out of range high. After the sensor output voltage is converted, the sensed current is compared against a threshold. If the sensed current is above the failure threshold for sufficient time, the diagnostic will fail.	W phase current sensor output at high side	> 700.00 amps	Wakeup Signal Run Flag	On = 1.00	0.05 seconds out of a 0.1 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP1A Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor "A" Phase U- V-W Correlation	P0BFD	This diagnostic monitors the U, V, and W phase currents for balance. The absolute value of the sum of the phase values is compared against a threshold. If the sum is above the failure threshold for sufficient time, the diagnostic will fail.	Sum of U-V-W phase currents	≥ 110.00 amps	Wakeup Signal Run Flag	On = 1.00	0.0032 seconds out of a 0.0038 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP1A Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor "A" Phase U- V-W Current Sensor Overcurrent	P0C01	This diagnostic monitors the sensed current on all three phases of the electric motor. The absolute value of the highest current phase value is then compared against a threshold. If the value is above the failure threshold for sufficient time, the diagnostic will fail. This diagnostic implements the use of 2 different fail timers, one fast and one slow. The fast timer has a very short sample window so that the diagnostic will detect a sudden fault, the slower timer has a longer sample window to allow the diagnostic to detect an intermittent fault.	U, V, or W Phase Current Sensor	> 600.00 amps	Wakeup Signal	On	0.0104 seconds out of a 0.104 seconds window (x of y) OR 0.00416 seconds out of a 0.0208 seconds window (x of y)	Type A, 1 Trips
			D Axis current less than calculated threshold determined by stator temperature listed in supporting table unless the motor temperature reading is faulted, then D Axis current threshold is determined by a default value	D-Axis Current<- 600.00 amps (faulted motor temp value) P0C01 D-Axis Current Thresholds (See supporting tables for expected threshold values for non-faulted motor temperature readings)	Wakeup Signal	On	0.0104 seconds out of a 0.104 seconds window (x of y) OR 0.00416 seconds out of a 0.0208 seconds window (x of y)	

17 OBDG01 Motor Control Processor / MCP1A Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor A Inverter Power Supply Circuit/Open	P0C0B	This diagnostic monitors the status of the IGBTs. The IGBT module will continuously monitor the supply circuit voltage. When the supply circuit drops below a threshold voltage the module then report out a status of being in a Bias fault. If the Bias fault status is present for sufficient time, the diagnostic will fail.	Phase A, B, or C Power Supply	Failed (Status Fault Bit)	Inverter State	Initialization Complete	0.002 seconds out of a 0.024 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP1A Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor "A" Inverter Phase U Over Temperature	P0C11	This diagnostic monitors the inverter phase U temperature for an in-range high temperature condition. The sensed temperature is compared against a threshold. If the sensed temperature is above the failure threshold for a sufficient time, the diagnostic will fail.	Inverter Phase U Temperature	> 126.00 degrees C	PIM Phase U Temperature	TEMP NORMAL	1.2 seconds out of a 2 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP1A Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor "A" Inverter Phase V Over Temperature	P0C12	This diagnostic monitors the inverter phase V temperature for an in-range high temperature condition. The sensed temperature is compared against a threshold. If the sensed temperature is above the failure threshold for a sufficient time, the diagnostic will fail.	Inverter Phase V Temperature	> 126.00 degrees C	PIM Phase V Temperature	TEMP Normal	1.2 seconds out of a 2 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP1A Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor "A" Inverter Phase W Over Temperature	P0C13	This diagnostic monitors the inverter phase W temperature for an in-range high temperature condition. The sensed temperature is compared against a threshold. If the sensed temperature is above the failure threshold for a sufficient time, the diagnostic will fail.	Inverter Phase W Temperature	> 126.00 degrees C	PIM Phase W Temperature	TEMP NORMAL	1.2 seconds out of a 2 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP1A Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor A Position Sensor Not Learned	P0C17	This diagnostic monitors the initial offset that is learned by the resolver circuit. The diagnostic runs only when there is no previously stored value for the resolver offset. The diagnostic fails when during the learn process either the motor speed is higher than a threshold, the total high voltage bus is below a threshold voltage, the peak to peak current on the motor falls below a threshold, or the learn process takes longer than a threshold time.	Initial Offset Learn Could Not Complete Because: ABS(Motor Speed)	> 50.00 rpm	Key Off	TRUE	0.30 s Learn Time	Type A, 1 Trips
			Initial Offset Learn Could Not Complete Because: Filtered DC	< 200.00 V	Key Off	TRUE	0.30 s Learn Time	
			Initial Offset Learn Could Not Complete Because: ALL phase Current	< 15.00 A	Key Off	TRUE	0.30 s Learn Time	
			Initial Offset Learn Could Not Complete Because: Learn Timer	> 1.40 s	Key Off	TRUE	0.30 s Learn Time	

17 OBDG01 Motor Control Processor / MCP1A Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor A Torque Delivered Performance	P0C19	This diagnostic is a plausibility check that the motor torque is following the commanded torque. Potential failure modes include the motor's ability to produce torque and the torque calculation path in the microprocessor. When the difference between commanded motor torque and actual motor torque is greater than the indicated threshold for longer than the timer threshold, the DTC is set.	Absolute value of (Commanded torque - Torque Command Slewed)	> 123.00 Nm	DTCs not Fault Active AND DTCs not Fault Active AND Motor Drive State ID AND ((DTCs not Fault Active) OR (Voltage Hazard Active AND Motor Temperature Fault Active))	(P1AF5 or P1B0C or P1B41) (P0A3F or P0A40 or P1B03 or P16EB) = Run P0BFD = True = False	0.1875 seconds out of a 0.2 seconds window	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP1A Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor A Position Exceeded Learning Limit	P0C4E	This diagnostic monitors the offset that is learned by the resolver circuit. The diagnostic runs on every key off cycle after the offset learn has completed. Once the offset value has been determined it is compared to a threshold. If the value of the offset is above the fail threshold, the diagnostic will fail. Another way the diagnostic can fail is once the offset learn has completed and the offset value determined, it is then compared against the previously stored offset value. If the absolute value of the difference between the previous offset value and the current offset value is above the failure threshold the diagnostic will fail.	Offset Learn Completes AND ABS(Offset Correction Angle)	> 30.00 degrees	Key Off Offset Learn Status	TRUE Complete	5.00 key off cycles of out of offset angle being out of range	Type A, 1 Trips
			Offset Learn Completes AND ABS(Offset Correction Angle - previously stored value)	> 10.00 degrees	Key Off Offset Learn Status	TRUE Complete	5.00 key off cycles of out of offset angle being out of range

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor A Control Module Not Programmed	P1A4F	This Diagnostic checks that the MCP micro-controller has a valid calibration flashed into it. The controller manufacturer flashes a calibration with a configuration ID. At the vehicle plant the controller is reflashed with a valid configuration ID. The DTC sets when the diagnostic checks the configuration ID and it does not match the correct ID.	MCP Processor Configuration ID	≠ CeMCGR_i_MCP1	None	NA	0.125 seconds out of a 0.2 seconds window	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP1A Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor A Control Module Random Access Memory (RAM)	P1A50	This Diagnostic tests the RAM in the MCP micro-controller. The diagnostic checks that RAM has not changed unexpectedly. Pattern checks are done at initialization where different patterns are written and then read back. The DTC sets if the patterns do not match. Continuous checks are done while the controller is executing code that store the same variables in multiple locations. When those variables are read, a check is done to be sure both locations still match. A DTC sets if the locations do not match for the indicated time.	Secure "Y" variable	≠ Primary "V" variable for greater than 125 ms	Current Time Execution - Time of Last DualStore Error	> 25 ms	Executes in Background loop	Type A, 1 Trips
			HWIO detects an illegal write to Write Protected RAM	= TRUE	(Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete)	= False = True	Executes in Background loop 0 counts to fail	
			2nd Processor State of Health RAM Fault Latched	= TRUE	(Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete)	= False = True	Executes in Background loop every 1000ms	
			Checksum of PreservedNVM_Region for Main Processor State of Health and 2nd Processor State Of Health	≠ Expected checksum value	(Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete)	= False = True	Runs once at Initialization	
			HWIO detects fault in System RAM	= TRUE	(Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete)	= False = True	Runs once at Initialization 1 count to fail	
			HWIO detects fault in Cache RAM	= TRUE	(Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete)	= False = True	Runs once at Initialization 1 count to fail	
			HWIO detects fault in eTPU RAM	= TRUE	(Diagnostic System Code Clear Requested AND Diagnostic System Reset Complete)	= False = True	Runs once at Initialization 1 count to fail

Drive Motor A Position Sensor Circuit Overspeed	P1B0D	This diagnostic monitors the output speed of the high voltage motor. The absolute value of the sensed speed of the motor is compared against a threshold. If the sensed speed is above the fail threshold for sufficient time, the diagnostic will fail.	ABS(Motor Speed)	> 12,700.00 rpm	Wakeup Signal	On	0.09 seconds out of a 0.1 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP1A Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor A Position Sensor Learn Incorrect	P1B0F	This diagnostic monitors the offset that is learned by the resolver circuit. The diagnostic runs on every key off cycle while the offset learn process is in progress. The offset learn process can fail when during the learn process either the motor speed is higher than a threshold, the total high voltage bus is below a threshold voltage, the peak to peak current on the motor falls below a threshold, or the learn process takes longer than a threshold time. If the learn process fails for any one of the aforementioned reasons a counter is increased and compared against a threshold. If the counter exceeds the threshold the diagnostic will fail.	Offset Learn Could Not Complete Because:		Key Off	TRUE	106.00 consecutive key cycles with a 0.30 s Learn Time	Type C, No SVS
			ABS(Motor Speed)	> 50.00 rpm				
			Consecutive Key Cycles where the offset learn is unable to complete	> 106.00 cycles				
			Initial Offset Learn Could Not Complete Because:		Key Off	TRUE	106.00 consecutive key cycles with a 0.30 s Learn Time	
Filtered DC	< 200.00 V							
Consecutive Key Cycles where the offset learn is unable to complete	> 106.00 cycles							
Initial Offset Learn Could Not Complete Because:		Key Off	TRUE	106.00 consecutive key cycles with a 0.30 s Learn Time				
ALL phase Current	< 15.00 A							
Consecutive Key Cycles where the offset learn is unable to complete	> 106.00 cycles							
Initial Offset Learn Could Not Complete Because:		Key Off	TRUE	106.00 consecutive key cycles with a 0.30 s Learn Time				
Learn Timer	> 1.40 s							
Consecutive Key Cycles where the offset learn is unable to complete	> 106.00 cycles

The sensed voltage is subtracted from the total voltage. This delta is then compared against a threshold. If the delta is above the failure threshold for sufficient time, the diagnostic will fail.	Pos mid-pack voltage - High Voltage sensor voltage	> 60.00 Volts	Controller Initialization Run/Crank Active Contactors	Complete True Closed	0.525 seconds out of a 1.05 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP2B Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor B Position Sensor Circuit Loss of Tracking	P1B04	This diagnostic monitors the output from the resolver circuit on the high voltage motor. The circuit is continually calculating the position of the rotor in degrees. When the error between each sampling of position is greater than 5 degrees the circuit will output a status signal indicating a loss of tracking. If the loss of tracking status is present for a threshold amount of time, the diagnostic will fail.	Internal Tracking Error	>5 Degrees	Wakeup Signal Resolver Initialization Delay Once Resolver has indicated a fault, a Retry timer is initiated. Retry Timer must be	ON 1.00 > 0.05 s	Failure Conditions Met for 0.20 to 0.40 seconds out of a 2.00 second window	Type A, 1 Trips

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor B Position Sensor Circuit Overspeed	P1B0E	This diagnostic monitors the output speed of the high voltage motor. The absolute value of the sensed speed of the motor is compared against a threshold. If the sensed speed is above the fail threshold for sufficient time, the diagnostic will fail.	ABS(Motor Speed)	> 12,700.00 rpm	Wakeup Signal	On	0.09 seconds out of a 0.1 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP2B Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor B Position Sensor Learn Incorrect	P1B10	This diagnostic monitors the offset that is learned by the resolver circuit. The diagnostic runs on every key off cycle while the offset learn process is in progress. The offset learn process can fail when during the learn process either the motor speed is higher than a threshold, the total high voltage bus is below a threshold voltage, the peak to peak current on the motor falls below a threshold, or the learn process takes longer than a threshold time. If the learn process fails for any one of the aforementioned reasons a counter is increased and compared against a threshold. If the counter exceeds the threshold the diagnostic will fail.	Offset Learn Could Not Complete Because:		Key Off	TRUE	106.00 consecutive key cycles with a 0.30 s Learn Time	Type C, No SVS
			ABS(Motor Speed)	> 50.00 rpm				
			Consecutive Key Cycles where the offset learn is unable to complete	> 106.00 cycles				
			Initial Offset Learn Could Not Complete Because:		Key Off	TRUE	106.00 consecutive key cycles with a 0.30 s Learn Time	
Filtered DC	< 200.00 V							
Consecutive Key Cycles where the offset learn is unable to complete	> 106.00 cycles							
Initial Offset Learn Could Not Complete Because:		Key Off	TRUE	106.00 consecutive key cycles with a 0.30 s Learn Time				
ALL phase Current	< 30.00 A							
Consecutive Key Cycles where the offset learn is unable to complete	> 106.00 cycles							
Initial Offset Learn Could Not Complete Because:		Key Off	TRUE	106.00 consecutive key cycles with a 0.30 s Learn Time				
Learn Timer	> 1.40 s							
Consecutive Key Cycles where the offset learn is unable to complete	> 106.00 cycles

17 OBDG01 Motor Control Processor / MCP2B Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor "B" Phase W Current Sensor Circuit Low	P0BFB	This diagnostic monitors for the "W" phase current sensor voltage which is out of range low. After the sensor output voltage is converted, the sensed current is compared against a threshold. If the sensed temperature is below the failure threshold for sufficient time, the diagnostic will fail.	W phase current sensor output at highside	< -700.00 amps	Wakeup Signal Run Flag	On = 1.00	0.05 seconds out of a 0.1 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP2B Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor "B" Phase W Current Sensor Circuit High	P0BFC	This diagnostic monitors for the "W" phase current sensor voltage which is out of range high. After the sensor output voltage is converted, the sensed current is compared against a threshold. If the sensed temperature is above the failure threshold for sufficient time, the diagnostic will fail.	W phase current sensor output at high side	> 700.00	Wakeup Signal Run Flag	On = 1.00	0.05 seconds out of a 0.1 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP2B Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor "B" Phase U- V-W Correlation	P0BFE	This diagnostic monitors the U, V, and W phase currents for balance. The absolute value of the sum of the phase values is compared against a threshold. If the sum is above the failure threshold for sufficient time, the diagnostic will fail.	Sum of U-V-W phase currents	≥ 110.00 amps	Wakeup Signal Run Flag	On = 1.00	0.0032 seconds out of a 0.0038 seconds window (x of y)	Type A, 1 Trips

17 OBDG01 Motor Control Processor / MCP2B Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor "B" Phase U- V-W Current Sensor Overcurrent	P0C04	This diagnostic monitors the sensed current on all three phases of the electric motor. The absolute value of the highest current phase value is then compared against a threshold. If the value is above the failure threshold for sufficient time, the diagnostic will fail. This diagnostic implements the use of 2 different fail timers, one fast and one slow. The fast timer has a very short sample window so that the diagnostic will detect a sudden fault, the slower timer has a longer sample window to allow the diagnostic to detect an intermittent fault.	U, V, or W Phase Current Sensor	> 600.00 amps	Wakeup Signal	On	0.0104 seconds out of a 0.104 seconds window (x of y) OR 0.00416 seconds out of a 0.0208 seconds window (x of y)	Type A, 1 Trips
			D Axis current less than calculated threshold determined by stator temperature listed in supporting table unless the motor temperature reading is faulted, then D Axis current threshold is determined by a default value	D-Axis Current<- 600.00 amps (faulted motor temp value) P0C04 D-Axis Current Thresholds (See supporting tables for expected threshold values for non-faulted motor temperature readings)	Wakeup Signal	On	0.0104 seconds out of a 0.104 seconds window (x of y) OR 0.00416 seconds out of a 0.0208 seconds window (x of y)	

17 OBDG01 Motor Control Processor / MCP2B Summary Tables (Unique)

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Drive Motor B Inverter Power Supply Circuit/Open	P0C0E	This diagnostic monitors the status of the IGBTs. The IGBT module will continuously monitor the supply circuit voltage. When the supply circuit drops below a threshold voltage the module then report out a status of being in a Bias fault. If the Bias fault status is present for sufficient time, the diagnostic will fail.	Phase A, B, or C Power Supply	Failed (Status Fault Bit)	Inverter State	Initialization Complete	0.002 seconds out of a 0.024 seconds window (x of y)	Type A, 1 Trips

Unique Supporting table - P0C04 D-Axis Current Thresholds**Description:** X-Axis is stator temperature, Y-Axis is current threshold for the D-Axis current

y/x	100	140	150	160	170	180	190	200	210	220

17 OBDG01 Vehicle Integration Control Module (VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Ambient Air Temperature Sensor Range/ Performance	P0071	The purpose of the rationality diagnostic is to detect and report a failure of the sensor when rationalized with other sensors in the vehicle. This diagnostic will run after the soak conditions are met. If the enable criteria are met and if the temperature difference of the compared sensors is greater than their calibrated thresholds, the fail counter will be incremented. If the calibrated fail count threshold is met before the calibrated sample count, the diagnostic will report a FAIL and if not it will report a PASS.	ABS (Outside Air Temperature - Inlet Air Temperature) AND ABS (Outside Air Temperature - Engine Coolant Temperature)	> 28.00 > 28.00	System Voltage Power mode Test complete this trip Compressor running Propulsion Off Timer Power Electronic Pump transition soak time Compressor Off transition soak time Charger Off transition soak time No active power electronic pump DTC: No active outside air temperature DTC: No active run crank DTCs: No active propulsion system off timer DTC: ECT compare No active inlet air temperature DTCs: No active engine coolant temperature DTCs:	> 10.20 V = Run for < 20.00 s = FALSE = FALSE > 21,600.00 s > 3,600.00 s > 3,600.00 s > 3,600.00 P0CE9, P1F44, P1F45 P0072, P0073 P2534, P2535 P0606 = TRUE P0110, P0111, P0112, P0113, P0114 P0115, P0116, P0117, P0118, P0119	32.00 fails / 40.00 samples at 250ms	Type B, 2 Trips

17 OBDG01 Vehicle Integration Control Module (VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Ambient Air Temperature Sensor Circuit Low Input	P0072	This diagnostic detects if the temperature sensor has an out of range low circuit fault. If the enable criteria are met and the temperature sensor voltage read is below a calibrated threshold, the fail counter will increment. If the calibrated fail count threshold is met before the calibrated sample count, the diagnostic will report a FAIL and if not it will report a PASS. The diagnostic will continue to report as long as the enablement criteria are met.	Sensor voltage	< 2.00 % (0.10 V) of reference voltage	System Voltage	> 10.20 V	16.00 fails / 20.00 samples at 250ms	Type B, 2 Trips

17 OBDG01 Vehicle Integration Control Module (VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Ambient Air Temperature Sensor Circuit High Input	P0073	This diagnostic detects if the temperature sensor has an out of range high circuit fault. If the enable criteria are met and the temperature sensor voltage read is above a calibrated threshold, the fail counter will increment. If the calibrated fail count threshold is met before the calibrated sample count, the diagnostic will report a FAIL and if not it will report a PASS. The diagnostic will continue to report as long as the enablement criteria are met.	Sensor voltage	> 96.00 % (4.80 V) of reference voltage	System Voltage	> 10.20 V	16.00 fails / 20.00 samples at 250ms	Type B, 2 Trips

17 OBDG01 Vehicle Integration Control Module (VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Ambient Air Temperature Sensor Circuit Intermittent	P0074	This diagnostic detects if the temperature sensor circuit has an intermittent circuit fault. The string length is the addition of absolute difference between consecutive readings for a calibrated number of samples. If the string length is greater than the calibrated fail threshold, the fail counter will increment. If the calibrated fail count threshold is met before the calibrated sample count, the diagnostic will report a FAIL and if not it will report a PASS. The diagnostic will continue to report as long as the enablement criteria are met.	String Length Where: "String Length" = sum of "Diff" calculated over And where: "Diff" = ABS (current OAT reading - OAT sensor value from 250 milliseconds previous)	> 50.00 % 4 consecutive OAT samples	System Voltage	> 10.20 V	4.00 fails / 5.00 samples at 1 second	Type B, 2 Trips

17 OBDG01 Vehicle Integration Control Module (VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Electronics Coolant Temperature Sensor Circuit Low	P0CF0	This diagnostic detects if the temperature sensor has a out of range low circuit fault. If the enable criteria are met and the temperature sensor voltage read is below a calibrated threshold, the fail counter will increment. If the calibrated fail count threshold is met before the calibrated sample count, the diagnostic will report a FAIL and if not it will report a PASS. The diagnostic will continue to report as long as the enablement criteria are met.	Sensor voltage	< 4.00 % (0.20 V) of reference voltage	System Voltage	> 10.20 V	16.00 fails / 20.00 samples at 250ms	Type B, 2 Trips

17 OBDG01 Vehicle Integration Control Module (VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Electronics Coolant Temperature Sensor Circuit High	P0CF1	This diagnostic detects if the temperature sensor has a out of range high circuit fault. If the enable criteria are met and the temperature sensor voltage read is above a calibrated threshold, the fail counter will increment. If the calibrated fail count threshold is met before the calibrated sample count, the diagnostic will report a FAIL and if not it will report a PASS. The diagnostic will continue to report as long as the enablement criteria are met.	Sensor voltage	> 98.00 % (4.90 V) of reference voltage	System Voltage	> 10.20 V	16.00 fails / 20.00 samples at 250ms	Type B, 2 Trips

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Electronics Coolant Temperature Sensor Circuit Intermittent/ Erratic	P0CF2	This diagnostic detects if the temperature sensor circuit has an erratic circuit fault. The string length is the addition of absolute difference between consecutive readings for a calibrated number of samples. If the string length is greater than the calibrated fail threshold, the fail counter will increment. If the calibrated fail count threshold is met before the calibrated sample count, the diagnostic will report a FAIL and if not it will report a PASS. The diagnostic will continue to report as long as the enablement criteria are met.	String Length Where: "String Length" = sum of "Diff" calculated over And where: "Diff" = ABS (current PECL reading - PECL reading from 250 milliseconds previous)	> 90.00 °C 4 consecutive PECL samples	System Voltage	> 10.20 V	4.00 fails / 5.00 samples at 1 second	Type B, 2 Trips

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Lost Communicati on with Hybrid Powertrain Control Module on Bus B	U1817	Detects Lost Communication with Hybrid Powertrain Control Module on Bus B	Detects that CAN serial data communication has been lost with the Hybrid Powertrain Control Module on Bus B - Messages have not been received from the HCP for a specified time	≥ 500ms	Controller On Bus B Communication Enabled Time Battery Voltage	=TRUE >=5 seconds >= 10.20 V	Runs in 10ms loop	Type A, 1 Trips

17 OBDG01 Vehicle Integration Control Module (VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Lost Communicati on With ECM on Bus B	U1818	Detects Lost Communication with ECM on Bus B	Detects that CAN serial data communication has been lost with the ECM on Bus B - Messages have not been received from the ECM for a specified time	$\geq 500\text{ms}$	Controller On Bus B Communication Enabled Time Battery Voltage	=TRUE >=5 seconds >= 10.20 V	Runs in 10ms loop	Type B, 2 Trips

17 OBDG01 Vehicle Integration Control Module (VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Lost Communicati on with Battery Energy Control Module on Bus H	U185A	Detects Lost Communication with Battery Energy Control Module on Bus H	Detects that CAN serial data communication has been lost with the Battery Energy Control Module on Bus H - Messages have not been received from the Battery Energy Control Module for a specified time	≥ 500ms	Controller On Bus H Communication Enabled Time Battery Voltage	=TRUE >=5 seconds >= 10.20 V	Runs in 10ms loop	Type A, 1 Trips

17 OBDG01 Vehicle Integration Control Module (VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Control Module Improper Wake-up Performance	U3012	Control Module Wake- up Circuit Performance (Self Wakeup Fault)	Control module unable to do a Self Wakeup when there is a request to do so		Diagnostic Enabled	= TRUE	Runs once at powerup if a Self-Wakeup request was active last power down	Type A, 1 Trips
					Self-Wakeup Requested	=TRUE		

17 OBDG01 OAT Emission Status

Conditions for Ambient Temperature Emissions Status Using OAT Sensor to be Valid

OAT Validity is VALID where no OAT diagnostic fault active for DTC P0071, P0072, P0073, P0074

If all of the following conditions are TRUE, the Mask = Use Data

1. Startup OAT is less than previous trip EAT

OR

2. Startup ECT - previous trip EAT $\leq 0^{\circ}\text{C}$

OR

3. Engine Off Time $\geq 7,200$ seconds

OR

4. At startup, time since previous EAT valid and able to learn $\geq 3,600$ seconds

OR

5. EAT - current OAT $0^{\circ}\text{C} \leq \text{difference} \leq 2^{\circ}\text{C}$

OR

6. EAT < current OAT and speed timer ≥ 420 seconds
and current OAT - EAT $\leq 2^{\circ}\text{C}$

Speed timer increments at 100msec rate and increments vary based on the vehicle speed as follows:

Vehicle speed < 26 mph for 2 seconds
26 mph < speed < 56 mph for 1 seconds
56 mph < speed < 199 mph for 2 seconds
199 mph < speed < 200 mph for 2 seconds

Speed timer can never be less than 0 seconds

If OAT Validity = VALID and Mask = Use Data, then Status = VALID

17 OBDG01 OAT Corrected Status

Conditions for Corrected / Estimated Ambient Temperature Status Using OAT Sensor to be Valid
OAT Validity is VALID where no OAT diagnostic fault active for DTC P0071, P0072, P0073, P0074

AND

Engine Time Off Validity = VALID

AND

Vehicle Speed Validity = VALID

AND

If all of the following conditions are TRUE, the Mask = Use Data

1. Startup OAT is less than previous trip EAT

OR

2. Startup ECT - previous trip EAT $\leq 0^{\circ}\text{C}$

OR

3. Engine Off Time $\geq 7,200$ seconds

OR

4. At startup, time since previous EAT valid and able to learn $\geq 3,600$ seconds

OR

5. EAT - current OAT $0^{\circ}\text{C} \leq$ difference $\leq 2^{\circ}\text{C}$

OR

6. EAT < current OAT and speed timer ≥ 420 seconds

and current OAT - EAT $\leq 2^{\circ}\text{C}$

Speed timer increments at 100msec rate and increments vary based on the vehicle speed as follows:

Vehicle speed < 26 mph for 2 seconds

26 mph < speed < 56 mph for 1 seconds

56 mph < speed < 199 mph for 2 seconds

199 mph < speed < 200 mph for 2 seconds

Speed timer can never be less than 0 seconds

If OAT Validity = VALID and Mask = Use Data, then Status = VALID

17 OBDG01 OAT Arbitrated Status

Conditions for Arbitrated Ambient Temperature Status Using OAT Sensor to be Valid

Path 1:

Run Crank Active Fault Active Flag is TRUE (DTC P2534 or P2535)

AND

Vehicle Power Mode Status is Valid

AND

Vehicle Power Mode = Run

THEN

Outside Air Temperature Arbitrated Status = Outside Air Temperature Corrected Status (See tab)

ELSE

Outside Air Temperature Arbitrated Status = Outside Air Temperature Emissions Status (See tab)

Path 2:

Run Crank Active Fault Active Flag is TRUE (DTC P2534 or P2535)

AND

Run Crank Active = TRUE

AND

Accessory = TRUE

THEN

Outside Air Temperature Arbitrated Status = Outside Air Temperature Corrected Status (See tab)

ELSE

Outside Air Temperature Arbitrated Status = Outside Air Temperature Emissions Status (See tab)

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Cooling Fan 1 Control Circuit	P0480	This diagnostic detects if the host controller has detected an open, short to ground, and short to voltage fault on the output circuit. If the enable criteria are met and a fault is detected on the circuit, the fail counter will increment. If the calibrated fail count threshold is met before the calibrated sample count, the diagnostic will report a FAIL and if not it will report a PASS. The diagnostic will continue to report as long as the enablement criteria are met.	Fan Control Current When Active	< 200 mA and > 3A	System Voltage	> 10.20 V	16.00 fails / 20.00 samples at 250ms	Type B, 2 Trips
			Fan Control Current When Inactive	< 80 uA	System Voltage	> 10.20 V	16.00 fails / 20.00 samples at 250ms	

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
High Voltage System Interlock Circuit Low	P0A0C	The diagnostic monitors the sensed interlock voltage for values that are below a threshold when the HVIL circuit is commanded to 5 volts	HVIL Sensed % of 5 volts	< 30 %	HVIL Commanded Status 12V Battery Voltage	5V > 10.2V	2 failures out of 2 samples 12.5 ms /sample 25 ms	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
High Voltage System Interlock Circuit High	P0A0D	The diagnostic monitors the sensed interlock voltage for values that are above a threshold. The threshold is different depending upon when the HVIL circuit is commanded to 5 volts or 0 volts.	HVIL Sensed % of 5 volts	> 24 %	HVIL Commanded Status 12V Battery Voltage	0V > 10.2V	5 failures out of 8 samples 12.5 ms /sample	One Trip, Type A
			OR HVIL Sensed % of 5 volts	> 44 %	HVIL Commanded Status 12V Battery Voltage	5V > 10.2V	4 failures out of 6 samples 12.5 ms /sample	
							100 ms	

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Pack Over temperature	P0A7E	This diagnostic detects if the max battery temperature is above a threshold. If the enable criteria are met and the temperature is above a calibrated threshold, the fail counter will increment. If the calibrated fail count threshold is met before the calibrated sample count, the diagnostic will report a FAIL and if not it will report a PASS. The diagnostic will continue to report as long as the enablement criteria are met.	Battery Max Temperature Above Threshold	> 73.50 °C	System Voltage No Active DTCs (Battery temperature status) Short Low Short High Communication Performance	> 10.20 V P0A9D P0AC7 P0ACC P0AEA P0BC4 P0C35 P0A9E P0ACD P0AC8 P0AEB P0BC5 P0C36 U179C P0A9C P0AC6 P0ACB P0AE9 P0BC3 P0C34	50.00 fails / 60.00 samples at 100ms	Type A, 1 Trips

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Positive Contactor Circuit Stuck Closed	P0AA1	The propulsion positive contactor is a high voltage relay that is used to connect the positive side of the high voltage battery to the positive side of the propulsion bus. This DTC detects when the propulsion positive contactor is stuck closed by monitoring for excessive voltage on the positive side of the propulsion bus when all contactors are commanded open for greater than a calibratable time. The calibratable time is necessary in order to guarantee that the propulsion bus has been fully discharged in order to prevent false failures.	Propulsion Positive Bus Voltage	> 30 Volts	Propulsion Bus Voltage Sensor Propulsion Positive Bus Voltage High Voltage Battery Voltage Sensor All Contactors OR [All Contactors AND Propulsion Bus Voltage]	Not Failed Not Failed Not Failed Open for > 120 seconds Open < 5 % of High Voltage Battery Voltage	4 failures out of 6 samples 12.5 ms /sample 75 ms	Two Trips, Type B

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Precharge Contactor Circuit Stuck Open	P0AE3	The precharge contactor is used to bring two high voltage circuits to the same voltage so that the contactor is prevented from damage prior to closing of the propulsion contactors. This DTC detects when the precharge contactor is stuck open by monitoring for insufficient bus voltage during precharge.	Propulsion Negative Bus Voltage	< 5 V	Precharge Contactor Propulsion Negative Contactor Propulsion Negative Bus Voltage RESS Heating Mode	Closed For 0.090 Seconds Open Not Failed OFF	8 failures out of 10 samples 12.5 ms/sample Executed once per HPC2 Wake up cycle during the precharge 125 ms	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Precharge Contactor Control Circuit	P0AE4	Diagnoses the Precharge Contactor high side driver circuit for circuit faults.	The HPC2 detects that voltage is high during driver OFF state (indicates short to power). It also detects that current is low during driver ON state (indicates open circuit).	Short to Power: Detected while OFF and output voltage is greater than the 12V battery voltage - 0.4V. Open Circuit: Detected while ON and current sense feedback < 194 mA	12V Battery Voltage High Voltage Battery Current	> 10.2V < 1 amp	40 failures out of 50 samples 12.5 ms /sample Continuous 625 ms	Two Trips, Type B

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery 4 Temperature Sensor Performance	P0AE9	Rationality compares temperature with the other sensor values read	Temperature input deviates from the average battery temperature of other Module_Groups	> 20.00 °C	TempRationalityFA (see Fault Bundle Page)	= FALSE	5 seconds out of a 6.7 seconds window	Two Trips, Type B

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Pack Voltage Sense Circuit Correlation	P0AF8	Correlation compares pack voltage sensor to either TPIM Bus Voltage or Charger Bus Voltage	Battery Pack voltage - TPIM Bus Voltage	> 16.00 V	Battery Pack Connected to TPIM No active DTCs:	= TRUE P0ABC P0ABD P1A07 P0ABB P1AEC P1AED P1E28 P1AE9 P1AEB P1AE21 P1AE8 P1AEA P1AE20 U1817	10 seconds out of a 12.5 seconds window	One Trip, Type A
			OR Battery Pack voltage - Charger Bus Voltage	> 16.00 V	Battery Pack Connected to Charger AND Battery Pack Connected to TPIM	= TRUE = FALSE	10 seconds out of a 12.5 seconds window

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Pack Coolant Temperature Sensor Circuit Range/ Performance	P0C43	This diagnostic detects and reports a failure of the sensor when rationalized with other sensors in the vehicle. This diagnostic will run after the soak conditions are met. If the enable criteria are met and if the temperature difference of the compared sensors is greater than their calibrated thresholds, the fail counter will be incremented. If the calibrated fail count threshold is met before the calibrated sample count, the diagnostic will report a FAIL and if not it will report a PASS.	Absolute value of the difference of the Inlet Coolant Temperature to Battery Temperature greater than threshold AND Absolute value of the difference of the Inlet Coolant Temperature to Out Side Air Temperature greater than threshold	>= 23.00 °C >= 22.00 °C	System Voltage Power mode (Bus wake up) No Active DTCs (RESS Pump) No Active DTCs (Inlet Temperature) No Active DTCs (HV Battery Temperature) OAT Arbitrated Status No Active DTCs (Communications) Test complete this trip (TFTKO or TPTKO) Heater duty cycle All HV Battery contactors Open	> 10.20 V > 1.00 s AND < 20.00 s P1E8C, P1E8D, P0C47, P19FD, P19FE, P19FF P0C44, P0C45, P0C46 P0A9C, P0A9D, P0A9E = VALID U0111 = FALSE <= 100.00 % >= 14,400.00 seconds	32.00 fails / 40.00 samples at 250ms	Type B, 2 Trips

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Pack Coolant Temperature Sensor A Circuit Intermittent/ Erratic	P0C46	This diagnostic detects if the temperature sensor circuit has an erratic circuit fault. The string length is the addition of absolute difference between consecutive readings for a calibrated number of samples. If the string length is greater than the calibrated fail threshold, the fail counter will increment. If the calibrated fail count threshold is met before the calibrated sample count, the diagnostic will report a FAIL and if not it will report a PASS. The diagnostic will continue to report as long as the enablement criteria are met.	String Length Where: "String Length" = sum of "Diff" calculated over And where: "Diff" = ABS(Current reading - reading from 250ms previous)	> 64.00 °C 10.00 consecutive samples	System Voltage No DTCs (Coolant Inlet Temperature sensor Status) OORL OORH Loss of Comms	> 10.20 V P0C44 P0C45 U185A	4.00 fails / 5.00 samples at 100ms	Type B, 2 Trips

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Pack Coolant Pump Control Circuit/Open	P0C47	This diagnostic detects if the host controller has detected an OPEN, STG or STV fault on the circuit. If the enable criteria are met and a fault is detected on the circuit, the fail counter will increment. If the calibrated fail count threshold is met before the calibrated sample count, the diagnostic will report a FAIL and if not it will report a PASS. The diagnostic will continue to report as long as the enablement criteria are met.	When Active: Coolant Pump Control line current	<=200mA OR >3A	System Voltage HWIO Pump Control Circuit Status RESS Coolant Pump Enable RESS Pump Commanded PWM	> 10.20 V ≠ Indeterminate = TRUE 5.00 % < command < 95.00 %	40.00 fails / 50.00 samples at 100ms	Type B, 2 Trips
			When Inactive: Coolant Pump Control line current	<=120uA	System Voltage HWIO Pump Control Circuit Status RESS Coolant Pump Enable RESS Pump Commanded PWM	> 10.20 V ≠ Indeterminate = TRUE 5.00 % < command < 95.00 %	40.00 fails / 50.00 samples at 100ms	

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery System Precharge Time Too Long	P0C78	The precharge contactor is used to bring two high voltage circuits to the same voltage so that the propulsion contactors are prevented from damage prior to closing of the propulsion contactors. This DTC sets if the Propulsion Bus Voltage does not get within a percentage band of high voltage battery voltage within a calibratable amount of time during the precharge. If the amount of time expires without reaching the required voltage, then the DTC fails.	Propulsion Bus Voltage	Is less than 95 % or more than 105 % of high voltage battery pack voltage at 0.700 seconds from the start of contactor precharge	High Voltage Battery Voltage Sensor Propulsion Bus Voltage Sensor Propulsion Contactor Status RESS Heating Mode	Valid Valid Precharging OFF	Executed Once Per Precharge 0.700 seconds to fail less than 0.700 to pass	One Trip, Type A

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Battery Charger Hybrid/EV System Discharge Time Too Long	P0D5E	Discharging of high voltage circuits to voltage levels below 60 volts is necessary for safety purposes. This DTC can set two ways. First, this DTC sets if the Charger Bus Voltage does not fall below a calibratable voltage within a calibratable amount of time during a charger discharge. If the amount of time expires without reaching the required voltage, then the DTC fails. Second, this DTC sets if the charger voltage sensor is faulted and the propulsion negative bus voltage is faulted or the negative propulsion contactor is stuck closed. This second fail criteria is necessary in cases where there has been a loss of safety critical information. This DTC latches for safety reasons and further charging and propulsion are disabled until service is performed.	Charger Voltage	>= 60 V	Negative Contactor Charger Contator DTC Not Active 12V Battery Maintenance Mode Charger Voltage	Open Open P0D5E OFF Not Faulted	Executed Once Per any contactor (except precharge contactor) transitioning from closed to open < 4 seconds to pass 4 seconds to fail	One Trip, Type A
			Charger Voltage AND [Propulsion Negative Bus Voltage OR Propulsion Negative Contactor]	Faulted Faulted Faulted (Stuck Closed only)	Negative Contactor Charger Contator DTC Not Active 12V Battery Maintenance Mode Charger Voltage	Open Open P0D5E OFF Not Faulted	4 seconds to fail	
			DTC Clear	Must Send CPID	0x7E4 07 AE 32 02 02	Not Faulted	Cannot Pass Case 2

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AI Circuit Range/ Performance	P1B4B	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AJ Circuit Range/ Performance	P1B4E	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AK Circuit Range/ Performance	P1B51	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AL Circuit Range/ Performance	P1B54	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AM Circuit Range/ Performance	P1B57	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AN Circuit Range/ Performance	P1B5A	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AO Circuit Range/ Performance	P1B5D	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AP Circuit Range/ Performance	P1B60	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AQ Circuit Range/ Performance	P1B63	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AR Circuit Range/ Performance	P1B66	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AS Circuit Range/ Performance	P1B69	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AT Circuit Range/ Performance	P1B6C	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AU Circuit Range/ Performance	P1B6F	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AV Circuit Range/ Performance	P1B72	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AW Circuit Range/ Performance	P1B75	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AX Circuit Range/ Performance	P1B78	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AY Circuit Range/ Performance	P1B7B	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AZ Circuit Range/ Performance	P1B7E	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BA Circuit Range/ Performance	P1B81	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BB Circuit Range/ Performance	P1B84	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BC Circuit Range/ Performance	P1B87	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BD Circuit Range/ Performance	P1B8A	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BE Circuit Range/ Performance	P1B8D	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BF Circuit Range/ Performance	P1B90	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BG Circuit Range/ Performance	P1B93	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BH Circuit Range/ Performance	P1B96	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BI Circuit Range/ Performance	P1B99	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BJ Circuit Range/ Performance	P1B9C	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BK Circuit Range/ Performance	P1B9F	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BL Circuit Range/ Performance	P1BA2	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BM Circuit Range/ Performance	P1BA5	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BN Circuit Range/ Performance	P1BA8	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BO Circuit Range/ Performance	P1BAB	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BP Circuit Range/ Performance	P1BAE	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BQ Circuit Range/ Performance	P1BB1	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BR Circuit Range/ Performance	P1BB4	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BS Circuit Range/ Performance	P1BB7	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BT Circuit Range/ Performance	P1BBA	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BU Circuit Range/ Performance	P1BBD	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BV Circuit Range/ Performance	P1BC0	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BW Circuit Range/ Performance	P1BC3	Rationality compares cell voltage to movement of other cell voltages	Individual Cell voltage movement	Not in same direction as the Average Cell Voltage Movement OR < 0.005 V	CellVoltageRationalityFA (see Fault Bundle Page) Average Cell Voltage Movement No active DTCs:	= FALSE > 0.022 V U185A	7 seconds out of a 8 seconds window	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.

Turn heater off Wait for temperature change	Pump 7.00 % DC and Heater DC 100.00 % for 4.10 s Heater DC based on battery voltage to input 30,600.00 kJ with heater resistance of 70.00 ohms for 90.00 s and and pump DC 7.00 % <= 60.00 s with heater DC 0.00 %		

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
A/C Compressor Motor Speed Performance	P1F0A	The purpose of the performance diagnostic is to detect and report a failure of the compressor. If the compressor is commanded to run and other enable criteria are met, the difference between the commanded speed to the compressor's feedback speed is calculated. The speed difference is filtered and when the difference exceeds the calibrated fault threshold, the diagnostic reports a FAIL. If filtered speed difference does not exceed the calibrated fault threshold, the diagnostic reports a PASS. Compressor Speed Feedback is also diagnosed when the compressor is not being commanded to run. In this case, if the enable criteria are met, and the compressor feedback speed is greater than a calibrateable small number (ORPM), the diagnostic reports a FAIL. If speed feedback does not exceed the calibrated	<p>Case 1 - Monitor HV Compressor Motor Speed - Compressor Motor Commanded to Run Fail (Compressor commanded to run and not meeting requested speed)</p> <p>Compressor Speed Difference RPM Filtered Error</p> <p>OR</p> <p>Compressor Speed Difference RPM Filtered Error</p> <p>(Compressor Speed Difference RPM Filtered Error = Filtered difference between Commanded Speed and Feedback Speed)</p>	<p>> CompON_FaultHi</p> <p>< CompON_FaultLo</p> <p>(See supporting tables for the above threshold values)</p>	<p>ALL the following conditions are met for time:</p> <p>No Active Run/Crank DTCs:</p> <p>No Active Loss of Communication DTCs:</p> <p>System Voltage</p> <p>(Accessory On Signal OR Run Crank Active Signal) for time</p> <p>Serial Communication message \$222: Compressor Sensor Data Alive Rolling Count index value</p> <p>Compressor Speed Request</p> <p>No Active HSRP Sensor DTCs:</p> <p>No Active High Voltage Battery DTCs:</p> <p>No Active High Voltage Contactor DTCs:</p> <p>Climate Control HV Device Shutdown</p>	<p>> 6.00 s</p> <p>P2534, P2535</p> <p>U016B</p> <p>> 10.20 V</p> <p>= True</p> <p>= True</p> <p>> 1.00 s</p> <p>Message Rolling Count value = mod4(Previous Message Rolling Count value + 1)</p> <p>960.00 RPM < Speed Request < 8,600.00 RPM</p> <p>P0532, P0533</p> <p>P0ABB, P0ABC, P0ABD, (U0111 AND U185A)</p> <p>P3061, P0C78, P0AD9, P0AA4, P0D5E, P1EC3</p> <p>= False</p>	<p>Continuous</p> <p>Check every 250ms</p> <p>(Fail time between 28s and 1700s depending on the severity of the problem. The diagnostic will continue to report as long as the enablement criteria are met.	Valve Motor Driver 1 HWIO Sense State	= HIGH	System Voltage Valve	> 10.20 V Must be Stopped or commanded to High position	16 fails / 20 samples at 100ms	Type B, 2 Trips

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Engine Coolant Bypass Valve A Position Sensor Circuit Range/ Performance	P26A5	This diagnostic detects if the valve position feedback has an in-range but invalid region circuit fault. If the enable criteria are met and the feedback position read is not within the calibrated regions, the fail counter will increment. If the calibrated fail count threshold is met before the calibrated sample count, the diagnostic will report a FAIL and if not it will report a PASS. The diagnostic will continue to report as long as the enablement criteria are met.	Valve feedback has exceeded valid range - low end OR Valve feedback has exceeded valid range - high end	5.00 % < Feedback < 30.00 % 70.00 % < Feedback < 95.00 %	Propulsion System Active System Voltage No Active Valve DTCs	= True > 10.20 V P2682, P2683, P26AD, P26AE, P26A6, P26A7	80 fails / 100 samples at 100ms	Type B, 2 Trips

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Engine Coolant Bypass Valve Position Sensor Circuit Low	P26A6	This diagnostic detects if the valve position feedback has an out of range low circuit fault. If the enable criteria are met and the feedback position is below a calibrated threshold, the fail counter will increment. If the calibrated fail count threshold is met before the calibrated sample count, the diagnostic will report a FAIL and if not it will report a PASS. The diagnostic will continue to report as long as the enablement criteria are met.	Valve feedback voltage	< 5.00 % of reference voltage (0.25 V)	System Voltage	> 10.20 V	40 fails / 50 samples at 100ms	Type B, 2 Trips

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Engine Coolant Bypass Valve Position Sensor Circuit High	P26A7	This diagnostic detects if the valve position feedback has an out of range high or an open circuit fault. If the enable criteria are met and the feedback position is above a calibrated threshold, the fail counter will increment. If the calibrated fail count threshold is met before the calibrated sample count, the diagnostic will report a FAIL and if not it will report a PASS. The diagnostic will continue to report as long as the enablement criteria are met.	Valve feedback voltage	> 95.00 % of reference voltage (4.75 V)	System Voltage	> 10.20 V	40 fails / 50 samples at 100ms	Type B, 2 Trips

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Engine Coolant Bypass Valve Position Sensor Stop/ Minimum Stop Performance	P26A9	<p>This performance diagnostic detects if the valve is stuck or an end position learn has failed. An open circuit fault on the valve motor circuit 1 or 2 will also cause valve learn fail. If the enable criteria are met then for each valve move command the commanded position is compared to the feedback position after a calibrated time has been exceeded. If the position difference is greater than a calibrated threshold value then a valve stalled flag is set.</p> <p>Upon valve stalled flag setting a second timer is used to allow a calibrated number of retries for the valve to get to commanded position. If the valve still fails to reach commanded position within a calibrated margin after the retry total time allowed calibrated threshold has been exceeded then a FAIL is reported, else a PASS is reported.</p>	<p>IF Valve has not reached its commanded position THEN attempt valve relearn</p> <p>IF Valve still does not reach its commanded position</p>	<p>< 15.00 s</p> <p>up to 3.00 times</p> <p>< 10.00 s</p>	<p>System Voltage</p> <p>No active Valve or ECT Sensor DTCs</p> <p>Propulsion System Active</p> <p>Engine Coolant Temperature OR Legislated Diagnostics Minimum Engine Coolant Temperature Reached Signal</p>	<p>> 10.20 V</p> <p>P2682, P2683, P26AD, P26AE, P26A6, P26A7, P0116, P0117, P0118, P0119</p> <p>Diag has not already run this key cycle</p> <p>= True</p> <p>> 58.00 °C</p> <p>= True</p>	up to 25.00 secs.	Type B, 2 Trips

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Engine Coolant Bypass Valve Control Circuit 2 Low Voltage	P26AD	This diagnostic detects if the host controller has detected a valve motor drive 2 STG fault on the circuit. If the enable criteria are met and a fault is detected on the circuit, the fail counter will increment. If the calibrated fail count threshold is met before the calibrated sample count, the diagnostic will report a FAIL and if not it will report a PASS. The diagnostic will continue to report as long as the enablement criteria are met.	Valve Motor Driver 2 HWIO Sense State	= LOW	System Voltage Valve	> 10.20 V Must be commanded to High position	4 fails / 5 samples at 100ms	Type B, 2 Trips

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Engine Coolant Bypass Valve Control Circuit 2 High Voltage	P26AE	This diagnostic detects if the host controller has detected a valve motor drive 2 STV fault on the circuit. If the enable criteria are met and a fault is detected on the circuit, the fail counter will increment. If the calibrated fail count threshold is met before the calibrated sample count, the diagnostic will report a FAIL and if not it will report a PASS. The diagnostic will continue to report as long as the enablement criteria are met.	Valve Motor Driver 2 HWIO Sense State	= HIGH	System Voltage Valve	> 10.20 V Must be Stopped or commanded to Low position	16 fails / 20 samples at 100ms	Type B, 2 Trips

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Precharge Current Too High	P3061	This DTC sets if battery current remains over a threshold during precharge for a calibratable amount of time.	High Voltage Battery Current	> 3.00 Amperes	High Voltage Battery Current High Voltage Battery Voltage Contactor Status OR Charger Contactor Status	Not Faulted Not Faulted Precharging	7 consecutive failed samples 12.5 ms /sample 87.50 ms to Fail Successful Precharge to Pass	One Trip, Type A

17 OBDG01 Hybrid Powertrain Control Processor 2 (HPC2 - VICM) Summary Tables

Component/System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Electric A/C Compressor Control Module Lost Communication with Hybrid Powertrain Control Module B	U1860	This diagnostic detects when there is a one-sided loss of communication on the HS GMLAN Bus where the Compressor is able to transmit but not receive serial data from the host controller. This function monitors the instantaneous status reported by the Compressor based on its internal processing of the CAN bus status. If GMLAN message \$236 has not been received by the compressor for more than 250ms, it will transmit a faulted message to the host controller. If the enable criteria are met and faulted message has been received from the compressor, the fail counter will increment. If the calibrated fail count threshold is met before the calibrated sample count, the diagnostic will report a FAIL and if not it will report a PASS. The diagnostic will continue to report as long as the enablement criteria are met.	Case 1 - DTC Fail Compressor Detected Loss of Communication with Host Controller (Fault detected by the compressor CAN Handler - Messages have not been received from the Host Controller for 250ms)	= True	No Active Run/Crank DTCs: No Active Loss of Communication DTCs: System Voltage (Accessory On Signal OR Run Crank Active Signal) for time Serial Communication message \$22E: Compressor Data Packet Alive Rolling Count index value	P2534, P2535 U016B > 10.20 V = True = True > 1.00 s Message Rolling Count value = mod4(Previous Message Rolling Count value + 1)	40.00 fails / 50.00 samples at 100ms loop rate	Type B, 2 Trips
			Case 2 - DTC Pass Compressor Detected Loss of Communication with Host Controller (Compressor received CAN message from the Host controller-Status reported every 100ms by the compressor)	= False,	No Active Run/Crank DTCs: No Active Loss of Communication DTCs: System Voltage (Accessory On Signal OR Run Crank Active Signal) for time Serial Communication message \$22E: Compressor Data Packet Alive Rolling Count index value	P2534, P2535 U016B > 10.20 V = True = True > 1.00 s Message Rolling Count value = mod4(Previous Message Rolling Count value + 1)	less than 40.00 fails / 50.00 samples at 100ms loop rate

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense E Circuit	P0B4F	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense E Circuit Low	P0B51	Sets when cell voltage is detected below threshold	Cell Voltage E	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense E Circuit High	P0B52	Sets when cell voltage is detected above threshold	Cell Voltage E	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense F Circuit	P0B54	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense F Circuit Low	P0B56	Sets when cell voltage is detected below threshold	Cell Voltage F	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense F Circuit High	P0B57	Sets when cell voltage is detected above threshold	Cell Voltage F	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense G Circuit	P0B59	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense G Circuit Low	P0B5B	Sets when cell voltage is detected below threshold	Cell Voltage G	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense G Circuit High	P0B5C	Sets when cell voltage is detected above threshold	Cell Voltage G	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense H Circuit	P0B5E	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense H Circuit Low	P0B60	Sets when cell voltage is detected below threshold	Cell Voltage H	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense H Circuit High	P0B61	Sets when cell voltage is detected above threshold	Cell Voltage H	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense I Circuit	P0B63	Sets when cell voltage is detected open	<p> 1st Cell V – 2nd Cell V or Cell V_gate on</p> <p>Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on</p> <p>Case 2: General Sense Line 1st Cell V – 2nd Cell V </p> <p>Case 3: Common Power Line 1st Cell V – 2nd Cell V </p> <p>Case 4: Common Ground Line 1st Cell V – 2nd Cell V </p> <p>Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on</p> <p>Case 6: Splice Line Splice Cap Voltage</p> <p>Case 7: BusBar Splice Splice Cap Voltage</p>	<p>Case 1: Cell V_On Gate < 36mV</p> <p>Case 2: 1st Cell V – 2nd Cell V >= 1.3V</p> <p>Case 3 : 1st Cell V – 2nd Cell V >= 1.3V</p> <p>Case 4 : 1st Cell V – 2nd Cell V >= 1.3V</p> <p>Case 5 : Cell V_On Gate < 36mV</p> <p>Case 6: Splice Cap Voltage > 0.1V</p> <p>Case 7: Splice Cap Voltage > 0.5V</p>	<p>Diagnostic Enable</p> <p>Run/Crank, Accessory/Run or HVEM EB Comm Enable</p> <p>No Active DTCs associated with Slave Loss of Comm</p> <p>No Active DTCs associated with Open Sense Line</p> <p>2nd Protection Self Test Diagnostic</p> <p>No Active DTCs associated with Slave Cell Balancing Fault</p> <p>No Active DTCs associated with Slave Internal Performance</p>	<p>True</p> <p>True</p> <p>Slave Loss of Comm Fault</p> <p>Open Sense Line Fault</p> <p>Not Running</p> <p>Slave Cell Balancing Fault</p> <p>Slave Internal Performance Fault</p>	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense I Circuit Low	P0B65	Sets when cell voltage is detected below threshold	Cell Voltage I	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense I Circuit High	P0B66	Sets when cell voltage is detected above threshold	Cell Voltage I	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense J Circuit	P0B68	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense J Circuit Low	P0B6A	Sets when cell voltage is detected below threshold	Cell Voltage J	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense J Circuit High	P0B6B	Sets when cell voltage is detected above threshold	Cell Voltage J	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense K Circuit	P0B6D	Sets when cell voltage is detected open	<p> 1st Cell V – 2nd Cell V or Cell V_gate on</p> <p>Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on</p> <p>Case 2: General Sense Line 1st Cell V – 2nd Cell V </p> <p>Case 3: Common Power Line 1st Cell V – 2nd Cell V </p> <p>Case 4: Common Ground Line 1st Cell V – 2nd Cell V </p> <p>Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on</p> <p>Case 6: Splice Line Splice Cap Voltage</p> <p>Case 7: BusBar Splice Splice Cap Voltage</p>	<p>Case 1: Cell V_On Gate < 36mV</p> <p>Case 2: 1st Cell V – 2nd Cell V >= 1.3V</p> <p>Case 3 : 1st Cell V – 2nd Cell V >= 1.3V</p> <p>Case 4 : 1st Cell V – 2nd Cell V >= 1.3V</p> <p>Case 5 : Cell V_On Gate < 36mV</p> <p>Case 6: Splice Cap Voltage > 0.1V</p> <p>Case 7: Splice Cap Voltage > 0.5V</p>	<p>Diagnostic Enable</p> <p>Run/Crank, Accessory/Run or HVEM EB Comm Enable</p> <p>No Active DTCs associated with Slave Loss of Comm</p> <p>No Active DTCs associated with Open Sense Line</p> <p>2nd Protection Self Test Diagnostic</p> <p>No Active DTCs associated with Slave Cell Balancing Fault</p> <p>No Active DTCs associated with Slave Internal Performance</p>	<p>True</p> <p>True</p> <p>Slave Loss of Comm Fault</p> <p>Open Sense Line Fault</p> <p>Not Running</p> <p>Slave Cell Balancing Fault</p> <p>Slave Internal Performance Fault</p>	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense K Circuit Low	P0B6F	Sets when cell voltage is detected below threshold	Cell Voltage K	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense K Circuit High	P0B70	Sets when cell voltage is detected above threshold	Cell Voltage K	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense L Circuit	P0B72	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense L Circuit Low	P0B74	Sets when cell voltage is detected below threshold	Cell Voltage L	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense L Circuit High	P0B75	Sets when cell voltage is detected above threshold	Cell Voltage L	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense M Circuit	P0B77	Sets when cell voltage is detected open	<p> 1st Cell V – 2nd Cell V or Cell V_gate on</p> <p>Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on</p> <p>Case 2: General Sense Line 1st Cell V – 2nd Cell V </p> <p>Case 3: Common Power Line 1st Cell V – 2nd Cell V </p> <p>Case 4: Common Ground Line 1st Cell V – 2nd Cell V </p> <p>Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on</p> <p>Case 6: Splice Line Splice Cap Voltage</p> <p>Case 7: BusBar Splice Splice Cap Voltage</p>	<p>Case 1: Cell V_On Gate < 36mV</p> <p>Case 2: 1st Cell V – 2nd Cell V >= 1.3V</p> <p>Case 3 : 1st Cell V – 2nd Cell V >= 1.3V</p> <p>Case 4 : 1st Cell V – 2nd Cell V >= 1.3V</p> <p>Case 5 : Cell V_On Gate < 36mV</p> <p>Case 6: Splice Cap Voltage > 0.1V</p> <p>Case 7: Splice Cap Voltage > 0.5V</p>	<p>Diagnostic Enable</p> <p>Run/Crank, Accessory/ Run or HVEM EB Comm Enable</p> <p>No Active DTCs associated with Slave Loss of Comm</p> <p>No Active DTCs associated with Open Sense Line</p> <p>2nd Protection Self Test Diagnostic</p> <p>No Active DTCs associated with Slave Cell Balancing Fault</p> <p>No Active DTCs associated with Slave Internal Performance</p>	<p>True</p> <p>True</p> <p>Slave Loss of Comm Fault</p> <p>Open Sense Line Fault</p> <p>Not Running</p> <p>Slave Cell Balancing Fault</p> <p>Slave Internal Performance Fault</p>	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense M Circuit Low	P0B79	Sets when cell voltage is detected below threshold	Cell Voltage M	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense M Circuit High	P0B7A	Sets when cell voltage is detected above threshold	Cell Voltage M	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense N Circuit	P0B7C	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense N Circuit Low	P0B7E	Sets when cell voltage is detected below threshold	Cell Voltage N	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense N Circuit High	P0B7F	Sets when cell voltage is detected above threshold	Cell Voltage N	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense O Circuit	P0B81	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense O Circuit Low	P0B83	Sets when cell voltage is detected below threshold	Cell Voltage O	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense O Circuit High	P0B84	Sets when cell voltage is detected above threshold	Cell Voltage O	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense P Circuit	P0B86	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense P Circuit Low	P0B88	Sets when cell voltage is detected below threshold	Cell Voltage P	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense P Circuit High	P0B89	Sets when cell voltage is detected above threshold	Cell Voltage P	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense Q Circuit	P0B8B	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense Q Circuit Low	P0B8D	Sets when cell voltage is detected below threshold	Cell Voltage Q	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense Q Circuit High	P0B8E	Sets when cell voltage is detected above threshold	Cell Voltage Q	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense R Circuit	P0B90	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense R Circuit Low	P0B92	Sets when cell voltage is detected below threshold	Cell Voltage R	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense R Circuit High	P0B93	Sets when cell voltage is detected above threshold	Cell Voltage R	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense S Circuit	P0B95	Sets when cell voltage is detected open	<p> 1st Cell V – 2nd Cell V or Cell V_gate on</p> <p>Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on</p> <p>Case 2: General Sense Line 1st Cell V – 2nd Cell V </p> <p>Case 3: Common Power Line 1st Cell V – 2nd Cell V </p> <p>Case 4: Common Ground Line 1st Cell V – 2nd Cell V </p> <p>Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on</p> <p>Case 6: Splice Line Splice Cap Voltage</p> <p>Case 7: BusBar Splice Splice Cap Voltage</p>	<p>Case 1: Cell V_On Gate < 36mV</p> <p>Case 2: 1st Cell V – 2nd Cell V >= 1.3V</p> <p>Case 3 : 1st Cell V – 2nd Cell V >= 1.3V</p> <p>Case 4 : 1st Cell V – 2nd Cell V >= 1.3V</p> <p>Case 5 : Cell V_On Gate < 36mV</p> <p>Case 6: Splice Cap Voltage > 0.1V</p> <p>Case 7: Splice Cap Voltage > 0.5V</p>	<p>Diagnostic Enable</p> <p>Run/Crank, Accessory/ Run or HVEM EB Comm Enable</p> <p>No Active DTCs associated with Slave Loss of Comm</p> <p>No Active DTCs associated with Open Sense Line</p> <p>2nd Protection Self Test Diagnostic</p> <p>No Active DTCs associated with Slave Cell Balancing Fault</p> <p>No Active DTCs associated with Slave Internal Performance</p>	<p>True</p> <p>True</p> <p>Slave Loss of Comm Fault</p> <p>Open Sense Line Fault</p> <p>Not Running</p> <p>Slave Cell Balancing Fault</p> <p>Slave Internal Performance Fault</p>	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense S Circuit Low	P0B97	Sets when cell voltage is detected below threshold	Cell Voltage S	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense S Circuit High	P0B98	Sets when cell voltage is detected above threshold	Cell Voltage S	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense T Circuit	P0B9A	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense T Circuit Low	P0B9C	Sets when cell voltage is detected below threshold	Cell Voltage T	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense T Circuit High	P0B9D	Sets when cell voltage is detected above threshold	Cell Voltage T	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense U Circuit	P0B9F	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense U Circuit Low	P0BA1	Sets when cell voltage is detected below threshold	Cell Voltage U	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense U Circuit High	P0BA2	Sets when cell voltage is detected above threshold	Cell Voltage U	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense V Circuit	P0BA4	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense V Circuit Low	P0BA6	Sets when cell voltage is detected below threshold	Cell Voltage V	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense V Circuit High	P0BA7	Sets when cell voltage is detected above threshold	Cell Voltage V	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense W Circuit	P0BA9	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense W Circuit Low	P0BAB	Sets when cell voltage is detected below threshold	Cell Voltage W	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense W Circuit High	P0BAC	Sets when cell voltage is detected above threshold	Cell Voltage W	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense X Circuit	P0BAE	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense X Circuit Low	P0BB0	Sets when cell voltage is detected below threshold	Cell Voltage X	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense X Circuit High	P0BB1	Sets when cell voltage is detected above threshold	Cell Voltage X	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense Y Circuit	P0BB3	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense Y Circuit Low	P0BB5	Sets when cell voltage is detected below threshold	Cell Voltage Y	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense Y Circuit High	P0BB6	Sets when cell voltage is detected above threshold	Cell Voltage Y	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense Z Circuit	P0BB8	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense Z Circuit Low	P0BBA	Sets when cell voltage is detected below threshold	Cell Voltage Z	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense Z Circuit High	P0BBB	Sets when cell voltage is detected above threshold	Cell Voltage Z	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Temperature Sensor E Circuit Low	P0BC4	Sets when Temperature Sensor 5 falls below a threshold	Temperature Sensor 5	> 87.5C (ADC Count < 135)	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True True	1.4 seconds in a 2 second window	Type B, 2 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Temperature Sensor E Circuit High	P0BC5	Sets when Temperature Sensor 5 falls above a threshold	Temperature Sensor 5	< -40C (ADC Count > 4008)	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True True	1.4 seconds in a 2 second window	Type B, 2 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Temperature Sensor F Circuit Low	P0C35	Sets when Temperature Sensor 6 falls below a threshold	Temperature Sensor 6	> 87.5C (ADC Count < 135)	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True True	1.4 seconds in a 2 second window	Type B, 2 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Temperature Sensor F Circuit High	P0C36	Sets when Temperature Sensor 6 falls above a threshold	Temperature Sensor 6	< -40C (ADC Count > 4008)	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True True	1.4 seconds in a 2 second window	Type B, 2 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Pack Coolant Temperature Sensor Circuit Low	P0C44	Sets when Inlet Coolant Temp Sensor falls below a Threshold	Inlet Temp	$\geq 87.9C$ (ADC Count ≤ 133)	Diagnostic Enable	True	1.75 seconds in a 2.5 seconds window	Type B, 2 Trips
			DTC Pass	Inlet Temp $< 87.9C$ (ADC Count > 133)	Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True		

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Pack Coolant Temperature Sensor Circuit High	P0C45	Sets when Inlet Coolant Temp Sensor goes above a Threshold	Inlet Temp	< -40C (ADC Count > 3890)	Diagnostic Enable	True	1.75 seconds in a 2.5 seconds window	Type B, 2 Trips
			DTC Pass	Inlet Temp >= -40C (ADC Count <= 3890)	Run/Crank, Accessory/ Run or HVEM EB Comm Enable VITM System Voltage	True >= 9V		

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Battery Energy Control Module Random Accessories Memory (RAM)	P1A05	RAM Read Write function Failed	RAM Read not Equal to RAM Written	1	Diagnostic Enable	True	At power up	Type A, 1 Trips
					Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True		
					VITM Initialization Status Extended	Initializing		
			DTC Pass	1	VITM System Voltage	>= 9V	At power up	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Battery Energy Control Module Read Only Memory (ROM)	P1A06	Flash ROM Checksum method	Flash ROM Checksum Value Calculated is Different than Stored	1	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable VITM Initalization Status Extended VITM System Voltage	True True Initializing >= 9V	At power up	Type A, 1 Trips
			DTC Pass	1			At power up	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Battery Energy Control Module 5 Volt Reference Circuit	P1A07	Sets when 5V VITM reference voltage is out of range	5V Reference Value (Circuit for Reference Diagnostic, Shunt Regulator) DTC Pass	5V Reference Value < 2.8V or 5V Reference Value > 3.2V 2.8V <= 5V Reference Value <= 3.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable VITM System Voltage	True True >= 9V	600 ms in a 1 second window 1 Second	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Battery Energy Control Module System Voltage Low	P1A0C	If 12V System Voltage is below Threshold	12V System Voltage	< 9.0V	Diagnostic Enable	True	5 seconds in a 6 seconds window	Type C, No SVS
			DTC Pass	12V System Voltage >= 9.0V	Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True	6 Seconds	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Battery Energy Control Module System Voltage High	P1A0D	If 12V System Voltage is above Threshold	12V System Voltage DTC Pass	>18.5V 12V System Voltage >= 18.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True True	5 seconds in a 6 seconds window 6 Seconds	Type C, No SVS

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Battery Energy Control Module Ignition Switch Run/ Start Position Circuit Low	P1A5E	If RunCrank input state is below Threshold and RunCrank Received Serial Data State = Active	RunCrank Hardwire Input and Serial Data signal	RunCrank Input < 5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable VITM System Voltage No Active DTC for Battery Energy Control Module Lost Communication with Hybrid Processor Control Module B on Bus H	True True >= 9V U185B	5 seconds in a 6 second window	Type A, 1 Trips
			DTC Pass	RunCrank Input >= 5V			6 seconds	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Battery Energy Control Module Ignition Switch Run/ Start Position Circuit High	P1A5F	If RunCrank input state is above Threshold and RunCrank Received Serial Data State = Inactive	RunCrank Hardwire Input and Serial Data signal	RunCrank Input >= 5V	Diagnostic Enable	True	5 seconds in a 6 second window	Type A, 1 Trips
			DTC Pass	RunCrank Input < 5V	Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True		
					VITM System Voltage			
					No Active DTC for Battery Energy Control Module Lost Communication with Hybrid Processor Control Module B on Bus H			

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Battery Energy Control Module Ignition Switch Accessory Position Circuit Low	P1A60	If Accessory input state is below Threshold and received serial data Propulsion System Active state = True and Accessory Diagnostic Delay is Expired	Accessory Hardwire Input	Accessory Input < 5V	Diagnostic Enable	True	0.1 seconds (8 * 0.0125)	Type B, 2 Trips
					Run/Crank, Accessory/Run or HVEM EB Comm Enable	True		
					No Active DTC for Battery Energy Control Module Lost Communication With with HCP (TPIM) on Bus A (HS GMLAN Bus)	U1885		
					VITM System Voltage	>= 9V		
			DTC Pass	Accessory Input >= 5V	Propulsion System Active	True	0.1 seconds (8 * 0.0125)	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Battery Energy Control Module Hybrid Battery Voltage Isolation Sensor Circuit	P1AE6	Sets when Isolation Ckt components detected open/short	Active Isolation Circuit	If $K \leq 0.985$ or $K \geq 1.015$	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable VICM Isolation Start Request VITM System Voltage No Active DTC for Battery Energy Control Module Lost Communication with Hybrid Processor Control Module B on Bus H	True True True > 9V U185B	30s	Type A, 1 Trips
			DTC Pass	$0.985 < K < 1.015$ (diagnose open sw and/or open/short in circuit resistors) Or $\{ \{ \text{abs}(AD1 - AD2) < 30\text{mV} \} \text{ or } \{ \text{abs}(BD1 - BD2) < 30\text{mV} \} \}$ (diagnose shorted sw)			30s	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AA Circuit Low	P1B17	Sets when cell voltage is detected below threshold	Cell Voltage AA	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line	True True U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624 P0B3B, P0B40, P0B45, P0B4A, P0B4F, P0B54, P0B59, P0B5E, P0B63, P0B68, P0B6D, P0B72, P0B77, P0B7C, P0B81, P0B86, P0B8B, P0B90, P0B95, P0B9A, P0B9F, P0BA4, P0BA9, P0BAE, P0BB3, P0BB8, P1B28, P1B29, P1B2A, P1B2B, P1B2C, P1B2D, P1E4C, P1E4D, P1E4E, P1E4F, P1E50, P1E51, P1E52, P1E53, P1E54, P1E55, P1E56, P1E57, P1E58, P1E59, P1E5A, P1E5B, P1E5C, P1E5D, P1E5E, P1E5F, P1E60, P1E61, P1E62, P1E63, P1E64, P1E65, P1E66, P1E67, P1E68, P1E69, P1E6A, P1E6B, P1E6C, P1E6D P1E6E, P1E6F, P1E70, P1E71, P1E72, P1E73, P1E74, P1E75, P1E76, P1E77, P1E78, P1E79, P1E7A, P1E7B, P1E7C, P1E7D, P1E7E, P1E7F, P1E80, P1E81, P1E82, P1E83, P1E84, P1E86,	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
					2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	P1E87, P1E88, P1E89, P1E8A Not Running P1E92, P1E98, P1E9E, P1EA4, P1FC9, P1FCA, P1FCB, P1FCC, P1FCD, P1FCE, P3036, P3041 P1E8E, P1E94, P1E9A, P1EA0, P1FBD, P1FBE, P1FBF, P1FC0, P1FC1, P1FC2, P3034, P303F		

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AA Circuit High	P1B18	Sets when cell voltage is detected above threshold	Cell Voltage AA	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AB Circuit Low	P1B1A	Sets when cell voltage is detected below threshold	Cell Voltage AB	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AB Circuit High	P1B1B	Sets when cell voltage is detected above threshold	Cell Voltage AB	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AC Circuit Low	P1B1D	Sets when cell voltage is detected below threshold	Cell Voltage AC	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AC Circuit High	P1B1E	Sets when cell voltage is detected above threshold	Cell Voltage AC	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AD Circuit Low	P1B20	Sets when cell voltage is detected below threshold	Cell Voltage AD	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AD Circuit High	P1B21	Sets when cell voltage is detected above threshold	Cell Voltage AD	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AE Circuit Low	P1B23	Sets when cell voltage is detected below threshold	Cell Voltage AE	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AE Circuit High	P1B24	Sets when cell voltage is detected above threshold	Cell Voltage AE	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AF Circuit Low	P1B26	Sets when cell voltage is detected below threshold	Cell Voltage AF	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AF Circuit High	P1B27	Sets when cell voltage is detected above threshold	Cell Voltage AF	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AA Circuit	P1B28	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AB Circuit	P1B29	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AC Circuit	P1B2A	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AD Circuit	P1B2B	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AE Circuit	P1B2C	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AF Circuit	P1B2D	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AG Circuit Low	P1B46	Sets when cell voltage is detected below threshold	Cell Voltage AG	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AG Circuit High	P1B47	Sets when cell voltage is detected above threshold	Cell Voltage AG	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AH Circuit Low	P1B49	Sets when cell voltage is detected below threshold	Cell Voltage AH	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AH Circuit High	P1B4A	Sets when cell voltage is detected above threshold	Cell Voltage AH	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AI Circuit Low	P1B4C	Sets when cell voltage is detected below threshold	Cell Voltage AI	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AI Circuit High	P1B4D	Sets when cell voltage is detected above threshold	Cell Voltage AI	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AJ Circuit Low	P1B4F	Sets when cell voltage is detected below threshold	Cell Voltage AJ	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AJ Circuit High	P1B50	Sets when cell voltage is detected above threshold	Cell Voltage AJ	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AK Circuit Low	P1B52	Sets when cell voltage is detected below threshold	Cell Voltage AK	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AK Circuit High	P1B53	Sets when cell voltage is detected above threshold	Cell Voltage AK	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AL Circuit Low	P1B55	Sets when cell voltage is detected below threshold	Cell Voltage AL	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AL Circuit High	P1B56	Sets when cell voltage is detected above threshold	Cell Voltage AL	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AM Circuit Low	P1B58	Sets when cell voltage is detected below threshold	Cell Voltage AM	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AM Circuit High	P1B59	Sets when cell voltage is detected above threshold	Cell Voltage AM	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AN Circuit Low	P1B5B	Sets when cell voltage is detected below threshold	Cell Voltage AN	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AN Circuit High	P1B5C	Sets when cell voltage is detected above threshold	Cell Voltage AN	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AO Circuit Low	P1B5E	Sets when cell voltage is detected below threshold	Cell Voltage AO	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AO Circuit High	P1B5F	Sets when cell voltage is detected above threshold	Cell Voltage AO	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AP Circuit Low	P1B61	Sets when cell voltage is detected below threshold	Cell Voltage AP	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AP Circuit High	P1B62	Sets when cell voltage is detected above threshold	Cell Voltage AP	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AQ Circuit Low	P1B64	Sets when cell voltage is detected below threshold	Cell Voltage AQ	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AQ Circuit High	P1B65	Sets when cell voltage is detected above threshold	Cell Voltage AQ	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AR Circuit Low	P1B67	Sets when cell voltage is detected below threshold	Cell Voltage AR	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AR Circuit High	P1B68	Sets when cell voltage is detected above threshold	Cell Voltage AR	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AS Circuit Low	P1B6A	Sets when cell voltage is detected below threshold	Cell Voltage AS	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AS Circuit High	P1B6B	Sets when cell voltage is detected above threshold	Cell Voltage AS	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AT Circuit Low	P1B6D	Sets when cell voltage is detected below threshold	Cell Voltage AT	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AT Circuit High	P1B6E	Sets when cell voltage is detected above threshold	Cell Voltage AT	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AU Circuit Low	P1B70	Sets when cell voltage is detected below threshold	Cell Voltage AU	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AU Circuit High	P1B71	Sets when cell voltage is detected above threshold	Cell Voltage AU	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AV Circuit Low	P1B73	Sets when cell voltage is detected below threshold	Cell Voltage AV	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AV Circuit High	P1B74	Sets when cell voltage is detected above threshold	Cell Voltage AV	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AW Circuit Low	P1B76	Sets when cell voltage is detected below threshold	Cell Voltage AW	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AW Circuit High	P1B77	Sets when cell voltage is detected above threshold	Cell Voltage AW	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AX Circuit Low	P1B79	Sets when cell voltage is detected below threshold	Cell Voltage AX	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AX Circuit High	P1B7A	Sets when cell voltage is detected above threshold	Cell Voltage AX	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AY Circuit Low	P1B7C	Sets when cell voltage is detected below threshold	Cell Voltage AY	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AY Circuit High	P1B7D	Sets when cell voltage is detected above threshold	Cell Voltage AY	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AZ Circuit Low	P1B7F	Sets when cell voltage is detected below threshold	Cell Voltage AZ	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AZ Circuit High	P1B80	Sets when cell voltage is detected above threshold	Cell Voltage AZ	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BA Circuit Low	P1B82	Sets when cell voltage is detected below threshold	Cell Voltage BA	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BA Circuit High	P1B83	Sets when cell voltage is detected above threshold	Cell Voltage BA	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BB Circuit Low	P1B85	Sets when cell voltage is detected below threshold	Cell Voltage BB	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BB Circuit High	P1B86	Sets when cell voltage is detected above threshold	Cell Voltage BB	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BC Circuit Low	P1B88	Sets when cell voltage is detected below threshold	Cell Voltage BC	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BC Circuit High	P1B89	Sets when cell voltage is detected above threshold	Cell Voltage BC	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BD Circuit Low	P1B8B	Sets when cell voltage is detected below threshold	Cell Voltage BD	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BD Circuit High	P1B8C	Sets when cell voltage is detected above threshold	Cell Voltage BD	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BE Circuit Low	P1B8E	Sets when cell voltage is detected below threshold	Cell Voltage BE	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BE Circuit High	P1B8F	Sets when cell voltage is detected above threshold	Cell Voltage BE	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BF Circuit Low	P1B91	Sets when cell voltage is detected below threshold	Cell Voltage BF	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BF Circuit High	P1B92	Sets when cell voltage is detected above threshold	Cell Voltage BF	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BG Circuit Low	P1B94	Sets when cell voltage is detected below threshold	Cell Voltage BG	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BG Circuit High	P1B95	Sets when cell voltage is detected above threshold	Cell Voltage BG	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BH Circuit Low	P1B97	Sets when cell voltage is detected below threshold	Cell Voltage BH	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BH Circuit High	P1B98	Sets when cell voltage is detected above threshold	Cell Voltage BH	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BI Circuit Low	P1B9A	Sets when cell voltage is detected below threshold	Cell Voltage BI	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BI Circuit High	P1B9B	Sets when cell voltage is detected above threshold	Cell Voltage BI	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BJ Circuit Low	P1B9D	Sets when cell voltage is detected below threshold	Cell Voltage BJ	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BJ Circuit High	P1B9E	Sets when cell voltage is detected above threshold	Cell Voltage BJ	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BK Circuit Low	P1BA0	Sets when cell voltage is detected below threshold	Cell Voltage BK	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BK Circuit High	P1BA1	Sets when cell voltage is detected above threshold	Cell Voltage BK	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BL Circuit Low	P1BA3	Sets when cell voltage is detected below threshold	Cell Voltage BL	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BL Circuit High	P1BA4	Sets when cell voltage is detected above threshold	Cell Voltage BL	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BM Circuit Low	P1BA6	Sets when cell voltage is detected below threshold	Cell Voltage BM	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BM Circuit High	P1BA7	Sets when cell voltage is detected above threshold	Cell Voltage BM	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BN Circuit Low	P1BA9	Sets when cell voltage is detected below threshold	Cell Voltage BN	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BN Circuit High	P1BAA	Sets when cell voltage is detected above threshold	Cell Voltage BN	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BO Circuit Low	P1BAC	Sets when cell voltage is detected below threshold	Cell Voltage BO	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BO Circuit High	P1BAD	Sets when cell voltage is detected above threshold	Cell Voltage BO	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BP Circuit Low	P1BAF	Sets when cell voltage is detected below threshold	Cell Voltage BP	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BP Circuit High	P1BB0	Sets when cell voltage is detected above threshold	Cell Voltage BP	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BQ Circuit Low	P1BB2	Sets when cell voltage is detected below threshold	Cell Voltage BQ	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BQ Circuit High	P1BB3	Sets when cell voltage is detected above threshold	Cell Voltage BQ	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BR Circuit Low	P1BB5	Sets when cell voltage is detected below threshold	Cell Voltage BR	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BR Circuit High	P1BB6	Sets when cell voltage is detected above threshold	Cell Voltage BR	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BS Circuit Low	P1BB8	Sets when cell voltage is detected below threshold	Cell Voltage BS	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BS Circuit High	P1BB9	Sets when cell voltage is detected above threshold	Cell Voltage BS	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BT Circuit Low	P1BBB	Sets when cell voltage is detected below threshold	Cell Voltage BT	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BT Circuit High	P1BBC	Sets when cell voltage is detected above threshold	Cell Voltage BT	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BU Circuit Low	P1BBE	Sets when cell voltage is detected below threshold	Cell Voltage BU	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BU Circuit High	P1BBF	Sets when cell voltage is detected above threshold	Cell Voltage BU	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BV Circuit Low	P1BC1	Sets when cell voltage is detected below threshold	Cell Voltage BV	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BV Circuit High	P1BC2	Sets when cell voltage is detected above threshold	Cell Voltage BV	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BW Circuit Low	P1BC4	Sets when cell voltage is detected below threshold	Cell Voltage BW	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BW Circuit High	P1BC5	Sets when cell voltage is detected above threshold	Cell Voltage BW	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BX Circuit Low	P1BC7	Sets when cell voltage is detected below threshold	Cell Voltage BX	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BX Circuit High	P1BC8	Sets when cell voltage is detected above threshold	Cell Voltage BX	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BY Circuit Low	P1BCA	Sets when cell voltage is detected below threshold	Cell Voltage BY	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BY Circuit High	P1BCB	Sets when cell voltage is detected above threshold	Cell Voltage BY	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BZ Circuit Low	P1BCD	Sets when cell voltage is detected below threshold	Cell Voltage BZ	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BZ Circuit High	P1BCE	Sets when cell voltage is detected above threshold	Cell Voltage BZ	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CA Circuit Low	P1BD0	Sets when cell voltage is detected below threshold	Cell Voltage CA	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CA Circuit High	P1BD1	Sets when cell voltage is detected above threshold	Cell Voltage CA	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CB Circuit Low	P1BD3	Sets when cell voltage is detected below threshold	Cell Voltage CB	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CB Circuit High	P1BD4	Sets when cell voltage is detected above threshold	Cell Voltage CB	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CC Circuit Low	P1BD6	Sets when cell voltage is detected below threshold	Cell Voltage CC	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CC Circuit High	P1BD7	Sets when cell voltage is detected above threshold	Cell Voltage CC	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CD Circuit Low	P1BD9	Sets when cell voltage is detected below threshold	Cell Voltage CD	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CD Circuit High	P1BDA	Sets when cell voltage is detected above threshold	Cell Voltage CD	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CE Circuit Low	P1BDC	Sets when cell voltage is detected below threshold	Cell Voltage CE	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CE Circuit High	P1BDD	Sets when cell voltage is detected above threshold	Cell Voltage CE	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CF Circuit Low	P1BDF	Sets when cell voltage is detected below threshold	Cell Voltage CF	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CF Circuit High	P1BE0	Sets when cell voltage is detected above threshold	Cell Voltage CF	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CG Circuit Low	P1BE2	Sets when cell voltage is detected below threshold	Cell Voltage CF	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CG Circuit High	P1BE3	Sets when cell voltage is detected above threshold	Cell Voltage CG	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CH Circuit Low	P1BE5	Sets when cell voltage is detected below threshold	Cell Voltage CH	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CH Circuit High	P1BE6	Sets when cell voltage is detected above threshold	Cell Voltage CH	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CI Circuit Low	P1BE8	Sets when cell voltage is detected below threshold	Cell Voltage CI	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CI Circuit High	P1BE9	Sets when cell voltage is detected above threshold	Cell Voltage CI	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CJ Circuit Low	P1BEB	Sets when cell voltage is detected below threshold	Cell Voltage CJ	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CJ Circuit High	P1BEC	Sets when cell voltage is detected above threshold	Cell Voltage CJ	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CK Circuit Low	P1BEE	Sets when cell voltage is detected below threshold	Cell Voltage CK	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CK Circuit High	P1BEF	Sets when cell voltage is detected above threshold	Cell Voltage CK	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CL Circuit Low	P1BF1	Sets when cell voltage is detected below threshold	Cell Voltage CL	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CL Circuit High	P1BF2	Sets when cell voltage is detected above threshold	Cell Voltage CL	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CM Circuit Low	P1BF4	Sets when cell voltage is detected below threshold	Cell Voltage CM	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CM Circuit High	P1BF5	Sets when cell voltage is detected above threshold	Cell Voltage CM	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CN Circuit Low	P1BF7	Sets when cell voltage is detected below threshold	Cell Voltage CN	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CN Circuit High	P1BF8	Sets when cell voltage is detected above threshold	Cell Voltage CN	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CO Circuit Low	P1BFA	Sets when cell voltage is detected below threshold	Cell Voltage CO	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CO Circuit High	P1BFB	Sets when cell voltage is detected above threshold	Cell Voltage CO	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CP Circuit Low	P1BFD	Sets when cell voltage is detected below threshold	Cell Voltage CP	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CP Circuit High	P1BFE	Sets when cell voltage is detected above threshold	Cell Voltage CP	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CQ Circuit Low	P1E02	Sets when cell voltage is detected below threshold	Cell Voltage CQ	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CQ Circuit High	P1E03	Sets when cell voltage is detected above threshold	Cell Voltage CQ	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CR Circuit Low	P1E05	Sets when cell voltage is detected below threshold	Cell Voltage CR	<= 0.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CR Circuit High	P1E06	Sets when cell voltage is detected above threshold	Cell Voltage CR	>= 4.8V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AG Circuit	P1E4C	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AH Circuit	P1E4D	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AI Circuit	P1E4E	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AJ Circuit	P1E4F	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AK Circuit	P1E50	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AL Circuit	P1E51	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AM Circuit	P1E52	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AN Circuit	P1E53	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AO Circuit	P1E54	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AP Circuit	P1E55	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AQ Circuit	P1E56	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AR Circuit	P1E57	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AS Circuit	P1E58	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AT Circuit	P1E59	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AU Circuit	P1E5A	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AV Circuit	P1E5B	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AW Circuit	P1E5C	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AX Circuit	P1E5D	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AY Circuit	P1E5E	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense AZ Circuit	P1E5F	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BA Circuit	P1E60	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BB Circuit	P1E61	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BC Circuit	P1E62	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BD Circuit	P1E63	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BE Circuit	P1E64	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BF Circuit	P1E65	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BG Circuit	P1E66	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BH Circuit	P1E67	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BI Circuit	P1E68	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BJ Circuit	P1E69	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BK Circuit	P1E6A	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BL Circuit	P1E6B	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BM Circuit	P1E6C	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BN Circuit	P1E6D	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense BO Circuit	P1E6E	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CC Circuit	P1E7C	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CD Circuit	P1E7D	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CE Circuit	P1E7E	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CF Circuit	P1E7F	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CG Circuit	P1E80	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CH Circuit	P1E81	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CI Circuit	P1E82	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CJ Circuit	P1E83	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CK Circuit	P1E84	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CL Circuit	P1E85	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CM Circuit	P1E86	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CN Circuit	P1E87	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CO Circuit	P1E88	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CP Circuit	P1E89	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CQ Circuit	P1E8A	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Voltage Sense CR Circuit	P1E8B	Sets when cell voltage is detected open	1st Cell V – 2nd Cell V or Cell V_gate on Case 1: Single Power Line - Positive side Affected Cell Voltage when Cell Balance Gate is on Case 2: General Sense Line 1st Cell V – 2nd Cell V Case 3: Common Power Line 1st Cell V – 2nd Cell V Case 4: Common Ground Line 1st Cell V – 2nd Cell V Case 5: Single Ground Line Affected Cell Voltage when Cell Balance Gate is on Case 6: Splice Line Splice Cap Voltage Case 7: BusBar Splice Splice Cap Voltage	Case 1: Cell V_On Gate < 36mV Case 2: 1st Cell V – 2nd Cell V >= 1.3V Case 3 : 1st Cell V – 2nd Cell V >= 1.3V Case 4 : 1st Cell V – 2nd Cell V >= 1.3V Case 5 : Cell V_On Gate < 36mV Case 6: Splice Cap Voltage > 0.1V Case 7: Splice Cap Voltage > 0.5V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Cell Balancing Fault No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Open Sense Line Fault Not Running Slave Cell Balancing Fault Slave Internal Performance Fault	0.6 seconds out of a 0.6 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module A Performance	P1E8E	Slave A fails for any of the following reasons: - Illegal Address Detect Reset - Illegal Opcode or Detect Reset - Watchdog Timer Reset - Loss of Clock Reset - Low Voltage Detect Reset - SPI Bus Malfunction (Read Value from Register Not Equal to Written Value)	If Watchdog resets controller OR Wrong value Read DTC Pass	1 All should pass	Diagnostic Enable Run/Crank, Accessory/Run or HVEM EB Comm Enable VITM System Voltage	True True >= 9V	Instantaneous - all reasons other than SPI bus 500us - SPI Bus 500 us in 200ms window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module A RAM	P1E8F	RAM Read Write function Failed	RAM Read not Equal to RAM Written	1	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm	True Transitions: TRUE to FALSE (During VTSM A Power down) U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624	At power up	Type A, 1 Trips
			DTC Pass	1		At power up		

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module A ROM	P1E90	ROM Checksum Method	ROM Checksum Value Calculated is Different than Stored	1	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True Transitions: TRUE to FALSE (During VTSM A Power down)	At power down	Type A, 1 Trips
			DTC Pass	1	No Active DTCs associated with Slave Loss of Comm	U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624	At power down	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module A KAM	P1E91	Using Checksum method	EEPROM Checksum Value Calculated is Different than Stored	1	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm	True Transitions: TRUE to FALSE (During VTSM A Power down) U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624	At power down	Type A, 1 Trips
			DTC Pass	1		At power down		

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module A Cell Balancing Circuit	P1E92	Cell Balance switch output	Cell Balance switch is below threshold	Slaves in VTSM: 4.0V < Cell Voltage < 5.0V Threshold = 66mV 3.5V < Cell Voltage < 4.0V Threshold = 41mV 3.0V < Cell Voltage < 3.5V Threshold = 22mV	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Internal Performance	True True U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624 Not Running	14 seconds in a 20 seconds window	Type A, 1 Trips
			DTC Pass	Slaves in VITM: 3.8V < Cell Voltage < 5.0V Threshold = 44mV 3.0V < Cell Voltage < 3.8V Threshold = 23mV Threshold is above values specified for Cell Voltage specified			20 seconds	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module A 5V Ref	P1E93	Sets when 5V Slave reference voltage is out of range	5V Reference Value (Circuit for Reference Diagnostic, Shunt Regulator)	5V Reference Value < 2.8V or 5V Reference Value > 3.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic	True True U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624 Not Running	1.4 seconds in a 2.0 seconds window	Type A, 1 Trips
			DTC Pass	2.8V <= 5V Reference Value <= 3.2V			2.0 seconds	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module B Performance	P1E94	Slave B fails for any of the following reasons: - Illegal Address Detect Reset - Illegal Opcode or Detect Reset - Watchdog Timer Reset - Loss of Clock Reset - Low Voltage Detect Reset - SPI Bus Malfunction (Read Value from Register Not Equal to Written Value)	If Watchdog resets controller OR Wrong value Read DTC Pass	1 All should pass	Diagnostic Enable Run/Crank, Accessory/Run or HVEM EB Comm Enable VITM System Voltage	True True >= 9V	Instantaneous - all reasons other than SPI bus 500us - SPI Bus 500 us in 200ms window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module B RAM	P1E95	RAM Read Write function Failed	RAM Read not Equal to RAM Written	1	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True Transitions: TRUE to FALSE (During VTSM B Power down)	At power up	Type A, 1 Trips
			DTC Pass	1	No Active DTCs associated with Slave Loss of Comm	U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624	At power up	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module B ROM	P1E96	ROM Checksum Method	ROM Checksum Value Calculated is Different than Stored	1	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True Transitions: TRUE to FALSE (During VTSM B Power down)	At power down	Type A, 1 Trips
			DTC Pass	1	No Active DTCs associated with Slave Loss of Comm	U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624	At power down	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module B KAM	P1E97	Using Checksum method	EEPROM Checksum Value Calculated is Different than Stored	1	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True Transitions: TRUE to FALSE (During VTSM B Power down)	At power down	Type A, 1 Trips
			DTC Pass	1	No Active DTCs associated with Slave Loss of Comm	U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624	At power down	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module B Cell Balancing Circuit	P1E98	Cell Balance switch output	Cell Balance switch is below threshold	Slaves in VTSM: 4.0V < Cell Voltage < 5.0V Threshold = 66mV 3.5V < Cell Voltage < 4.0V Threshold = 41mV 3.0V < Cell Voltage < 3.5V Threshold = 22mV Slaves in VITM: 3.8V < Cell Voltage < 5.0V Threshold = 44mV 3.0V < Cell Voltage < 3.8V Threshold = 23mV	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Internal Performance	True True U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624 Not Running P1E8E, P1E94, P1E9A, P1EA0, P1FBD, P1FBE, P1FBF, P1FC0, P1FC1, P1FC2, P3037, P3042	14 seconds in a 20 seconds window	Type A, 1 Trips
			DTC Pass	Threshold is above values specified for Cell Voltage specified			20 seconds	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module B 5V Ref	P1E99	Sets when 5V Slave reference voltage is out of range	5V Reference Value (Circuit for Reference Diagnostic, Shunt Regulator)	5V Reference Value < 2.8V or 5V Reference Value > 3.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic	True True U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624 Not Running	1.4 seconds in a 2.0 seconds window	Type A, 1 Trips
			DTC Pass	2.8V <= 5V Reference Value <= 3.2V			2.0 seconds	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module C Performance	P1E9A	Slave C fails for any of the following reasons: - Illegal Address Detect Reset - Illegal Opcode or Detect Reset - Watchdog Timer Reset - Loss of Clock Reset - Low Voltage Detect Reset - SPI Bus Malfunction (Read Value from Register Not Equal to Written Value)	If Watchdog resets controller OR Wrong value Read DTC Pass	1 All should pass	Diagnostic Enable Run/Crank, Accessory/Run or HVEM EB Comm Enable VITM System Voltage	True True >= 9V	Instantaneous - all reasons other than SPI bus 500us - SPI Bus 500 us in 200ms window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module C RAM	P1E9B	RAM Read Write function Failed	RAM Read not Equal to RAM Written	1	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True Transitions: TRUE to FALSE (During VTSM C Power down)	At power up	Type A, 1 Trips
			DTC Pass	1	No Active DTCs associated with Slave Loss of Comm	U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624	At power up	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module C ROM	P1E9C	ROM Checksum Method	ROM Checksum Value Calculated is Different than Stored	1	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm	True Transitions: TRUE to FALSE (During VTSM C Power down) U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624	At power down	Type A, 1 Trips
			DTC Pass	1		At power down		

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module C KAM	P1E9D	Using Checksum method	EEPROM Checksum Value Calculated is Different than Stored	1	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True Transitions: TRUE to FALSE (During VTSM C Power down)	At power down	Type A, 1 Trips
			DTC Pass	1	No Active DTCs associated with Slave Loss of Comm	U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624	At power down	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module C Cell Balancing Circuit	P1E9E	Cell Balance switch output	Cell Balance switch is below threshold	Slaves in VTSM: 4.0V < Cell Voltage < 5.0V Threshold = 66mV 3.5V < Cell Voltage < 4.0V Threshold = 41mV 3.0V < Cell Voltage < 3.5V Threshold = 22mV	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Internal Performance	True True U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624 Not Running	14 seconds in a 20 seconds window	Type A, 1 Trips
			DTC Pass	Slaves in VITM: 3.8V < Cell Voltage < 5.0V Threshold = 44mV 3.0V < Cell Voltage < 3.8V Threshold = 23mV Threshold is above values specified for Cell Voltage specified			20 seconds	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module C 5V Ref	P1E9F	Sets when 5V Slave reference voltage is out of range	5V Reference Value (Circuit for Reference Diagnostic, Shunt Regulator)	5V Reference Value < 2.8V or 5V Reference Value > 3.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic	True True U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624 Not Running	1.4 seconds in a 2.0 seconds window	Type A, 1 Trips
			DTC Pass	2.8V <= 5V Reference Value <= 3.2V			2.0 seconds	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module D Performance	P1EA0	Slave D fails for any of the following reasons: - Illegal Address Detect Reset - Illegal Opcode or Detect Reset - Watchdog Timer Reset - Loss of Clock Reset - Low Voltage Detect Reset - SPI Bus Malfunction (Read Value from Register Not Equal to Written Value)	If Watchdog resets controller OR Wrong value Read DTC Pass	1 All should pass	Diagnostic Enable Run/Crank, Accessory/Run or HVEM EB Comm Enable VITM System Voltage	True True >= 9V	Instantaneous - all reasons other than SPI bus 500us - SPI Bus 500 us in 200ms window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module D RAM	P1EA1	RAM Read Write function Failed	RAM Read not Equal to RAM Written	1	Diagnostic Enable	True	At power up	Type A, 1 Trips
			DTC Pass	1	Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm	Transitions: TRUE to FALSE (During VTSM D Power down) U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624	At power up	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module D ROM	P1EA2	ROM Checksum Method	ROM Checksum Value Calculated is Different than Stored	1	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm	True Transitions: TRUE to FALSE (During VTSM D Power down) U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624	At power down	Type A, 1 Trips
			DTC Pass	1		At power down		

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module D KAM	P1EA3	Using Checksum method	EEPROM Checksum Value Calculated is Different than Stored	1	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True Transitions: TRUE to FALSE (During VTSM D Power down)	At power down	Type A, 1 Trips
			DTC Pass	1	No Active DTCs associated with Slave Loss of Comm	U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624	At power down	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module D Cell Balancing Circuit	P1EA4	Cell Balance switch output	Cell Balance switch is below threshold	Slaves in VTSM: 4.0V < Cell Voltage < 5.0V Threshold = 66mV 3.5V < Cell Voltage < 4.0V Threshold = 41mV 3.0V < Cell Voltage < 3.5V Threshold = 22mV	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Internal Performance	True True U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624 Not Running	14 seconds in a 20 seconds window	Type A, 1 Trips
			DTC Pass	Slaves in VITM: 3.8V < Cell Voltage < 5.0V Threshold = 44mV 3.0V < Cell Voltage < 3.8V Threshold = 23mV Threshold is above values specified for Cell Voltage specified			20 seconds	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module D 5V Ref	P1EA5	Sets when 5V Slave reference voltage is out of range	5V Reference Value (Circuit for Reference Diagnostic, Shunt Regulator)	5V Reference Value < 2.8V or 5V Reference Value > 3.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic	True True U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624 Not Running	1.4 seconds in a 2.0 seconds window	Type A, 1 Trips
			DTC Pass	2.8V <= 5V Reference Value <= 3.2V			2.0 seconds	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module Software Incompatible	P1EB1	VITM Software version and Software version of ALL Slave modules are compatible	If any software version incompatibility is detected	1	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable VITM System Voltage No Active DTCs associated with Slave Loss of Comm	True True >= 9V Slave Loss of Comm Fault	At power up - 0.200 seconds	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module A Not Programmed	P1EB2	If Slave did not Program correctly	Wrong or No response from Slave indicating error in Programming	1	After Programming session Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable VITM System Voltage	 True True >= 9V	As soon as Programming session ends	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module B Not Programmed	P1EB3	If Slave did not Program correctly	Wrong or No response from Slave indicating error in Programming	1	After Programming session Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable VITM System Voltage	 True True >= 9V	As soon as Programming session ends	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module C Not Programmed	P1EB4	If Slave did not Program correctly	Wrong or No response from Slave indicating error in Programming	1	After Programming session Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable VITM System Voltage	 True True >= 9V	As soon as Programming session ends	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module D Not Programmed	P1EB5	If Slave did not Program correctly	Wrong or No response from Slave indicating error in Programming	1	After Programming session Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable VITM System Voltage	 True True >= 9V	As soon as Programming session ends	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Pack Current Sensor A Exceeded Learning Limit	P1EBA	If Pack Current Coarse Offset is out of range	Pack Current Coarse Offset	> 8A	Diagnostic Enable	True	At power up - 185 ms	Type A, 1 Trips
					Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True		
					High Voltage Contactor Status	Open		
					Charger Contactor Status	Open		
					VITM System Voltage	>= 9V		
					VITM Initalization Status Extended	Initializing		
					No Active DTC for Battery Energy Control Module Lost Communication with Hybrid Processor Control Module B on Bus H	U185B		
			DTC Pass	Pack Current Coarse Offset <= 8A			At power up - 185 ms	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Pack Current Sensor B Exceeded Learning Limit	P1EBB	If Pack Current Fine Offset is out of range	Pack Current Fine Offset	Pack Current Fine Offset > 2.5A	Diagnostic Enable	True	At power up - 185 ms	Type A, 1 Trips
					Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True		
					High Voltage Contactor Status	Open		
					Charger Contactor Status	Open		
					VITM System Voltage	>= 9V		
					VITM Initalization Status Extended	Initializing		
					No Active DTC for Battery Energy Control Module Lost Communication with Hybrid Processor Control Module B on Bus H	U185B		
			DTC Pass	Pack Current Fine Offset <= 2.5A			At power up - 185 ms	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Battery Energy Control Module High Voltage Energy Management Communicati on Bus Enable Circuit Low	P1EC1	If High Voltage Energy Management (HVEM) Wakeup input state is below Threshold and HVEM Received Serial Data State = Active	HVEM Hardwire Input and Serial Data signal	HVEM Input < 5V	Diagnostic Enable	True	7 seconds in a 10 second window	Type A, 1 Trips
					Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True		
					VITM System Voltage	>= 9V		
					No Active DTC for Battery Energy Control Module System Voltage Low	P1A0C		
					No Active DTC for Battery Energy Control Module Lost Communication with Hybrid Processor Control Module B on Bus A (HS)	U2602		
			DTC Pass	HVEM Input >= 5V			10 Seconds	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module A Processor Performance	P1F06	Compare Slave Reported Value with Expected Value in VITM	Reported Key Value by Slave is not correct	5	Diagnostic Enable Seed and Key Algorithm Calibration Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic	True True True Slave Loss of Comm Fault Not Running	1 second in a 1.4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module B Processor Performance	P1F07	Compare Slave Reported Value with Expected Value in VITM	Reported Key Value by Slave is not correct	5	Diagnostic Enable Seed and Key Algorithm Calibration Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic	True True True Slave Loss of Comm Fault Not Running	1 second in a 1.4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module C Processor Performance	P1F08	Compare Slave Reported Value with Expected Value in VITM	Reported Key Value by Slave is not correct	5	Diagnostic Enable Seed and Key Algorithm Calibration Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic	True True True Slave Loss of Comm Fault Not Running	1 second in a 1.4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module D Processor Performance	P1F09	Compare Slave Reported Value with Expected Value in VITM	Reported Key Value by Slave is not correct	5	Diagnostic Enable Seed and Key Algorithm Calibration Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic	True True True Slave Loss of Comm Fault Not Running	1 second in a 1.4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module E Not Programmed	P1FA6	If Slave did not Program correctly	Wrong or No response from Slave indicating error in Programming	1	After Programming session Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable VITM System Voltage	 True True >= 9V	As soon as Programming session ends	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module F Not Programmed	P1FA7	If Slave did not Program correctly	Wrong or No response from Slave indicating error in Programming	1	After Programming session Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable VITM System Voltage	 True True >= 9V	As soon as Programming session ends	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module G Not Programmed	P1FA8	If Slave did not Program correctly	Wrong or No response from Slave indicating error in Programming	1	After Programming session Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable VITM System Voltage	 True True >= 9V	As soon as Programming session ends	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module H Not Programmed	P1FA9	If Slave did not Program correctly	Wrong or No response from Slave indicating error in Programming	1	After Programming session Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable VITM System Voltage	 True True >= 9V	As soon as Programming session ends	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module I Not Programmed	P1FAA	If Slave did not Program correctly	Wrong or No response from Slave indicating error in Programming	1	After Programming session Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable VITM System Voltage	 True True >= 9V	As soon as Programming session ends	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module J Not Programmed	P1FAB	If Slave did not Program correctly	Wrong or No response from Slave indicating error in Programming	1	After Programming session Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable VITM System Voltage	 True True >= 9V	As soon as Programming session ends	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module I Cell Balancing Circuit	P1FCD	Cell Balance switch output	Cell Balance switch is below threshold	Slaves in VTSM: 4.0V < Cell Voltage < 5.0V Threshold = 66mV 3.5V < Cell Voltage < 4.0V Threshold = 41mV 3.0V < Cell Voltage < 3.5V Threshold = 22mV	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Internal Performance	True True U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624 Not Running	14 seconds in a 20 seconds window	Type A, 1 Trips
			DTC Pass	Slaves in VITM: 3.8V < Cell Voltage < 5.0V Threshold = 44mV 3.0V < Cell Voltage < 3.8V Threshold = 23mV Threshold is above values specified for Cell Voltage specified			20 seconds	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module J Cell Balancing Circuit	P1FCE	Cell Balance switch output	Cell Balance switch is below threshold	Slaves in VTSM: 4.0V < Cell Voltage < 5.0V Threshold = 66mV 3.5V < Cell Voltage < 4.0V Threshold = 41mV 3.0V < Cell Voltage < 3.5V Threshold = 22mV	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Internal Performance	True True U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624 Not Running	14 seconds in a 20 seconds window	Type A, 1 Trips
			DTC Pass	Slaves in VITM: 3.8V < Cell Voltage < 5.0V Threshold = 44mV 3.0V < Cell Voltage < 3.8V Threshold = 23mV Threshold is above values specified for Cell Voltage specified			20 seconds	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module E Processor Performance	P1FCF	Compare Slave Reported Value with Expected Value in VITM	Reported Key Value by Slave is not correct	5	Diagnostic Enable Seed and Key Algorithm Calibration Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic	True True True Slave Loss of Comm Fault Not Running	1 second in a 1.4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module F Processor Performance	P1FD0	Compare Slave Reported Value with Expected Value in VITM	Reported Key Value by Slave is not correct	5	Diagnostic Enable Seed and Key Algorithm Calibration Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic	True True True Slave Loss of Comm Fault Not Running	1 second in a 1.4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module G Processor Performance	P1FD1	Compare Slave Reported Value with Expected Value in VITM	Reported Key Value by Slave is not correct	5	Diagnostic Enable Seed and Key Algorithm Calibration Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic	True True True Slave Loss of Comm Fault Not Running	1 second in a 1.4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module H Processor Performance	P1FD2	Compare Slave Reported Value with Expected Value in VITM	Reported Key Value by Slave is not correct	5	Diagnostic Enable Seed and Key Algorithm Calibration Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic	True True True Slave Loss of Comm Fault Not Running	1 second in a 1.4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module I Processor Performance	P1FD3	Compare Slave Reported Value with Expected Value in VITM	Reported Key Value by Slave is not correct	5	Diagnostic Enable Seed and Key Algorithm Calibration Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic	True True True Slave Loss of Comm Fault Not Running	1 second in a 1.4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module J Processor Performance	P1FD4	Compare Slave Reported Value with Expected Value in VITM	Reported Key Value by Slave is not correct	5	Diagnostic Enable Seed and Key Algorithm Calibration Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic	True True True Slave Loss of Comm Fault Not Running	1 second in a 1.4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module A Voltage Sensor Circuit Low	P1FD5	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	< 1.5V (ADC Count < 123)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module B Voltage Sensor Circuit Low	P1FD6	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	< 1.5V (ADC Count < 123)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module C Voltage Sensor Circuit Low	P1FD7	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	< 1.5V (ADC Count < 123)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module D Voltage Sensor Circuit Low	P1FD8	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	< 1.5V (ADC Count < 123)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module E Voltage Sensor Circuit Low	P1FD9	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	< 1.5V (ADC Count < 123)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module F Voltage Sensor Circuit Low	P1FDA	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	< 1.5V (ADC Count < 123)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module G Voltage Sensor Circuit Low	P1FDB	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	< 1.5V (ADC Count < 123)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module H Voltage Sensor Circuit Low	P1FDC	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	< 1.5V (ADC Count < 123)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module I Voltage Sensor Circuit Low	P1FDD	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	< 1.5V (ADC Count < 123)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module J Voltage Sensor Circuit Low	P1FDE	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	< 1.5V (ADC Count < 123)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module A Voltage Sensor Circuit High	P1FDF	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	> 48.5V (ADC Count > 3972)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module B Voltage Sensor Circuit High	P1FE0	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	> 48.5V (ADC Count > 3972)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module C Voltage Sensor Circuit High	P1FE1	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	> 48.5V (ADC Count > 3972)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module D Voltage Sensor Circuit High	P1FE2	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	> 48.5V (ADC Count > 3972)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module E Voltage Sensor Circuit High	P1FE3	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	> 48.5V (ADC Count > 3972)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module F Voltage Sensor Circuit High	P1FE4	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	> 48.5V (ADC Count > 3972)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module G Voltage Sensor Circuit High	P1FE5	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	> 48.5V (ADC Count > 3972)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module H Voltage Sensor Circuit High	P1FE6	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	> 48.5V (ADC Count > 3972)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module I Voltage Sensor Circuit High	P1FE7	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	> 48.5V (ADC Count > 3972)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module J Voltage Sensor Circuit High	P1FE8	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	> 48.5V (ADC Count > 3972)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module A Voltage Sensor Circuit Range/ Performance	P1FE9	Compares Slave Module Voltage to sum of Cells measured by Slave	abs(Slave Module Voltage - Slave sum of Cell Voltages)	6-cell Slave Module: > 512mV (ADC Count > 422) 7-cell Slave Module: > 557mV (ADC Count > 445) 8-cell Slave Module: > 636mV (ADC Count > 521) 9-cell Slave Module: > 660mV (ADC Count > 540)	Diagnostic Enable No Active DTCs associated with Cell Voltage Ckt Low Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line No Active DTCs associated with Cell Voltage Ckt High No Active DTCs associated with Slave Internal Performance	True Cell Voltage Ckt Low True Slave Loss of Comm Fault Open Sense Line Fault Cell Voltage Ckt High Slave Internal Performance Fault	3 seconds in a 4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module B Voltage Sensor Circuit Range/ Performance	P1FEA	Compares Slave Module Voltage to sum of Cells measured by Slave	abs(Slave Module Voltage - Slave sum of Cell Voltages)	6-cell Slave Module: > 512mV (ADC Count > 422) 7-cell Slave Module: > 557mV (ADC Count > 445) 8-cell Slave Module: > 636mV (ADC Count > 521) 9-cell Slave Module: > 660mV (ADC Count > 540)	Diagnostic Enable No Active DTCs associated with Cell Voltage Ckt Low Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line No Active DTCs associated with Cell Voltage Ckt High No Active DTCs associated with Slave Internal Performance	True Cell Voltage Ckt Low True Slave Loss of Comm Fault Open Sense Line Fault Cell Voltage Ckt High Slave Internal Performance Fault	3 seconds in a 4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module C Voltage Sensor Circuit Range/ Performance	P1FEB	Compares Slave Module Voltage to sum of Cells measured by Slave	abs(Slave Module Voltage - Slave sum of Cell Voltages)	6-cell Slave Module: > 512mV (ADC Count > 422) 7-cell Slave Module: > 557mV (ADC Count > 445) 8-cell Slave Module: > 636mV (ADC Count > 521) 9-cell Slave Module: > 660mV (ADC Count > 540)	Diagnostic Enable No Active DTCs associated with Cell Voltage Ckt Low Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line No Active DTCs associated with Cell Voltage Ckt High No Active DTCs associated with Slave Internal Performance	True Cell Voltage Ckt Low True Slave Loss of Comm Fault Open Sense Line Fault Cell Voltage Ckt High Slave Internal Performance Fault	3 seconds in a 4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module D Voltage Sensor Circuit Range/ Performance	P1FEC	Compares Slave Module Voltage to sum of Cells measured by Slave	abs(Slave Module Voltage - Slave sum of Cell Voltages)	6-cell Slave Module: > 512mV (ADC Count > 422) 7-cell Slave Module: > 557mV (ADC Count > 445) 8-cell Slave Module: > 636mV (ADC Count > 521) 9-cell Slave Module: > 660mV (ADC Count > 540)	Diagnostic Enable No Active DTCs associated with Cell Voltage Ckt Low Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line No Active DTCs associated with Cell Voltage Ckt High No Active DTCs associated with Slave Internal Performance	True Cell Voltage Ckt Low True Slave Loss of Comm Fault Open Sense Line Fault Cell Voltage Ckt High Slave Internal Performance Fault	3 seconds in a 4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module E Voltage Sensor Circuit Range/ Performance	P1FED	Compares Slave Module Voltage to sum of Cells measured by Slave	abs(Slave Module Voltage - Slave sum of Cell Voltages)	6-cell Slave Module: > 512mV (ADC Count > 422) 7-cell Slave Module: > 557mV (ADC Count > 445) 8-cell Slave Module: > 636mV (ADC Count > 521) 9-cell Slave Module: > 660mV (ADC Count > 540)	Diagnostic Enable No Active DTCs associated with Cell Voltage Ckt Low Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line No Active DTCs associated with Cell Voltage Ckt High No Active DTCs associated with Slave Internal Performance	True Cell Voltage Ckt Low True Slave Loss of Comm Fault Open Sense Line Fault Cell Voltage Ckt High Slave Internal Performance Fault	3 seconds in a 4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module F Voltage Sensor Circuit Range/ Performance	P1FEE	Compares Slave Module Voltage to sum of Cells measured by Slave	abs(Slave Module Voltage - Slave sum of Cell Voltages)	6-cell Slave Module: > 512mV (ADC Count > 422) 7-cell Slave Module: > 557mV (ADC Count > 445) 8-cell Slave Module: > 636mV (ADC Count > 521) 9-cell Slave Module: > 660mV (ADC Count > 540)	Diagnostic Enable No Active DTCs associated with Cell Voltage Ckt Low Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line No Active DTCs associated with Cell Voltage Ckt High No Active DTCs associated with Slave Internal Performance	True Cell Voltage Ckt Low True Slave Loss of Comm Fault Open Sense Line Fault Cell Voltage Ckt High Slave Internal Performance Fault	3 seconds in a 4 second window	Type A, 1 Trips

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module G Voltage Sensor Circuit Range/ Performance	P1FEF	Compares Slave Module Voltage to sum of Cells measured by Slave	abs(Slave Module Voltage - Slave sum of Cell Voltages)	6-cell Slave Module: > 512mV (ADC Count > 422) 7-cell Slave Module: > 557mV (ADC Count > 445) 8-cell Slave Module: > 636mV (ADC Count > 521) 9-cell Slave Module: > 660mV (ADC Count > 540)	Diagnostic Enable No Active DTCs associated with Cell Voltage Ckt Low Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line No Active DTCs associated with Cell Voltage Ckt High No Active DTCs associated with Slave Internal Performance	True Cell Voltage Ckt Low True Slave Loss of Comm Fault Open Sense Line Fault Cell Voltage Ckt High Slave Internal Performance Fault	3 seconds in a 4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module H Voltage Sensor Circuit Range/ Performance	P1FF0	Compares Slave Module Voltage to sum of Cells measured by Slave	abs(Slave Module Voltage - Slave sum of Cell Voltages)	6-cell Slave Module: > 512mV (ADC Count > 422) 7-cell Slave Module: > 557mV (ADC Count > 445) 8-cell Slave Module: > 636mV (ADC Count > 521) 9-cell Slave Module: > 660mV (ADC Count > 540)	Diagnostic Enable No Active DTCs associated with Cell Voltage Ckt Low Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line No Active DTCs associated with Cell Voltage Ckt High No Active DTCs associated with Slave Internal Performance	True Cell Voltage Ckt Low True Slave Loss of Comm Fault Open Sense Line Fault Cell Voltage Ckt High Slave Internal Performance Fault	3 seconds in a 4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module I Voltage Sensor Circuit Range/ Performance	P1FF1	Compares Slave Module Voltage to sum of Cells measured by Slave	abs(Slave Module Voltage - Slave sum of Cell Voltages)	6-cell Slave Module: > 512mV (ADC Count > 422) 7-cell Slave Module: > 557mV (ADC Count > 445) 8-cell Slave Module: > 636mV (ADC Count > 521) 9-cell Slave Module: > 660mV (ADC Count > 540)	Diagnostic Enable No Active DTCs associated with Cell Voltage Ckt Low Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line No Active DTCs associated with Cell Voltage Ckt High No Active DTCs associated with Slave Internal Performance	True Cell Voltage Ckt Low True Slave Loss of Comm Fault Open Sense Line Fault Cell Voltage Ckt High Slave Internal Performance Fault	3 seconds in a 4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module J Voltage Sensor Circuit Range/ Performance	P1FF2	Compares Slave Module Voltage to sum of Cells measured by Slave	abs(Slave Module Voltage - Slave sum of Cell Voltages)	6-cell Slave Module: > 512mV (ADC Count > 422) 7-cell Slave Module: > 557mV (ADC Count > 445) 8-cell Slave Module: > 636mV (ADC Count > 521) 9-cell Slave Module: > 660mV (ADC Count > 540)	Diagnostic Enable No Active DTCs associated with Cell Voltage Ckt Low Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line No Active DTCs associated with Cell Voltage Ckt High No Active DTCs associated with Slave Internal Performance	True Cell Voltage Ckt Low True Slave Loss of Comm Fault Open Sense Line Fault Cell Voltage Ckt High Slave Internal Performance Fault	3 seconds in a 4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module F ROM	P1FF3	ROM Checksum Method	ROM Checksum Value Calculated is Different than Stored	1	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm	True Transitions: TRUE to FALSE (During VTSM F Power down) U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624	At power down	Type A, 1 Trips
			DTC Pass	1		At power down		

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module K Not Programmed	P3030	If Slave did not Program correctly	Wrong or No response from Slave indicating error in Programming	1	After Programming session Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable VITM System Voltage	 True True >= 9V	As soon as Programming session ends	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module K ROM	P3031	ROM Checksum Method	ROM Checksum Value Calculated is Different than Stored	1	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm	True Transitions: TRUE to FALSE (During VTSM K Power down) U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624	At power down	Type A, 1 Trips
			DTC Pass	1		At power down		

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module K RAM	P3032	RAM Read Write function Failed	RAM Read not Equal to RAM Written	1	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True Transitions: TRUE to FALSE (During VTSM K Power down)	At power up	Type A, 1 Trips
			DTC Pass	1	No Active DTCs associated with Slave Loss of Comm	U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624	At power up	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module K KAM	P3033	Using Checksum method	EEPROM Checksum Value Calculated is Different than Stored	1	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True Transitions: TRUE to FALSE (During VTSM K Power down)	At power down	Type A, 1 Trips
			DTC Pass	1	No Active DTCs associated with Slave Loss of Comm	U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624	At power down	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module K Performance	P3034	Slave K fails for any of the following reasons: - Illegal Address Detect Reset - Illegal Opcode or Detect Reset - Watchdog Timer Reset - Loss of Clock Reset - Low Voltage Detect Reset - SPI Bus Malfunction (Read Value from Register Not Equal to Written Value)	If Watchdog resets controller OR Wrong value Read DTC Pass	1 All should pass	Diagnostic Enable Run/Crank, Accessory/Run or HVEM EB Comm Enable VITM System Voltage	True True >= 9V	Instantaneous - all reasons other than SPI bus 500us - SPI Bus 500 us in 200ms window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module K 5V Ref	P3035	Sets when 5V Slave reference voltage is out of range	5V Reference Value (Circuit for Reference Diagnostic, Shunt Regulator)	5V Reference Value < 2.8V or 5V Reference Value > 3.2V	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic	True True U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624 Not Running	1.4 seconds in a 2.0 seconds window	Type A, 1 Trips
			DTC Pass	2.8V <= 5V Reference Value <= 3.2V			2.0 seconds	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module K Cell Balancing Circuit	P3036	Cell Balance switch output	Cell Balance switch is below threshold	Slaves in VTSM: 4.0V < Cell Voltage < 5.0V Threshold = 66mV 3.5V < Cell Voltage < 4.0V Threshold = 41mV 3.0V < Cell Voltage < 3.5V Threshold = 22mV	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic No Active DTCs associated with Slave Internal Performance	True True U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624 Not Running P1E8E, P1E94, P1E9A, P1EA0, P1FBD, P1FBE, P1FBF, P1FC0, P1FC1, P1FC2, P3037, P3042	14 seconds in a 20 seconds window	Type A, 1 Trips
			DTC Pass	Slaves in VITM: 3.8V < Cell Voltage < 5.0V Threshold = 44mV 3.0V < Cell Voltage < 3.8V Threshold = 23mV Threshold is above values specified for Cell Voltage specified		20 seconds		

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module K Processor Performance	P3037	Compare Slave Reported Value with Expected Value in VITM	Reported Key Value by Slave is not correct	5	Diagnostic Enable Seed and Key Algorithm Calibration Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm 2nd Protection Self Test Diagnostic	True True True Slave Loss of Comm Fault Not Running	1 second in a 1.4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module K Voltage Sensor Circuit Low	P3038	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	< 1.5V (ADC Count < 123)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module K Voltage Sensor Circuit High	P3039	Sets when Module Voltage Sensor falls below a Threshold	Module Voltage	> 48.5V (ADC Count > 3972)	Diagnostic Enable Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Slave Internal Performance	True True Slave Loss of Comm Fault Slave Internal Performance Fault	1.4 second in a 2 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module K Voltage Sensor Circuit Range/ Performance	P303A	Compares Slave Module Voltage to sum of Cells measured by Slave	abs(Slave Module Voltage - Slave sum of Cell Voltages)	6-cell Slave Module: > 512mV (ADC Count > 422) 7-cell Slave Module: > 557mV (ADC Count > 445) 8-cell Slave Module: > 636mV (ADC Count > 521) 9-cell Slave Module: > 660mV (ADC Count > 540)	Diagnostic Enable No Active DTCs associated with Cell Voltage Ckt Low Run/Crank, Accessory or HVEM EB Comm Enable No Active DTCs associated with Slave Loss of Comm No Active DTCs associated with Open Sense Line No Active DTCs associated with Cell Voltage Ckt High No Active DTCs associated with Slave Internal Performance	True Cell Voltage Ckt Low True Slave Loss of Comm Fault Open Sense Line Fault Cell Voltage Ckt High Slave Internal Performance Fault	3 seconds in a 4 second window	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid/EV Battery Interface Control Module L Not Programmed	P303B	If Slave did not Program correctly	Wrong or No response from Slave indicating error in Programming	1	After Programming session Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable VITM System Voltage	 True True >= 9V	As soon as Programming session ends	Type A, 1 Trips

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module L ROM	P303C	ROM Checksum Method	ROM Checksum Value Calculated is Different than Stored	1	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True Transitions: TRUE to FALSE (During VTSM L Power down)	At power down	Type A, 1 Trips
			DTC Pass	1	No Active DTCs associated with Slave Loss of Comm	U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624	At power down	

17 OBDG01 Voltage Current and Temperature Module (VITM) Summary Tables

Component/ System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum.
Hybrid Battery Interface Control Module L RAM	P303D	RAM Read Write function Failed	RAM Read not Equal to RAM Written	1	Diagnostic Enable Run/Crank, Accessory/ Run or HVEM EB Comm Enable	True Transitions: TRUE to FALSE (During VTSM L Power down)	At power up	Type A, 1 Trips
			DTC Pass	1	No Active DTCs associated with Slave Loss of Comm	U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624	At power up

Bundle Name: TempRationalityFA
P0AC6, P0ACB, P0AE9, P0BC3, P0C34, P0A9E, P0AC8, P0ACD, P0AEB, P0BC5, P0C36, P0A9D, P0AC7, P0ACC, P0AEA, P0BC4, P0C35, P1EB1, P1EB2, P1EB3, P1EB4, P1EB5, P1FA6, P1FA7, P1FA8, P1FA9, P1FAA, P1FAB, P3030, P303B, U2401, U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624
Bundle Name: VICMVoltageFA
P0B3D, P0B42, P0B47, P0B4C, P0B51, P0B56, P0B5B, P0B60, P0B65, P0B6A, P0B6F, P0B74, P0B79, P0B7E, P0B83, P0B88, P0B8D, P0B92, P0B97, P0B9C, P0BA1, P0BA6, P0BAB, P0BB0, P0BB5, P0BBA, P1B17, P1B1A, P1B1D, P1B20, P1B23, P1B26, P1B46, P1B49, P1B4C, P1B4F, P1B52, P1B55, P1B58, P1B5B, P1B5E, P1B61, P1B64, P1B67, P1B6A, P1B6D, P1B70, P1B73, P1B76, P1B79, P1B7C, P1B7F, P1B82, P1B85, P1B88, P1B8B, P1B8E, P1B91, P1B94, P1B97, P1B9A, P1B9D, P1BA0, P1BA3, P1BA6, P1BA9, P1BAC, P1BAF, P1BB2, P1BB5, P1BB8, P1BBB, P1BBE, P1BC1, P1BC4, P1BC7, P1BCA, P1BCD, P1BD0, P1BD3, P1BD6, P1BD9, P1BDC, P1BDF, P1BE2, P1BE5, P1BE8, P1BEB, P1BEE, P1BF1, P1BF4, P1BF7, P1BFA, P1BFD, P1E02, P1E05, P0B3E, P0B43, P0B48, P0B4D, P0B52, P0B57, P0B5C, P0B61, P0B66, P0B6B, P0B70, P0B75, P0B7A, P0B7F, P0B84, P0B89, P0B8E, P0B93, P0B98, P0B9D, P0BA2, P0BA7, P0BAC, P0BB1, P0BB6, P0BBB, P1B18, P1B1B, P1B1E, P1B21, P1B24, P1B27, P1B47, P1B4A, P1B4D, P1B50, P1B53, P1B56, P1B59, P1B5C, P1B5F, P1B62, P1B65, P1B68, P1B6B, P1B6E, P1B71, P1B74, P1B77, P1B7A, P1B7D, P1B80, P1B83, P1B86, P1B89, P1B8C, P1B8F, P1B92, P1B95, P1B98, P1B9B, P1B9E, P1BA1, P1BA4, P1BA7, P1BAA, P1BAD, P1BB0, P1BB3, P1BB6, P1BB9, P1BBC, P1BBF, P1BC2, P1BC5, P1BC8, P1BCB, P1BCE, P1BD1, P1BD4, P1BD7, P1BDA, P1BDD, P1BE0, P1BE3, P1BE6, P1BE9, P1BEC, P1BEF, P1BF2, P1BF5, P1BF8, P1BFB, P1BFE, P1E03, P1E06, P0B3B, P0B40, P0B45, P0B4A, P0B4F, P0B54, P0B59, P0B5E, P0B63, P0B68, P0B6D, P0B77, P0B7C, P0B81, P0B86, P0B8B, P0B95, P0B9A, P0B9F, P0BA4, P0BA9, P0BAE, P0BB3, P0BB8, P1B28, P1B29, P1B2A, P1B2B, P1B2C, P1B2D, P1E4C, P1E4D, P1E4E, P1E4F, P1E50, P1E51, P1E52, P1E53, P1E54, P1E56, P1E57, P1E58, P1E59, P1E5A, P1E5B, P1E5C, P1E5D, P1E5E, P1E5F, P1E60, P1E61, P1E62, P1E63, P1E64, P1E65, P1E66, P1E67, P1E68, P1E69, P1E6A, P1E6B, P1E6C, P1E6E, P1E6F, P1E70, P1E71, P1E72, P1E73, P1E74, P1E75, P1E76, P1E77, P1E78, P1E79, P1E7A, P1E7B, P1E7C, P1E7D, P1E7E, P1E7F, P1E80, P1E81, P1E82, P1E83, P1E84, P1E86, P1E87, P1E88, P1E89, P1E8A, P0B3C, P0B41, P0B46, P0B4B, P0B50, P0B55, P0B5A, P0B5F, P0B64, P0B69, P0B6E, P0B73, P0B78, P0B7D, P0B82, P0B87, P0B8C, P0B91, P0B96, P0B9B, P0BA0, P0BA5, P0BAF, P0BB4, P0BB9, P1B16, P1B19, P1B1C, P1B1F, P1B22, P1B25, P1B45, P1B48, P1B4B, P1B4E, P1B51, P1B54, P1B57, P1B5A, P1B5D, P1B60, P1B63, P1B66, P1B69, P1B6C, P1B6F, P1B72, P1B75, P1B78, P1B7Z, P1B7E, P1B81, P1B84, P1B87, P1B8A, P1B8D, P1B90, P1B93, P1B96, P1B99, P1B9C, P1B9F, P1BA2, P1BA5, P1BA8, P1BAB, P1BAE, P1BB1, P1BB4, P1BB7, P1BBA, P1BBD, P1BC0, P1BC3, P1BC6, P1BC9, P1BCC, P1BCF, P1BD2, P1BD5, P1BD8, P1BDB, P1BDE, P1BE1, P1BE4, P1BE7, P1BEA, P1BED, P1BF0, P1BF3, P1BF6, P1BF9, P1BFC, P1E01, P1E04, U2603, U2604, U2605, U2606, U2617, U2618, U2619, U2620, U2621, U2622, U2623, U2624, P1EB1, P1EB2, P1EB3, P1EB4, P1EB5, P1FA6, P1FA7, P1FA8, P1FA9, P1FAA,

17 OBDG01 VITM Fault Bundle Definitions

P1FAB, P3030, P303B, P0ABC, P0ABD

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
ABS Front Hydraulic Circuit Leak Detected	C05B0	This monitoring checks if the front brake circuit has a leak by comparing the wheels dynamics with the vehicle deceleration.1. A fault is set if wheels dynamics do not match the vehicle deceleration.	The wheels dynamics are not matching the vehicle deceleration	= True	Ignition key AND Antilock brake system OR EBD Braking	= On = Active = Active	1 [Sec]	Type A, 1 Trip
		This monitoring checks for a brake circuit failure at the front axle. A fault is set if the master cylinder pressure is higher than the rear axle pressure.	Pressure of Master cylinder	> Pressure of rear axle	Ignition key AND Pressure at front axle Maintain the brake pedal at a constant force	= On > 5000 Kpa = 3 Sec	0.2 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition On and apply brake pedal with a pressure at front axle higher than 5000 kpa. Maintain the brake pedal with a constant force for 3 seconds and release.					
ABS Pump Motor Calibration Not Learned	C05AE	This monitoring strategy checks if there is a 0V calibration at Sigma Delta Modulator (SDM).The motor measuring units through a SDM require a 0V calibration. The measured SDM 0V calibration values are compared. A fault is set if the measured voltages are outside of a calibrated range.	Raw generator voltage Ugen OR Raw generator voltage Ugen AND Raw voltage drops at hydraulic pump motor relay URdsON OR Raw voltage drops at hydraulic pump motor relay URdsON	< 14 V > 23.8 V < 13 V > 18 V	Ignition key AND System voltage AND Hydraulic pump motor	= On > 6.9 V = Off	3 [Sec]	Type A, 1 Trip
		This monitoring verifies the supply voltage of the return flow pump. A supply undervoltage fault is set if the voltage of the pump motor shunt resistor is below a calibrated threshold or if the voltage of the Motor relay drain voltage is above a calibrated range, which is depending on the system voltage.	Voltage of motor shunt resistor OR Motor relay drain voltage OR Motor relay drain voltage	< 7.5 V > 3 V < 1.5 V	Ignition key AND System voltage AND Hydraulic pump motor	= On > 6.9 V = Off	2 [Sec]	Type A, 1 Trip
		DTC Pass	Accelerate vehicle to at least 18.6 mph and hold the speed for at least 20s					
ABS Pump Motor Control Circuit High	C052D	This monitoring strategy checks if there is a motor interruption or a motor relay short-circuit failure outside a motor actuation. The state of the pump motor is monitored. A fault is set if the motor voltage exceeds a calibrated threshold.	Hydraulic pump motor supply voltage	> 12 V	Hydraulic pump motor	= Off	1 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 30sec without braking.					
ABS Pump Motor Performance	C052B	This monitoring strategy checks if the return pump is weak due to a heavy load. A fault is set if the calculated generator voltage is over a calibrated threshold and the measured generator voltage is below the same threshold.	Calculated generator voltage AND Measured generator voltage	> 0.6 V < 0.6 V	System voltage AND Hydraulic pump motor AND Electronic Brake Control Unit state	> 6.9 V = On = Started with hardware reset	0.48 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks the functionality of the hydraulic pump motor path. A fault is set if the voltage drop over the motor relay stays below a calibrated threshold when the motor relay (MR) is switched on.	Voltage drops at hydraulic pump motor relay AND Motor relay switched on	< 2 V = True	System voltage AND Vehicle speed AND Hydraulic pump motor	> 6.9 V > 9.32 mph = Off	5 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the hydraulic pump motor can be actuated and if the generated motor voltage is visible to the microcontroller. The pump motor is actuated, and both the analog and digital feedback voltage signals are monitored. A fault is set if the analog or digital pump motor voltage is below a calibrated threshold.	Analog pump motor voltage OR Digital pump motor voltage	< 1.7 V < 1.7 V	Ignition key	= On	5 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the motor voltage is incorrect. The Motor Voltage Comparison Test triggers a predetermined number of measurements in normal mode to give the motor voltage comparison monitor the chance to detect failures. To do this, it switches the motor voltage to UBMR (Battery Motor Relay) voltage and compares the analog UBMR voltage read in by the Analog Digital Converter (ADC) with the digital UBMR voltage calculated by the Application Specific Integrated Circuit (ASIC) while the hydraulic pump is not active. A fault is set if the deviation between the UBMR voltage read by the ADC (analog) and the UBMR voltage calculated by the ASIC (digital) exceeds a calibrated threshold.	Motor relay supply line voltage read by ADC (analog) / Motor relay supply line voltage calculated by ASIC (digital)	> 0.25	Ignition key AND Hydraulic pump motor	= On = On	2 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 30sec without braking. Accelerate vehicle to at least 37.3 mph and hold the speed for at least 7s					
ABS Pump Motor Supply Circuit	C052F	This monitoring strategy checks if an interruption of the motor relay voltage supply line has occurred. This can be caused by a defective fuse, a bad or broken car wire harness, or even by very deep undervoltage at the motor relay voltage supply line. A fault is set if the supply line voltage (UBMR) drops below a calibrated threshold.	Motor relay supply voltage	< 1.955 V	Ignition key	= On	0.1 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
ABS Pump Motor Supply Voltage "A" Circuit Low	C055B	This monitoring strategy checks if there is a possible inline resistor or undervoltage situation in the motor relay supplier. This is a check to ensure that the Application Specific Integrated Circuit (ASIC) register bit is set whenever there is an MRDSupplyFailure and is not reset throughout the ignition cycle, even if the voltage is recovered. A fault is set if during return flow pump actuation, the motor relay battery voltage drops below a calibrated threshold.	Motor relay voltage / internal supply voltage	< 0.4	Hydraulic pump motor AND Ignition key AND Vehicle speed	= On = On > 23.6 mph	0.01 [Sec]	Special Type C
		This monitoring strategy checks if there are failures on the motor supply line (for example: interruptions of UBMR). An Application Specific Integrated Circuit (ASIC) compares the voltage at UBMR with an internal dependent threshold provided by the hardware. A fault is set if the motor relay supply voltage is below a calibrated threshold.	Motor relay voltage / internal supply voltage	< 0.4	Ignition key	= On	0.2 [Sec]	Special Type C
		DTC Pass	Drive off, accelerate up to 37.2 mph and maintain this speed for at least 5 Sec					
ABS Rear Hydraulic Circuit Leak Detected	C05B1	This monitoring strategy checks if there is a leakage on the rear axle brake circuit. The monitor detects the variation of the rear axle pressure value during hold phases. A fault is set if the rear axle pressure decreases by more than a calibrated amount.	Calculated leakage on rear axle from the pressure variation	> 0.3 ml/Sec	System voltage Rear axle target pressure Pump motor running Vehicle speed For a cumulative duration of braking situations	> 9.6 V > 4500 kPa = False = 0 mph > 300 Sec	1[Sec]	Type A, 1 Trip
		This monitoring checks for a brake circuit failure at the rear axle. A fault is set if the master cylinder pressure is lower than the rear axle pressure.	Pressure of Master cylinder	< Pressure of rear axle	Ignition key AND Pressure at front axle Maintain the brake pedal at a constant force	= On > 5000 KPa = 3 Sec	0.2 [Sec]	Type A, 1 Trip
		DTC Pass	Turn on ignition. Constant brake pedal application during standstill for at least 3 sec. Check that the brake lights are illuminated or pressure at master cylinder > 500kpa. Release the brake pedal. Wait 5s. Constant brake pedal application during standstill for at least 3 sec. Check that the brake lights are illuminated or pressure at master cylinder > 500kpa. Release the brake pedal.					

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
Brake Assist Information 1 Message Counter Incorrect	C1284	This monitoring strategy checks whether the message is still alive or not. The network driver has to send and receive all network messages. At the same time it has to check that the messages are correct (length, checksum, alive-counter, reception timeout). With each newly sent message a counter is incremented within the sending ECU. the counter value is enclosed within the message. The receiving control unit checks whether counters have been incremented. A fault is set if the counter value is not incremented.	Message 0x214 on Bus E counter halted	= True	System voltage AND System voltage AND Bus Off Fault Active ECU is sending/receiving on CAN AND ECU Power Mode transition diagnostic enable delay timer	> 7.5 V < 16 V = False = True ≥ 5 Sec	0.1 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the message checksum is correct. The network driver sends and receives all network messages. It also checks if the messages are correct (length, checksum, alive-counter, reception timeout). With each newly sent message a checksum is calculated within the sending ECU. The value of the checksum is enclosed within the message. The receiving control unit calculates the checksum again and compares it with the sent one. A fault is set if the received checksum is different from the calculated checksum.	Checksum of 0x214 on Bus E not correct	= True	System voltage AND System voltage AND Bus Off Fault Active ECU is sending/receiving on CAN AND ECU Power Mode transition diagnostic enable delay timer	> 7.5 V < 16 V = False = True ≥ 5 Sec	0.1 [Sec]	Type A, 1 Trip
Brake Assist Information 2 Message Counter Incorrect	C1285	This monitoring strategy checks whether the message is still alive or not. The network driver has to send and receive all network messages. At the same time it has to check that the messages are correct (length, checksum, alive-counter, reception timeout). With each newly sent message a counter is incremented within the sending ECU. the counter value is enclosed within the message. The receiving control unit checks whether counters have been incremented. A fault is set if the counter value is not incremented.	Message 0x219 on Bus E counter halted	= True	System voltage AND System voltage AND Bus Off Fault Active ECU is sending/receiving on CAN AND ECU Power Mode transition diagnostic enable delay timer	> 7.5 V < 16 V = False = True ≥ 5 Sec	0.1 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the message checksum is correct. The network driver sends and receives all network messages. It also checks if the messages are correct (length, checksum, alive-counter, reception timeout). With each newly sent message a checksum is calculated within the sending ECU. The value of the checksum is enclosed within the message. The receiving control unit calculates the checksum again and compares it with the sent one. A fault is set if the received checksum is different from the calculated checksum.	Checksum of 0x219 on Bus E not correct	= True	System voltage AND System voltage AND Bus Off Fault Active ECU is sending/receiving on CAN AND ECU Power Mode transition diagnostic enable delay timer	> 7.5 V < 16 V = False = True ≥ 5 Sec	0.1 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
Brake Blending System Performance	C05AD	This monitoring tests if the actual pressure in the boost piston is much higher than the target pressure. The cause of this fault could be an erroneously high pressure sensor value. A fault is set if the actual pressure is much higher than the target pressure in the by-wire circuit	Actual pressure	> 4000 KPa	Ignition key	= On	0,5 - 1 [Sec]	Type A, 1 Trip
		This monitoring tests if the actual pressure in the boost piston is much higher than the target pressure. The cause of this fault could be an erroneously high pressure sensor value. A fault is set if the actual pressure is much higher than the target pressure in the master cylinder.	Actual pressure	> 4000 KPa	Ignition key	= On	0,5 - 1 [Sec]	Type A, 1 Trip
		This monitoring checks if the actual pressure in the boost piston is much lower than the target pressure. The cause of this fault could be an erroneously low pressure sensor value, no pressure or too low pressure in the accumulator, a defective pump, air in the hydraulic circuit, or a leakage in the hydraulic circuit. A fault is set if the actual pressure is much lower than the target pressure in the by-wire circuit	Actual pressure	< 1500 KPa	Ignition key	= On	0,5 - 1 [Sec]	Type A, 1 Trip
		This monitoring checks if the actual pressure in the boost piston is much lower than the target pressure. The cause of this fault could be an erroneously low pressure sensor value, no pressure or too low pressure in the accumulator, a defective pump, air in the hydraulic circuit, or a leakage in the hydraulic circuit. A fault is set if the actual pressure is much lower than the target pressure in the master cylinder.	Actual pressure	< 1500 KPa	Ignition key	= On	0,5 - 1 [Sec]	Type A, 1 Trip
		DTC Pass	Turn on ignition, 1. Wait 5seconds, 2. Drive up to 24.8 mph, 3. Realize a comfortable braking (about 3000 kpa at the rear axle), 4. Hold for 2 seconds and release smooth the brake pedal, 5. Wait 2seconds. Then repeat step 2 to 5 once again.					
Brake Master Cylinder Pressure Sensor 1 Circuit High Voltage	C0572	This monitoring checks if there is a short circuit between the supply voltage line and the pressure sensor signal line by comparing the signal line with the supply voltage line. Normally, the signal line maximum voltage should be lower than the supply voltage. A fault is set, if there is no difference in voltage between the signal line and the supply line.	Signal line voltage / Supply line voltage	> 0.95	Ignition key	= On	0.1 [Sec]	Type A, 1 Trip
			AND Signal line voltage / Supply line voltage	< 1.05				
		DTC Pass	Turn ignition on and wait for at least 5sec.					

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
Brake Master Cylinder Pressure Sensor 1 Circuit Low Voltage	C0571	This monitoring checks if there is a short circuit between the ground and the pressure sensor signal line by comparing the signal line voltage with the ground. Normally, the signal line has a minimum voltage that is higher than the ground. A fault is set if there is no difference in voltage between the signal line and the ground.	Signal line voltage / Ground voltage AND Signal line voltage / Ground voltage	> 0.95 < 1.05	Ignition key	= On	0.1 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					
Brake Master Cylinder Pressure Sensor 1 Circuit Performance	C0574	This monitoring strategy checks if the offset compensation of the pressure sensor is out of range. The zero-point of the pressure sensor signal is adjusted to compensate for any signal drifts. The offset compensation is only performed when the brake pedal is not applied (corresponding to the pressure sensor zero point). A fault is set if the offset is outside a calibrated range.	Measured pressure OR Measured pressure	> 1500 KPa < -1500 KPa	System voltage AND Brake pedal is pushed AND Acceleration pedal is pushed AND Hydraulic pump motor And Vehicle speed	> 6.9 V = False = True = Off > 4.48 mph	Immediately	Type A, 1 Trip
		DTC Pass	Drive off, accelerate up to 37.2 mph and maintain this speed for at least 5s					
Brake Pressure Sensor "A" Missing Calibration	C0560	This monitoring strategy checks if the pressure sensor at the master cylinder is functioning as expected. A fault is set if the master cylinder pressure sensor test pulse voltage exceeds a calibrated threshold or if it falls below another calibrated threshold.	Master cylinder pressure sensor test pulse voltage OR Master cylinder pressure sensor test pulse voltage	> 110 % < 90 %	Vehicle acceleration AND Actual pressure of Master Cylinder AND Traction Control System AND Vehicle speed AND Anti-Lock Braking System intervention AND Vehicle Dynamics Control AND Hydraulic pump motor	= False < 150 KPa = Off < 9.32 mph = Off = Off = Off	Immediately	Type A, 1 Trip
		DTC Pass	Drive with more than 6.2 mph for more than 60 Sec. without pressing brake pedal and no

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
Brake Pressure Sensor "B" Missing Calibration	C059B	This monitoring strategy checks if the rear left pressure sensor is functioning as expected. A fault is set if the master cylinder pressure sensor test pulse voltage exceeds a calibrated threshold. A fault is also set if the test pulse voltage falls below a calibrated threshold.	Rear left pressure sensor testpulse voltage OR Rear left pressure sensor testpulse voltage	> 110 % < 90 %	System Software Offset compensation of pressure sensor completed AND Actual pressure of Master Cylinder AND Traction Control System AND Anti-Lock Braking System intervention AND Vehicle Dynamics Control AND Hydraulic pump motor AND Brake light switch AND Last test pulse AND Vehicle speed OR Throttle control is pushed	= At least once < 150 kPa = Off = Off = Off = Off = Off > 30 Sec < 9.32 mph = True	Immediately	Type A, 1 Trip
		DTC Pass	Drive with more than 6.2 mph for more than 60 Sec. without pressing brake pedal and no stability control active.					
Separator								
Brake Pressure Sensor / Brake Pedal Position Sensor Correlation	P05FF	This monitoring checks for hydraulic circuit failures. It will check if there is a leakage or a large amount of air in the hydraulic circuit. A fault is set if the pressure sensor value stay at zero while the pedal Travel sensor value is over a threshold.	PTS signal AND Pressure signal	> 24 mm = 0 KPa	Full system mode	= On	0.2 [Sec]	Type A, 1 Trip
		This monitoring checks a pressure sensor plausibility failure. A fault is set if the pressure sensor value is too high compared to the pedal travel sensor value.	PTS signal AND Pressure signal	= 0 mm > 25 KPa	Full system mode	= On	0.2 [Sec]	Type A, 1 Trip
		DTC Pass	The brake pedal has to be pressed for more than 1 second (the pressure should reach minimum 3000 kpa).					
Separator								
Control Module Communication Chassis Expansion CAN Bus Off - Generic	U0077	The CAN (Control Area Network) bus E state is monitored periodically. A fault is set if the bus is in "Bus Off" state.	CAN bus E state	= Bus off	System voltage AND System voltage ECU is sending/receiving on CAN AND ECU Power Mode transition diagnostic enable delay timer	> 7.5 V < 16 V = True ≥ 5 Sec	0.09 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring checks the CAN initialization function has taken too long to finish. The access to message Ram by the CAN-Core is handle through a message interface register. In each cycle a CAN register bit is checked to determine if the bit is set. A fault is set if the loop lasts longer than a threshold	Number of CAN cycles	> 1000	Ignition key	= On	0.01 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 30sec without braking.					
Control Module Communication High Speed CAN Bus Off - Generic	U0073	The CAN (Control Area Network) bus A state is monitored periodically. A fault is set if the bus is in "Bus Off" state.	CAN bus A state	= Bus off	System voltage AND System voltage ECU is sending/receiving on CAN AND ECU Power Mode transition diagnostic enable delay timer	> 7.5 V < 16 V = True ≥ 5 Sec	0.24 [Sec]	Type A, 1 Trip
		This monitoring checks the CAN initialization function has taken too long to finish. The access to message Ram by the CAN-Core is handle through a message interface register. In each cycle a CAN register bit is checked to determine if the bit is set. A fault is set if the loop lasts longer than a threshold	Number of CAN cycles	> 1000	Ignition key	= On	0.01 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 30sec without braking.					
Control Module Internal Performance	P0606	This monitoring strategy checks for proper the CPU Compare Module functionality. The software is executed on 2 CPU cores simultaneously instruction by instruction (lock step mode). The output of both cores is compared by the CPU Compare Module. A self test runs at Init to verify that the CPU Compare Module is working properly. A fault is set if the self test failed.	Core Compare Module selfest	= failed	System voltage	> 6.9 V	Immediately	Type A, 1 Trip
		This monitoring strategy checks if there is a Central Processing Unit (CPU) exception. If a CPU exception occurs, normal program execution is no longer allowed (e.g. aborts from privileged modes). A fault is set if a data abortion, a prefetch abortion, or an undefined instruction occurs.	Data abortion occurs OR Prefetch abortion occurs OR Undefined instruction occurs	= True = True = True	Ignition key	= On	Immediately	Type A, 1 Trip
		This monitoring strategy checks if the execution of a sensitive process task jitters too much. A fault is set if the real process execution time is greater than its ideal start time increased by a percentage.	The execution time of the internal system process task (non ibooster systems)	> Process Ideal Time + 5% Sec	Ignition key	= On	Immediately	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring checks the TPSW customer function accessibility area into the RAM. A fault is set if any customer SW variable or function tries to access outside its restricted area.	SW variable or function tries to access outside its restricted area	= True	Ignition key	= On	Immediately	Type A, 1 Trip
		This monitoring strategy checks if the A/D converter reference voltage is out of range. A fault is set if the ADC band gap voltage is outside the allowable range.	Analog Digital Converter voltage OR Analog Digital Converter voltage	< 1.145 V > 1.345 V	Ignition key	= On	Immediately	Type A, 1 Trip
		This monitoring strategy checks if the ECU internal electrical enable line cannot be switched on or off via the software. The electrical enable line is set directly by a microcontroller pin. When the microcontroller port changes, the enable line may take the value set by the microcontroller. If the enable line does not change this means that the ECU enable line has shorted to the ground or to the supply voltage line (3.3V). A fault is set if the ECU internal electrical enable line value is different than the value requested from the software.	The ECU internal electrical enable line cannot be switched ON or OFF by the software	= True	System voltage AND Fail-Safe Logic Test	> 6.9 V = On	0.45 [Sec]	Type A, 1 Trip
		This monitoring strategy checks the ECU (Electronic Control Unit) internal hydraulic enable line. A fault is set if the ECU internal electrical enable line either is shorted to ground, is shorted to the supply voltage, or cannot be switched ON or OFF by the software.	ECU internal hydraulic enable line has a short to ground OR ECU internal hydraulic enable line has a short to supply voltage (3.3V) OR The ECU internal hydraulic enable line cannot be switched ON or OFF by the software	= True = True = True	System voltage	> 6.9 V	0.45 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the enable line is set properly. After the Fail-Safe Logic Test has finished the ECU (Electronic Control Unit) internal hydraulic and electrical enable lines are monitored. It is expected that the enable lines always stay at a high level. A fault is set if an interruption (an enable line at low level) of the hydraulic or electrical enable line is detected.	ECU internal hydraulic line state For time OR ECU internal electrical line state For time	= low > 0.05 Sec = low > 0.05 Sec	System voltage	> 6.9 V	0.05 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the error pin event counter is in range. The monitor pulls the error pin to test the event counter within the system chip. To prevent an electrical shutdown (which would disturb communication) during the provoked error pin event, the electrical decouple bit is set. A fault is set if the error pin event counter does not increment, or if the decouple bit is not reset.	Error pin event counter not incremented	= True	Ignition key	= On	1 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if there is a HET exception. A fault is set if a failure is detected in the EEPROM (Electrically Erasable Programmable Read-Only Memory) cell.	Failure detected in register HET	= True	Ignition key	= On	Immediately	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks for proper of the High End Timer Transfer Unit (HETTU) addressing functionality. When a pointer error is detected, the HETTU state switches to a specific value. A fault is set if the HETTU is in the pointer error state.	High End Timer Transfer Unit Status	= "pointer error"	Ignition key	= On	Immediately	Type A, 1 Trip
		This monitoring strategy checks the High End Timer Transfer Unit (HETTU) internal bus. A fault is set if a bus error is detected.	High End Timer Transfer Unit Status	= "bus error"	Ignition key	= On	Immediately	Type A, 1 Trip
		This monitoring strategy checks the High End Timer Transfer Unit (HETTU) internal bus. A fault is set if a busy bit error is detected.	High End Timer Transfer Unit Status	= "busy bit error"	Ignition key	= On	Immediately	Type A, 1 Trip
		This monitoring strategy checks if there was a High End Timer Transfer Unit (HETTU) exception. A fault is set if an exception occurs.	Failure detected in register INT	= True	Ignition key	= On	Immediately	Type A, 1 Trip
		This monitoring strategy checks whether any tasks failed to call. A fault is set if a task did not start in the expected time.	Watchdog detects a missing task	= True	Ignition key	= On	Immediately	Type A, 1 Trip
		This monitoring strategy checks the feedback of the Fail-Safe Logic Test. The Fail-Safe Logic Test tests whether the system chip switches off the gate actuation of the Booster Master Switch when it detects a missing watchdog trigger. A fault is set if the feedback shows that the valve relay gate is not switched off.	Missing watchdog trigger AND No switched off valve relay gate	= True = True	System voltage	> 6.9 V	0.45 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the valve relay gate actuation is properly switched off via a Serial Peripheral Interface (SPI) command during the Fail-Safe Logic Test. A fault is set if the feedback shows that the valve relay gate is not switched off.	No switch off of the valve relay gate actuation via SPI	= True	System voltage	> 6.9 V	0.45 [Sec]	Type A, 1 Trip
		This monitoring strategy checks the watchdog fault counter of the system integrated circuit. A fault is set if the value of this error counter exceeds a threshold.	Error counter	> 3	System voltage AND	> 6.9 V	Immediately	Type A, 1 Trip
		This monitoring strategy checks if the watchdog trigger is received as expected. An incorrect watchdog trigger signal is sent to the system chip watchdog function which increments the watchdog error counter. A fault is set if the watchdog fault counter is not incremented.	Incorrect watchdog data sent to chip	= True	System voltage	> 6.9 V	1 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the watchdog trigger is received within a certain time by the system chip. A fault is set if not all watchdog tasks are executed within a certain period of time.	Number of watchdog tasks done	< Number of watchdog tasks	System voltage	> 6.9 V	1 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks the status of the watchdog. During the initialization test the watchdog status feedback from the system chip is tested against several patterns according to the ongoing sub test. A fault is set if the watchdog status is not as expected.	Watchdog status	≠ expected watchdog status	System voltage	> 6.9 V	1 [Sec]	Type A, 1 Trip
		This monitoring strategy checks the status of the watchdog. After the initialization test has finished, the status of the watchdog is continuously monitored. A fault is set if the watchdog status is not as expected.	Watchdog status	≠ expected watchdog status	System voltage	> 6.9 V	0.05 [Sec]	Type A, 1 Trip
		This monitoring strategy checks for correct NMI handling. The Error Signal Module is the central module at the microcontroller level; it handles severe microcontroller core failures and peripheral failures, and coordinates the logic tests during start-up. A fault is set if the Non-Maskable Interrupt handler detects a failure during initialization tests.	Non-maskable Interrupt is detected	= True	Ignition key	= On	Immediately	Type A, 1 Trip
		This monitoring strategy checks if a severe microcontroller core or peripheral failure has occurred. The Error Signal Module (ESM) is the central module at the microcontroller level; it handles severe microcontroller core and peripheral failures. A fault is set when a severe microcontroller core or peripheral failure is detected.	A microcontroller core failure via Error Signal Module is detected OR Peripheral failure via ESM is detected	= True = True	Ignition key	= On	Immediately	Type A, 1 Trip
		This monitoring strategy checks whether the HET has the proper reference signal frequency. The monitor compares the defined frequency with the actual reference signal frequency, which is calculated by the HET. A fault is set if the difference between the defined frequency and the actual frequency exceeds a threshold.	Absolute(Defined frequency - calculated frequency) / defined frequency	> 0.05	Ignition key	= On	Immediately	Type A, 1 Trip

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		<p>This monitoring strategy checks the Serial Peripheral Interface (SPI) functionalities and failures handling of the Application Specific Integrated Circuit (ASIC) used in the system. To do so, the SPI component provides special functions to perform the following tests :</p> <ul style="list-style-type: none"> - reading from/writing to an undefined address EEPROM (Electrically Erasable Programmable Read-Only Memory) cell - writing to a non-writable EEPROM cell - reading a EEPROM cell with a parity failure during transmission - reading a EEPROM cell with a clock failure during transmission <p>For each of these tests, a certain fault response is expected from the ASIC. A fault is set if at least one fault response is not as expected.</p>	<p>No or wrong error response from ASIC while reading from an undefined address register OR No or wrong error response from ASIC while writing to an undefined address register OR No or wrong error response from ASIC while writing to a non-writable register OR No or wrong error response from ASIC while reading a register with a parity error in frame 1 during transmission OR No or wrong error response from ASIC while reading a register with a parity error in frame 2 during transmission OR No or wrong error response from ASIC while reading a register with a clock failure (less clock pulses) during transmission OR No or wrong error response from ASIC while reading a register with a clock failure (more clock pulses) during transmission</p>	<p>= True = True = True = True = True = True = True</p>	System voltage	> 6.9 V	immediately	Type A, 1 Trip
		<p>The monitoring checks the received data by the Application Specific Integrated Circuit (ASIC). The ASIC of the system is connected to the microcontroller via a Serial Peripheral Interface (SPI). A fault is set if not all data has been transmitted or received.</p> <p>Parity check - The ASIC of the system is connected to the microcontroller via a serial Peripheral Interface (SPI). The monitoring checks the received data by the ASIC. A fault is set if the calculated parity does not match the parity bit.</p> <p>Bit check - The ASIC of the system is connected to the microcontroller via a serial Peripheral Interface (SPI). The monitoring checks the received data by the ASIC. A fault is set if at least one bit of the actual transmitted data is not equal to the transmit bit in register.</p> <p>Rationality check - The ASICs of the system is connected to the microcontroller via a serial Peripheral Interface (SPI). When ASIC detects a transmission failure, it sends an error frame via the SPI. The monitoring checks the frames transmitted via the SPI. A fault is set if an error frame is transmitted.</p>	<p>Length of received data OR Calculated parity of the received data OR Time out error OR Actual transmitted bits OR Clock failure OR Error frame</p>	<p>≠ length of send data ≠ received parity bit = True ≠ bits in register = True = bits in register</p>	Ignition key	= On	0.001 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks if there is a Serial Peripheral Interface (SPI) communication failure. The Application Specific Integrated Circuit (ASIC) of the system is connected to the microcontroller via a SPI. The microcontroller includes hardware monitoring of the ASIC to recognize failures of the necessary input signals. The Monitor reads the results of certain of this hardware monitoring by reading out the ASIC EEPROM (Electronically Erasable Programmable Read-Only Memory) cell via Serial Peripheral Interface. A fault is set if charge pump failure bit, or clock-input-signal failure bit, or internal-oscillator-circuit failure bit is set.	Charge-pump failure bit is set OR Clock-input-signal failure bit is set OR Internal-oscillator-circuit failure bit is set		Ignition key AND First cyclic transmission to the ASICs occurred	= On = True	0.2 [Sec]	Type A, 1 Trip
		This monitoring strategy checks the voltage comparators of the Application Specific Integrated Circuit (ASIC). The ASIC has several voltage comparators to monitor the level of different voltage supplies. These comparators are tested at start-up for correct functionality, and the result of the test is stored as a EEPROM (Electronically Erasable Programmable Read-Only Memory) cell value. A fault is set if there is an error flag when the monitor reads the EEPROM cell value.	Error flag is set in a defined register	= True	System voltage	> 6.9 V	Three consecutive ignition cycles	Type A, 1 Trip
		This monitoring strategy checks if there is a Serial Peripheral Interface (SPI) communication failure. The L99H01 Application Specific Integrated Circuit (ASIC) of the system is connected to the microcontroller via a SPI. The microcontroller includes hardware monitoring of the ASIC to recognize failures of the necessary input signals. The Monitor reads the results of certain of this hardware monitoring by reading out the ASIC EEPROM (Electronically Erasable Programmable Read-Only Memory) cell via Serial Peripheral Interface. A fault is set if charge-pump failure bit, or watchdog failure bit, or Thermal failure bit is set.	Charge-pump failure bit is set OR Watchdog failure bit is set OR Thermal failure bit is set	= True = True = True	Ignition key AND First cyclic transmission to the L99H01 ASICs occurred	= On = True	0.005 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if there is a timeout of the Serial Peripheral Interface (SPI) communication to Application Specific Integrated Circuit (ASIC). The Application Specific Integrated Circuit (ASIC) of the system is connected to the microcontroller via a Serial Peripheral Interface (SPI). The goal is to monitor the duration of the SPI transmission. A fault is set if the SPI transfer to ASIC is not finished within a defined period.	Duration of SPI transfer to ASIC	> 0.005 Sec	Ignition key AND Cyclic Tasks Started	= On = True	0.01 [Sec]	Type A, 1 Trip

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		<p>The monitoring checks the received data by the Application Specific Integrated Circuit (ASIC). The ASIC of the system is connected to the microcontroller via a Serial Peripheral Interface (SPI). A fault is set if not all data has been transmitted or received.</p> <p>Parity check - The ASIC of the system is connected to the microcontroller via a serial Peripheral Interface (SPI). The monitoring checks the received data by the ASIC. A fault is set if the calculated parity does not match the parity bit.</p> <p>Bit check - The ASIC of the system is connected to the microcontroller via a serial Peripheral Interface (SPI). The monitoring checks the received data by the ASIC. A fault is set if at least one bit of the actual transmitted data is not equal to the transmit bit in register.</p> <p>Rationality check - The ASICs of the system is connected to the microcontroller via a serial Peripheral Interface (SPI). When ASIC detects a transmission failure, it sends an error frame via the SPI. The monitoring checks the frames transmitted via the SPI. A fault is set if an error frame is transmitted.</p>	<p>Length of received data OR Calculated parity of the received data OR Clock failure OR Actual transmitted bits OR Error frame received</p>	<p>≠ length of send data ≠ received parity bit = True ≠ bits in register ≠ bits in register</p>	Ignition key	= On	0.05 [Sec]	Type A, 1 Trip
		This monitoring strategy checks for exceptions in Operating System. A fault is set if an exception occurs in the Operating System.	OS-exception occurs	= True	Ignition key	= On	Immediately	Type A, 1 Trip
		Detection of software component internal execution errors	Internal software state type	= Invalid	Ignition key	= On	0.01 [Sec]	Type A, 1 Trip
		This monitoring checks the TPSW-PBC function accessibility area into the RAM. A fault is set if the PBC SW variable or function tries to access outside its restricted area.	PBC SW function stays within its restricted area	= False	Ignition key	= On	0.02 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the Static Random Access Memory (SRAM) and peripheral Random Access Memory (RAM) are initialized or not. The SRAM and peripheral RAM are cleared at power-up. Then This monitoring reads every SRAM and RAM addresses. A fault is set if at least one addresses is not initialized to zero.	At least one RAM or SRAM bit	≠ 0	Ignition key	= On	Immediately	Type A, 1 Trip
		This monitoring strategy checks for proper pull-up resistor functionality. It monitors whether the motor relay pull-up (MRPU) switch inside the Application Specific Integrated Circuit (ASIC) is working as expected. A fault is set if the MRPU pin status does not match the selected switch state.	Motor relay pull-up pin status not correct	= True	System voltage AND Hydraulic pump motor	> 6.9 V = Off	0.5 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks if a wrong hexfile was flashed in the AECU. The purpose of RTP pins is to do measurement of RAM variables. A fault is set if the RTP Enable pin is stuck to a high.	RTP Enable pin stuck to high	= True	Ignition key	= On	Immediately	Type A, 1 Trip
		The System Mode Manager (SMM) asks in parallel with multiple system modes for the individual modules. To do this, it receives requests from different parts of software which are initialized at the beginning and after a while a valid value is given which is not "init" value. A fault is set if after a while one requester is still in init value.	One requester still in init value for time	> 3.6 Sec	Ignition key	= On	3.6 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the microcontroller stack has over or underflowed. During initialization, stack memory cells are set at the beginning and at the end of the stack area: these Stack memory cells are checked periodically. A fault is set if one of these Stack memory cells has been overwritten.	End-stack word overwritten OR Beginning-stack word overwritten	= True = True	Ignition key	= On	0.04 [Sec]	Type A, 1 Trip
		During system start-up, the time required to configure the application software (ASW) is monitored. A fault is set if the configuration lasts longer than a defined amount of time.	ASW configuration time	> 5 Sec	Ignition key	= On	5 [Sec]	Type A, 1 Trip
		This monitoring strategy checks for an unsupported Bootblock and FSW clock configuration in ECU. Within an ECU, the Bootblock allows actualizing the application which is called FSW. A failure is set if the Bootblock and FSW clock settings are different.	Bootblock and FSW clock settings are different	= True	Ignition key	= On	Immediately	Type A, 1 Trip
		This monitoring strategy checks if an internal fault has occurred in the operating system. A fault is set if software interrupts have occurred but: - the interrupt is invalid. - An interrupt lock release is called without previous lock. - not all interrupts are released.	Software interrupt occurred AND { Invalid interrupt occurred OR Interrupt lock release is called without previous lock OR Not all interrupts are released OR Interrupt lock time }	= True = True = True = True > 0.001 Sec	Ignition key	= On	Immediately	Type A, 1 Trip
		This monitoring strategy checks if interrupts are properly running. The error signal module is the central module in the microcontroller level. It handles severe microcontroller core failures or peripheral failures, and coordinates the logic tests during start-up. A fault is set if no or not expected non-maskable interrupt occurs during Init tests.	Failure detected during safety logic startup tests	= True	System voltage	> 6.9 V	Immediately	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks if the software is properly configured for the hardware. Software version and device identifiers of the Application Specific Integrated Circuit (ASIC) and of the microcontroller are compared with the software version and identifiers of the configuration software. A fault is set if a least one ID or software version does not match.	Received ID of microcontroller is not identical with the ID stored in the software	= True	Ignition key	= On	0.03 [Sec]	Type A, 1 Trip
		This monitoring checks the valve channels during the freewheeling test. This test consists of splitting up several small pulses to slowly accelerate the pump. The acceleration is slow in order to avoid noise generation. A fault is set if an unused valve channel is detected during the freewheeling test or if the Valve-Driver-ASIC (Application Specific Integrated Circuit) activation channel is defective.	Unused valve channel detected OR Valve-Driver-ASIC activation channel defect	= True = True	Ignition key AND FreeWheeling Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This is a monitoring of the Valve-Driver-ASIC (Application Specific Integrated Circuit) freewheeling path, which slowly accelerates the pump to avoid noise generation. A fault is set if the Valve-Driver-ASIC freewheeling path was activated for a longer time period than the maximum freewheeling time.	Valve-Driver-ASIC freewheeling path was activated for longer time than freewheeling time	> 0.03 Sec	Ignition key AND Valve test	= On = Off	0.03 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the valve is activated properly. During an activation of all valves, the feedback gate of the Valve-Driver-ASIC (Application Specific Integrated Circuit) shows valve activation although the Hydraulic Enable of the Valve-Driver-ASIC is low with. A fault is set if the feedback duty on (Gate ON) for maximum valve actuation during testing exceeds a calibrated threshold.	Feedback duty on (Gate ON) for maximum actuation of valve under test	= 100 %	Ignition key	= On	0.005 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if there is a pulse width modulation (PWM) failure in all 12 valves. A fault is set if the PWM check sequence is not completed during the duration of the Valve Actuation Register Test (VART).	Pulse width modulation check sequence is not completed during the running period of Valve Actuation Register Test	= True	Ignition key AND PWM Monitor OR Valve Actuation Register Test OR Vaulve Drift Check	= On = On = On = On	0.005 [Sec]	Type A, 1 Trip
		This monitoring strategy checks the Silent Valve Driver Test (SVDT) results. SVDT is a periodic check that is initiated by the software. The test runs automatically at the Application Specific Integrated Circuit (ASIC), and in case of a positive result, feedback is sent to the software via the SPI (Serial Peripheral Interface) bus. A fault is set if successful feedback is not received from the finished Silent Valve Driver Test (VDT) via the SPI-bus.	Feedback of a successful finished Silent Valve Driver Test via SPI-bus not received	= True	Ignition key	= On	0.015 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks if the configuration bits of the Valve-Driver-ASIC register are written correctly. A fault is set if the read data of the Application Specific Integrated Circuit (ASIC) configuration bits do not match with the corresponding written data in ASIC.	Configuration of Valve-Driver-ASIC register not correct	= True	Ignition key AND Hydraulic Enable signal high	= On = True	0.03 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the result of the built-in self-test (BIST) is correct. The built-in self-test (BIST) is an internal hardware valve driver test triggered by the software. It checks the functionality of both arithmetic logic units (ALU) of the current controller. Both ALUs are triggered by different patterns. A fault is set if the BIST results are not as expected.	Valve driver BIST result from ALU not as expected	= True	Ignition key AND BuildInSelfTest (BIST)	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the serial high end timer transmission between the microcontroller and the valve driver has failed. A fault is set if a wrong protocol, timing deviation, or lack of data transmission is detected.	SHET protocol wrong OR Timing deviation OR No data transmission	= True = True = True	Ignition key	= On	0.03 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the VART (Valve Activation Register Test) detects an error. The internal valve driver activation registers are tested using the VART in order to detect any crosstalk or stuck situations. All the valves are opened and closed sequentially according to a matching test pattern. A valve opening draws a low valve relay current. A fault is set if an open load or under current state is not detected for each valve actuation.	Valve relay voltage / Internal supply voltage OR Valve Current	< 0.33 > 0.1 A	Ignition key	= On	140 [Sec]	Type A, 1 Trip
		This monitoring checks the plausibility of the valve activation state bit. The valve opening draws a low valve relay current. The bit should be set when the valve is off. A fault is set if the bit is set even though the ratio of valve relay output voltage (UVR) to internal supply voltage (UBVR) indicates that the valve is on.	Valve relay voltage / Internal supply voltage AND Valve actuation	> 0.5 = True	Ignition key AND Valve relay supply voltage	= On > 6.9 V	120 [Sec]	Type A, 1 Trip
		This monitoring compares the valve relay output voltage read by the Application Specific Integrated Circuit (ASIC) with the valve relay output voltage read by the Analog to Digital Converter (ADC) in order to check that the valve driver ensures circuit continuity. A fault is set if the difference between the two voltages is above a calibrated threshold	Absolute(measured ASIC voltage - read ADC voltage)	> 0.4 V	Ignition key AND SilentValveDriverTest (SVDT)	= On = On	0.03 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if a low ohmic side circuit from the valve voltage (UVR) to the supply voltage (UBVR) occurs during the resistor measurement. During this measurement, the valve relay output voltage should ideally be zero. A fault is set if UVR is higher than a calibrated threshold.	Valve relay output voltage	> 1.26 V	Ignition key AND Resistor Measurement Test	= On = On	0.015 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks if there are internal and input signal failures of the Application Specific Integrated Circuit (ASIC). The ASIC is connected to the microcontroller by Serial Peripheral Interface (SPI). The monitor reads the results of this hardware monitoring EEPROM (Electrically Erasable Programmable Read-Only Memory) cell using Serial Peripheral Interface. The bits of the EEPROM cell are set by the hardware logic "Voltage-Pre_regulator-Mode". A fault is set if the voltage-pre-regulator-mode failure bit is set.	Voltage-pre-regulator-mode failure bit is set	= True	Ignition key	= On	0.2 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if wheel speed signals are correct. The Multiplexer IC inside the EBCU (Electronic Brake Control Unit) handles the EBCU internal transmission of the wheel speed sensor signals of all four wheels. To ensure safe EBCU internal transmission these signals are multiplexed and the multiplexed signal is sent on a separate signal path within EBCU. The Multiplexer IC signal check compares the EBCU internal signals with the multiplexed signal. A fault is set if the wheel speed signals and the multiplexed signal are not identical.	Wheel speed signal and multiplexed wheel speed sensor not identical	= True	System voltage AND Wheel speed sensor test completed	> 6.9 V = True	dependent on vehicle speed	Type A, 1 Trip
		This monitoring strategy checks if the current wheel speed sensor configuration is correct via Serial Peripheral Interface (SPI). The system supports different wheel speed sensor configurations. A fault is set if, for a calibrated duration, there is a mismatch between the current wheel speed sensor mode software configuration (stored in a register) and the hardware configuration.	Mismatch between current WSS Mode software configuration stored in a register and the hardware configuration For time	= True > 0.1 Sec	Ignition key AND First cyclic transmission to ASIC	= On = True	0.1 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if there is an hardware defect. The Wheel Speed Sensor (WSS) System Integrated Circuit performs a check of the WSS wirings at System start-up automatically by switching sensor supply lines separately and storing the states of input comparators in a buffer. The buffer content is then evaluated in software. A fault is set if the buffer content shows a physically impossible condition.	Detected wheel speed sensor line condition is physically impossible	= True	System voltage AND Initial wheel speed sensor hardware tests AND Started with Hardware Reset OR Started with Software Reset	> 6.9 V = On = True = True	0.015 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 30sec without braking. Accelerate vehicle to at least 18.6 mph and hold the speed for at least 20s.					

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
Control Module Long Term Memory Performance	P062F	This monitoring strategy checks if there is enough available space in the EEPROM (Electrically Erasable Programmable Read-Only Memory) to allocate a data field. A fault is set if the size of the data field is bigger than the amount of available space in EEPROM.	Data field size to allocate	> Available Space	System voltage AND Ignition key	> 6.9 V = On	Immediately	Type A, 1 Trip
		This monitoring strategy checks if it is possible to write data in persistent storage. Every write access to non-volatile memory in the EEPROM (Electrically Erasable Programmable Read-Only Memory) is protected by timeout monitoring and data verification after writing. The Persistent Data Manager checks persistent data access in EEPROM. A fault is set if a write operation occurs or if data verification after writing fails.	Writing operation AND Read data different from written data	> 0.025 Sec = True	Ignition key	= On	immediately	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					
Control Module Long Term Memory Reset	P0603	This monitoring checks the write result at the end of the EEPROM write procedure. A fault is set if a cell is invalid which results to a read back error after writing	Read back error	= True	Ignition key	= On		Type A, 1 Trip
		This monitoring strategy checks if the customer identifier is correct. During initialization, the persistent data manager compare the EEPROM (Electrically Erasable Programmable Read-Only Memory) cell value with the expected customer ID. A fault is set if the expected customer ID does not match the stored customer ID.	Stored customer ID	≠ expected customer ID	System voltage AND Ignition key	> 6.9 V = On	Immediately	Type A, 1 Trip
		This monitoring strategy checks if the system has not found the enhanced platform software end marker, which is used to help the system find the end of the data. At ignition state, the Persistent Data Manager checks the content of the EEPROM (Electrically Erasable Programmable Read-Only Memory). A fault is set if the enhanced platform software end marker has not been found.	No enhanced platform software end marker in EEPROM	= True	System voltage AND Ignition key	> 6.9 V = On	Immediately	Type A, 1 Trip
		This monitoring strategy checks if the stored data field size is correct. At ignition state, the Persistent Data Manager checks the content of the EEPROM (Electrically Erasable Programmable Read-Only Memory). A fault is set if a data field size in EEPROM does not match the corresponding data item configuration in the software.	Data field size in the EEPROM	≠ data size configuration in software	Ignition key	= On	Immediately	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks the reading accessibility of the EEPROM (Electrically Erasable Programmable Read-Only Memory). During initialization, the Persistent Data Manager checks the content of the EEPROM. A fault is set if an access error occurs while reading EEPROM.	Read error occurs OR Not expected Non-Markable Interrupt detected	= True = True	System voltage	> 6.9 V	Immediately	Type A, 1 Trip
		This monitoring strategy checks if the EEPROM (Electrically Erasable Programmable Read-Only Memory) memory is readable. Besides the management of the electronic stability system the Electronic Brake Control Unit (EBCU) performs various functional checks. Initially and periodically, the memory content is checked by calculating a 64-bit CRC (Cyclic Redundancy Check) value and comparing it with the checksum generated during the software build process. This algorithm checks the complete memory content. A fault is set if it is not possible to read back data from EEPROM or if the data read back from EEPROM is not valid.	EEPROM data cannot be read OR EEPROM data not valid	= True = True	Ignition key	= On	Immediately	Type A, 1 Trip
		This monitoring strategy checks if EEPROM (Electrically Erasable Programmable Read-Only Memory) access is possible. The reference resistor is used to calculate the reference current. A fault is set if it is not possible to load the reference resistor value stored in EEPROM. In this case, the EEPROM value is defective or unreadable.	Cannot load the reference resistor value stored in the EEPROM	= True	Ignition key AND Resistor Measurement Test	= On = On	Immediately	Type A, 1 Trip
		This monitoring strategy checks if the reference resistor voltage stored in EEPROM (Electrically Erasable Programmable Read-Only Memory) matches the measured resistor voltage. The reference resistor voltage is measured in the factory. A fault is set if the absolute difference between the reference resistor voltage stored in EEPROM and the measured resistor voltage exceeds a calibrated threshold.	Absolute(Reference resistor voltage stored in the EEPROM - Measured resistor voltage)	> 10 %	Ignition key AND Resistor Measurement Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitor checks the configuration of the wheel speed sensors after ignition on. The failure is do to a PDM access problem or a wrong value in the wheel speed sensor type. A failure is set if after ignition ON, the configuration of the wheel speed sensor type is not possible.	Wheel speed sensor type configuration possible	= False	Ignition key	= On	immediately	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
Control Module Not Programmed	P0602	This monitoring check if the Electronic Brake Control Module (EBCM) has not been programmed with calibration data set. A fault is set if the byte 5 of the internal customer data for each of the 5 calibration modules is equal to ACII D	Byte 5 of the internal customer data for each of the 5 calibration modules is equal to ACII D	= True	Ignition key	= On	Immediately	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 30sec without braking.					
Control Module Random Access Memory (RAM)	P0604	This monitoring strategy checks the values of a specific RAM area. Furthermore, the address decoder is tested using test patterns to ensure bus integrity. The test writes different patterns at the addresses of this RAM area. Addresses are then read out and a signature for all the readout values is calculated. The original content in RAM is afterwards rewritten. The order of the patterns is chosen so that the signature the multibit and coupling failures can be set during the signature evaluation. A fault is set if a multibit or coupling failure is detected.	Multi-bits failure detected OR Coupling failure detected OR Address decoder test detects an error	= True = True = True	System voltage	> 6.9 V	Immediately	Type A, 1 Trip
		This monitoring strategy checks correct functionality of Random Access Memory (RAM) through a programmable Built In Self Test running in start-up phase.	Memory test fails	= True	Ignition key	= On	Immediately	Type A, 1 Trip
		This monitoring strategy checks if there is a single bit error at RAM. Because of Error Correction Code, RAM single-bit errors are always corrected. A fault is set if the number of bit errors exceeds a threshold.	Number of detected single-bit errors	> 2	Ignition key	= On	Immediately	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					
Control Module Read Only Memory (ROM)	P0601	This monitoring strategy checks if the CRC (Cyclic Redundancy Check) of Flash EEPROM (Electronically Erasable Programmable Read-Only Memory) is correct. Initially and periodically the complete Flash EEPROM contents are checked by calculating a CRC value and comparing it with the checksum generated during the software build process. A fault is set if a double bit error of Flash EEPROM is detected, or if more than a defined number of single bit errors are detected (otherwise, single bit errors are corrected).	Double bit error detected OR Number of detected single-bit errors	= True > 1	System voltage	> 6.9 V	Immediately, during start-up or respectively after 60 sec for cyclic flash checksum test.	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					
Ignition Switch - Accessory Position - Circuit Low	P2537	Detects an accessory position circuit open	Accessory	= False	Propulsion System Active Propulsion System Active Time	= True > 0.5 Sec	0.5 [Sec]	Type B, 2 Trips

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
Ignition Switch - Circuit High	P2535	Detects if the Run/Crank input circuit is high	Short to Battery	> 5 V	CAN Communication And ECM Run/Crank Active Data	= Enabled = False	2.5 [Sec]	Type A, 1 Trip
Ignition Switch - Circuit Low	P2534	Detects if the Run/Crank input circuit is low	Short to Ground Or Open Condition	< 2 V = True	CAN Communication And ECM Run/Crank Active Data	= Enabled = Active	2.5 [Sec]	Type A, 1 Trip
Internal Control Module A/D Processing Performance	P060B	This monitoring strategy checks the conversion time of the ADC (Analog Digital Converter). The ADC periodically reads an analog signal and converts it into digital values. Before starting a new conversion, the monitor checks that the previous conversion is finished. A fault is set if the previous conversion is not finished for a number of checks.	Number of times that the previous analog to digital conversion is not finished	> 9	Ignition key	= On	0.003 [Sec]	Type A, 1 Trip
		This monitoring strategy checks proper functionality of ADC self-test. To do this, ADC channels are switched to two predefined internal microcontroller resistors to measure defined (voltage) levels (high and low). The absolute differences between the two measurements are calculated in unit digits. A fault will be set if the difference is greater than a threshold.	Absolute(difference between the two ADC measurements)	> 540 digitSec	Ignition key	= On	0.2 [Sec]	Type A, 1 Trip
		This monitoring strategy checks for correct internal Analog Digital Converter (ADC) functionality by comparing the analog motor voltage read in by the ADC with the digital motor voltage calculated by the Application Specific Integrated Circuit (ASIC) while the hydraulic pump is active. A fault is set if the deviation between the hydraulic pump motor voltage read by the ADC (analog) and the hydraulic pump motor voltage calculated by the ASIC (digital) exceeds a calibrated threshold.	Hydraulic pump motor voltage read by ADC (analog)/hydraulic pump motor voltage calculated by ASIC (digital)	> 0.25	Ignition key AND Hydraulic pump motor	= On = On	0.04 [Sec]	Type A, 1 Trip
		DTC Pass	Drive off, accelerate up to 37.2 mph and maintain this speed for at least 5s					
Left Front Inlet Control	C0010	This monitoring strategy checks if the Valve-Driver-ASIC (Application Specific Integrated Circuit) FreeWheeling component is defective. A fault is set if the valve driver freewheeling cannot be switched on or off or if the trigger state is incorrect.	Freewheeling of valve driver cannot be switched OR Trigger state not correct	= True = True	Ignition key AND Resistor Measurement Test	= On = On	0.015 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks if the valve actuation corresponds to the expected value. The basic valve monitoring is triggered by the coordinator via the control message. A fault is set if the valve actuation is different from the expected value for a calibrated period of time.	Valve actuation	≠ expected value	Ignition key AND Resistor Measurement Test	= On = Off	0.03 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the current through a valve is too high or too low. A fault is set if the valve current is above a calibrated threshold_1 or below a calibrated threshold_2 for a calibrated number of failed tests.	(Current through the valve OR Current through the valve) AND Both for a number of failed tests	> 0.12 A < 0.085 A > 5	Ignition key AND Leakage Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks the voltage at the output Qx or at the gate to detect if the Valve-Driver-ASIC (Application Specific Integrated Circuit) output driver is not functioning correctly. All PWM (Pulse Width Modulation) signal positive edges are counted, and the low time duration is measured. The resulting value is read out via SPI (Serial Peripheral Interface). The high and low limits of the real PWM signal, which are set by the output driver, are calculated using the measured number of edges and the low time. The calculated high and low limits depend on the activation used. A fault is set if the current activation value is outside the calculated limits.	Measured actuation duty OR Measured actuation duty AND Both for a number of times	< Set Actuation Duty 20% > Set Actuation Duty + 20% > 5	Ignition key AND Resistor Measurement Test AND Leakage Test AND Valve Activation Register Test AND Silent Valve Driver Test	= On = Off = Off = Off = Off	0.05 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the transistor gates are set properly. Qx is the command sent to the transistor gate which commands the valve motor. The Qx monitor compares the expected value of Qx (the calculated Qx-ON/OFF value which is dependent on the current set valve activation) with the actual value of Qx (Qx-ON/OFF from the valve-related SPI (Serial Peripheral Interface) register) in order to check for correct output driver functionality (gate on/off). A fault is set if the actual Qx value does not match the expected Qx value.	(Measured Gate On Actuation Duty OR Measured Gate Off Actuation Duty) AND For a number of failed tests	< 95 % > 5 % > 5	Ignition key AND Resistor Measurement Test AND Leakage Test AND Valve Activation Register Test AND Silent Valve Driver Test	= On = Off = Off = Off = Off	0.03 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the valve-related resistor value is out of range during the resistor measurement. This resistor value is calculated by taking the mean of the voltage through the resistor. A fault is set if the valve resistor value is too high or too low.	Comparison of calculated resistance and measured resistance OR Comparison of calculated resistance and measured resistance AND For a number of times	> 0.2 Of calculated resistance < -0.2 Of calculated resistance > 2	Ignition key AND Resistor Measurement Test	= On = On	0.015 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks if there is a short circuit between valves or a defective coil (due to Valve-Driver-ASIC (Application Specific Integrated Circuit) internal failure such as OpenLoad, UnderCurrent, OverCurrent, OverTemp, PGndLost or DxLost) during the Valve-Driver-ASIC Silent Valve Driver Test (SVDT). A fault is set if the ASIC current or temperature is below a calibrated threshold_1 or above a calibrated threshold_2, or if the High Side Switch Line Loss is below a calibrated threshold, for a calibrated number of failed tests.	(Current at ASIC OR Current at ASIC OR Temperature at ASIC OR Temperature at ASIC OR High Side Switch Line Loss) AND For a number of times	< 0.05 A > 0.14 A < 25 °C > 140 °C < 0.005 A > 2	Ignition key AND Silent Valve Driver Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the internal valve-driver-ASIC (Application Specific Integrated Circuit) register matches the current actuation during the Valve Actuation Register Test (VART). A fault is set if the measured gate actuation duty during the test actuation exceeds a calibrated threshold.	Measured gate actuation during test actuation AND For a number of times	< 0.005 A > 2	Ignition key AND Valve Activation Register Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.		See Disabling DTCs	Not Fault Active		
DTC Pass								
Left Front Outlet Control	C0011	This monitoring strategy checks if the valve actuation corresponds to the expected value. The basic valve monitoring is triggered by the coordinator via the control message. A fault is set if the valve actuation is different from the expected value for a calibrated period of time.	Valve actuation	≠ expected value	Ignition key AND Resistor Measurement Test	= On = Off	0.03 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the current through a valve is too high or too low. A fault is set if the valve current is above a calibrated threshold_1 or below a calibrated threshold_2 for a calibrated number of failed tests.	(Current through the valve OR Current through the valve) AND Both for a number of failed tests	> 0.12 A < 0.085 A > 5	Ignition key AND Leakage Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks the voltage at the output Qx or at the gate to detect if the Valve-Driver-ASIC (Application Specific Integrated Circuit) output driver is not functioning correctly. All PWM (Pulse Width Modulation) signal positive edges are counted, and the low time duration is measured. The resulting value is read out via SPI (Serial Peripheral Interface). The high and low limits of the real PWM signal, which are set by the output driver, are calculated using the measured number of edges and the low time. The calculated high and low limits depend on the activation used. A fault is set if the current activation value is outside the calculated limits.	Measured actuation duty OR Measured actuation duty AND Both for a number of times	< Set Actuation Duty 20% > Set Actuation Duty + 20% > 5	Ignition key AND Resistor Measurement Test AND Leakage Test AND Valve Activation Register Test AND Silent Valve Driver Test	= On = Off = Off = Off = Off	0.05 [Sec]	Type A, 1 Trip

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks if the transistor gates are set properly. Qx is the command sent to the transistor gate which commands the valve motor. The Qx monitor compares the expected value of Qx (the calculated Qx-ON/OFF value which is dependent on the current set valve activation) with the actual value of Qx (Qx-ON/OFF from the valve-related SPI (Serial Peripheral Interface) register) in order to check for correct output driver functionality (gate on/off). A fault is set if the actual Qx value does not match the expected Qx value.	(Measured Gate On Actuation Duty) OR (Measured Gate Off Actuation Duty) AND For a number of failed tests	< 95 % > 5 % > 5	Ignition key AND Resistor Measurement Test AND Leakage Test AND Valve Activation Register Test AND Silent Valve Driver Test	= On = Off = Off = Off = Off	0.03 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the valve-related resistor value is out of range during the resistor measurement. This resistor value is calculated by taking the mean of the voltage through the resistor. A fault is set if the valve resistor value is too high or too low.	Comparison of calculated resistance and measured resistance OR Comparison of calculated resistance and measured resistance AND For a number of times	> 0.2 Of calculated resistance < -0.2 Of calculated resistance > 2	Ignition key AND Resistor Measurement Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if there is a short circuit between valves or a defective coil (due to Valve-Driver-ASIC (Application Specific Integrated Circuit) internal failure such as OpenLoad, UnderCurrent, OverCurrent, OverTemp, PGndLost or DxLost) during the Valve-Driver-ASIC Silent Valve Driver Test (SVDT). A fault is set if the ASIC current or temperature is below a calibrated threshold_1 or above a calibrated threshold_2, or if the High Side Switch Line Loss is below a calibrated threshold, for a calibrated number of failed tests.	(Current at ASIC) OR Current at ASIC OR Temperature at ASIC OR Temperature at ASIC OR High Side Switch Line Loss) AND For a number of times	< 0.05 A > 0.14 A < 25 °C > 140 °C < 0.005 A > 2	Ignition key AND Silent Valve Driver Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the internal valve-driver-ASIC (Application Specific Integrated Circuit) register matches the current actuation during the Valve Actuation Register Test (VART). A fault is set if the measured gate actuation duty during the test actuation exceeds a calibrated threshold.	Measured gate actuation during test actuation AND For a number of times	< 0.005 A > 2	Ignition key AND Valve Actuation Register Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					
Left Front Wheel Speed Sensor Circuit High	C0503	This monitoring strategy checks if there is a shortcut of WSS signal line to the battery.	Voltage of WSS signal line	> 12 V	System voltage AND Wheel speed sensor test completed	> 6.9 V = True	0.12 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.

Left Front Wheel Speed Sensor Intermittent/Erratic	C0504	This monitoring strategy checks if the High End Timer Transfer Unit (HETTU) buffer has overflowed. The HETTU buffer stores the time stamp of the wheel speed sensor outputs. This buffer has a status which tells whether the buffer can be used or not. A common PIC (Programmable Interrupt Controller) checks if the HETTU buffer is in the overflow state. In this case the buffer cannot be used because more edges occur on the wheel speed sensor channels than the buffer can store. A fault is set if the HETTU buffer is in the overflow state.	HET TU buffer state	= Overflow	Ignition key	= On	0.03 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					
Left Front Wheel Speed Sensor Range/Performance	C0501	This monitoring strategy checks if there is a defective wheel speed sensor. A fault is set if the speed of one wheel speed sensor is zero and the other wheel speed sensor speeds are above a calibrated threshold. Additionally the vehicle speed has to be above a calibrated threshold.	Speed of 1 wheel AND Speed of 3 wheels	= 0 mph > 0 mph	Ignition key AND Anti-Lock Braking intervention AND Vehicle speed AND System voltage AND Traction Control System Intervention	= On = False > 11.8 mph > 6.9 V = False	Immediately	Type A, 1 Trip
		This monitoring strategy checks if the wheel speed sensors is defective. It can be done after standstill, start-up monitoring at low speed, as well as while driving, start-up monitoring at high speed. The main principle of the start-up monitoring is to compare the speed signal from all four wheels to each other. A fault is set if the speed of the monitored wheel is below a calibrated threshold while the speed of the other wheels is above a calibrated threshold.	FR, RL, RR Wheel speed sensor AND FL Wheel speed sensor	> 7.45 mph = 0 mph	Check at low speed: Initial vehicle speed AND Anti-Lock Braking System intervention AND Traction control system intervention OR Check at high speed: Anti-Lock Braking System intervention AND Traction control system intervention	< 1.8 mph = False = False = False = False	Immediately	Type A, 1 Trip
		This monitoring strategy checks if the wheel speed signal is missing due to faulty wheel speed information. A fault is set if the wheel speed signal is missing for a calibrated duration (Δt) and the wheel deceleration is below a calibrated threshold.	No wheel speed signal for a time AND Wheel deceleration	> 0.08 Sec < 300 m/Sec ²	Ignition key AND Anti-Lock Braking intervention AND Vehicle speed AND System voltage AND Traction Control System Intervention AND Hydroplanning detected	= On = False > 26.84 mph > 6.9 V = False = False	0.08 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks if the wheel speed sensor PWM (Pulse Width Modulation) is functioning correctly. The wheel speed sensor returns a PWM signal with a frequency which is dependent on the vehicle velocity. The vehicle velocity is determined by counting every rising-edge of the signal periodically for a fixed time. A threshold is calculated with the two last rising-edges values to filter a missing edge value due to high deceleration. A fault is set if the number of rising-edges for the next cycle is lower than this calculated threshold. This monitor uses rough road detection to distinguish gaps in the edge cycle signal caused by real faults from those caused by driving on rough roads.	Number of rising-edge per cycle	< Threshold calculated by mean of the two latest edge cycle	Vehicle speed AND Vehicle speed AND Anti-lock Brake System Interventions AND System voltage AND Ignition key	> 6.21 mph < 37.36 mph = False > 6.9 V = On	Immediately	Type A, 1 Trip
		This monitoring strategy checks for a discontinuous wheel speed sensor signal, caused for example by impulse wheel vibration. The vibrations induce additional frequencies to the wheel speed sensor signal. The noise monitoring consists of three checks which lead to a noise fault. The first check evaluates the acceleration of each wheel speed sensor. The second check evaluates the amplitude of the noise events. A weighing factor is calculated according to the noise amplitude value. The third check evaluates the number of edges. A fault is set if two implausible high wheel speed accelerations occur within a calibrated duration, if the wheel speed acceleration is above a calibrated threshold, if the accumulation of the weighted noise amplitude is above a calibrated threshold during the actual driving cycle, or if the number of detected edges increases above a calibrated threshold within a calibrated period of time.	Wheel acceleration AND For a calibrated number of counts For time OR Wheel acceleration AND Accumulation of the weighted noise amplitude in current driving cycle OR Number of detected edges increases from To For time	> 9.81 m/Sec ² = 2 < 1.2 Sec > 500 m/Sec ² > 4 < 3 > 5 < 0.005 Sec	System voltage AND Ignition key	> 6.9 V = On	20 [Sec]	Type A, 1 Trip
		This monitoring strategy checks each wheel speed sensor signal for implausibly high wheel speed values. A fault is set if the wheel speed signal value is above a calibrated threshold for a calibrated duration.	Measured wheel speed For time	> 183.9 mph > 5.04 Sec	System voltage AND Ignition key	> 6.9 V = On	5.04 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks if the difference between the wheel speed sensor signals is within a range. A fault is set if the difference in wheel speed between a single wheel speed sensor and all other wheel speed sensors is above a calibrated threshold. If the vehicle speed is below a calibrated value, the malfunction threshold is a fixed value. If the vehicle speed is above this calibrated value, the malfunction threshold is proportional to the actual vehicle speed.	Difference between maximum and minimum wheel speed for vehicle speed OR Difference between maximum and minimum wheel speed for vehicle speed	> 3.7 mph < 12.4 mph > 6 % > 12.4 mph	Ignition key	= On	72 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the Wheel Speed Sensor (WSS) is mounted properly. This monitor continuously evaluates continuously the distance between the impulse wheel and the WSS. The WSS evaluates the magnetic flux density to detect an air gap failure. A fault is set if the air gap is too large which is indicated by a magnetic flux density below a calibrated threshold for a calibrated number of wheel rotations.	Magnetic flux density AND for a number of wheel rotations	< 0.0022 T > 5	Ignition key AND Wheel speed sensor test completed	= On = True	0.1 [Sec]	Type A, 1 Trip
		The monitoring checks if the stop pulse from each wheel speed sensor (WSS) is detected. The intelligent WSS signal provides additional information (air gap) encoded in bits 0-8. Each detection event is followed by a stop pulse. A fault is set if the Application Specific Integrated Circuit (ASIC) does not detect a stop pulse after some time and if there is no level change on the wheel speed sensor signal for some time.	No stop pulse detected For time OR No level change on signal For time	= True > 0.15 Sec = True > 3.5 Sec	Vehicle speed AND For time AND Wheel speed sensor test completed	< 1.12 mph > 10 Sec = True	3.5 [Sec]	Type A, 1 Trip
		This monitoring strategy checks the supply voltage of the corresponding wheel speed sensor. Each wheel speed sensor is switched on separately. A fault is set if the sensor supply voltage is below a calibrated threshold during the initial phase.	Sensor supply voltage of the respective wheel speed sensor	< 11 V	Ignition key AND System voltage AND	= On > 6.9 V	0.035 [Sec]	Type A, 1 Trip
		DTC Pass	Accelerate vehicle to at least 37.3 mph and hold the speed for at least 7s					
Left Rear Brake Pressure Sensor Circuit High Voltage	C0576	This monitoring strategy checks if there is a short circuit to the supply voltage in the pressure sensor line. To do this, it compares the signal line voltage with the supply voltage. The signal line maximum voltage should be lower than the supply voltage. A fault is set if there is no difference in voltage between the signal line and the supply line.	Signal line voltage	> 3.3 V	Ignition key	= On	0.1 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
Left Rear Brake Pressure Sensor Circuit Low Voltage	C0575	This monitoring strategy checks if there is a short circuit to ground in the pressure sensor line. To do this, it compares the signal line voltage with the ground voltage. The signal line minimum voltage should be higher than the ground voltage. A fault is set if there is no difference in voltage between the signal line and the ground.	Signal line voltage	< 0.3 V	Ignition key	= On	0.1 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					
Left Rear Brake Pressure Sensor Circuit Performance	C0578	This monitoring strategy checks if the offset compensation of the pressure sensor is out of range. The zero-point of the pressure sensor signal is adjusted to compensate for any signal drifts. The offset compensation is only performed when the brake pedal is not applied (corresponding to the pressure sensor zero point). A fault is set if the offset is outside a calibrated range.	Measured pressure OR Measured pressure	> 1500 KPa < -1500 KPa	System voltage AND Brake pedal is pushed AND Acceleration pedal is pushed AND Vehicle speed	> 6.9 V = False = True > 4.47 mph	Immediately	Type A, 1 Trip
		DTC Pass	Drive off, accelerate up to 37.2 mph and maintain this speed for at least 5s					
Left Rear Inlet Control	C0018	This monitoring strategy checks if the Valve-Driver-ASIC (Application Specific Integrated Circuit) FreeWheeling component is defective. A fault is set if the valve driver freewheeling cannot be switched on or off or if the trigger state is incorrect.	Freewheeling of valve driver cannot be switched OR Trigger state not correct	= True = True	Ignition key AND Resistor Measurement Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the valve actuation corresponds to the expected value. The basic valve monitoring is triggered by the coordinator via the control message. A fault is set if the valve actuation is different from the expected value for a calibrated period of time.	Valve actuation	≠ expected value	Ignition key AND Resistor Measurement Test	= On = Off	0.03 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the current through a valve is too high or too low. A fault is set if the valve current is above a calibrated threshold_1 or below a calibrated threshold_2 for a calibrated number of failed tests.	(Current through the valve OR Current through the valve) AND Both for a number of failed tests	> 0.12 A < 0.085 A > 5	Ignition key AND Leakage Test	= On = On	0.015 [Sec]	Type A, 1 Trip

		This monitoring strategy checks if the wheel speed signal is missing due to faulty wheel speed information. A fault is set if the wheel speed signal is missing for a calibrated duration (Δt) and the wheel deceleration is below a calibrated threshold.	No wheel speed signal for a time AND Wheel deceleration	> 0.08 Sec < 300 m/Sec ²	Ignition key AND Anti-Lock Braking intervention AND Vehicle speed AND System voltage AND Traction Control System Intervention AND Hydroplanning detected	= On = False > 26.84 mph > 6.9 V = False = False	0.08 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the wheel speed sensor PWM (Pulse Width Modulation) is functioning correctly. The wheel speed sensor returns a PWM signal with a frequency which is dependent on the vehicle velocity. The vehicle velocity is determined by counting every rising-edge of the signal periodically for a fixed time. A threshold is calculated with the two last rising-edges values to filter a missing edge value due to high deceleration. A fault is set if the number of rising-edges for the next cycle is lower than this calculated threshold. This monitor uses rough road detection to distinguish gaps in the edge cycle signal caused by real faults from those caused by driving on rough roads.	Number of rising-edge per cycle	< Threshold calculated by mean of the two latest edge cycle	Vehicle speed AND Vehicle speed AND Anti-lock Brake System Interventions AND System voltage AND Ignition key	> 6.21 mph < 37.36 mph = False > 6.9 V = On	Immediately	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks for a discontinuous wheel speed sensor signal, caused for example by impulse wheel vibration. The vibrations induce additional frequencies to the wheel speed sensor signal. The noise monitoring consists of three checks which lead to a noise fault. The first check evaluates the acceleration of each wheel speed sensor. The second check evaluates the amplitude of the noise events. A weighing factor is calculated according to the noise amplitude value. The third check evaluates the number of edges. A fault is set if two implausible high wheel speed accelerations occur within a calibrated duration, if the wheel speed acceleration is above a calibrated threshold, if the accumulation of the weighted noise amplitude is above a calibrated threshold during the actual driving cycle, or if the number of detected edges increases above a calibrated threshold within a calibrated period of time.	Wheel acceleration AND For a calibrated number of counts For time OR Wheel acceleration AND Accumulation of the weighted noise amplitude in current driving cycle OR Number of detected edges increases from To For time	> 9.81 m/Sec ² = 2 < 1.2 Sec > 500 m/Sec ² > 4 < 3 > 5 < 0.005 Sec	System voltage AND Ignition key	> 6.9 V = On	20 [Sec]	Type A, 1 Trip
		This monitoring strategy checks each wheel speed sensor signal for implausibly high wheel speed values. A fault is set if the wheel speed signal value is above a calibrated threshold for a calibrated duration.	Measured wheel speed For time	> 183.9 mph > 5.04 Sec	System voltage AND Ignition key	> 6.9 V = On	5.04 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the difference between the wheel speed sensor signals is within a range. A fault is set if the difference in wheel speed between a single wheel speed sensor and all other wheel speed sensors is above a calibrated threshold. If the vehicle speed is below a calibrated value, the malfunction threshold is a fixed value. If the vehicle speed is above this calibrated value, the malfunction threshold is proportional to the actual vehicle speed.	Difference between maximum and minimum wheel speed for vehicle speed OR Difference between maximum and minimum wheel speed for vehicle speed	> 3.7 mph < 12.4 mph > 6 % > 12.4 mph	Ignition key	= On	72 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the Wheel Speed Sensor (WSS) is mounted properly. This monitor continuously evaluates continuously the distance between the impulse wheel and the WSS. The WSS evaluates the magnetic flux density to detect an air gap failure. A fault is set if the air gap is too large which is indicated by a magnetic flux density below a calibrated threshold for a calibrated number of wheel rotations.	Magnetic flux density AND for a number of wheel rotations	< 0.0022 T > 4	Ignition key AND Wheel speed sensor test completed	= On = True	0.1 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
Powertrain Control Module Indicated Requested Torque	C10EA	This monitoring strategy checks if the electric power train response(actual regenerative brake torque) does not correspond to the target regenerative brake torque, or if the signal transmission from the power train ECU (Electronic Control Unit) to the brake system ECU failed. A Fault is set if the electric power train has applied regenerative braking without the request of the brake system ECU.	(Actual regenerative brake torque signal value - Target regenerative brake torque)	> 700 Nm	Full system mode AND Regenerative braking OR Unintended regenerative braking was executed	= On = On = True	0.8 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the electric power train response(actual regenerative brake torque) does not correspond to the target regenerative brake torque, or if the signal transmission from the power train ECU (Electronic Control Unit) to the brake system ECU failed. In case of a braking situation, the ECU calculates the proportion of regenerative brake torque to non-regenerative brake torque. Then the regenerative brake torque must reach the regenerative brake torque request from the ECU. A fault is set if the actual regenerative brake torque provided by the electric power train ECU deviates by more than a certain amount from the target regenerative brake torque requested by the brake system.	(Actual regenerative brake torque signal value - Target regenerative brake torque)	> 700 Nm	Full system mode AND Regenerative braking is being requested OR Response of electricpowertrain does not match request	= On = True = True	0.8 [Sec]	Type A, 1 Trip
		DTC Pass	Turn on ignition. 1. Accelerate moderate to 24.8 mph and Brake to standstill with low deceleration (brake time about 15sec), 2. Accelerate moderate to 24.8 mph and Brake to standstill with middle deceleration (brake time about 7.5sec), 3. Accelerate moderate to 24.8 mph and Brake to standstill with low deceleration (brake time about 15sec), 4. Accelerate moderate to 24.8 mph and Brake to standstill with middle deceleration (brake					
Pump Motor Relay Circuit High	C106B	This monitoring strategy checks if the hydraulic pump has an electrical fault. When the pump is not running. The monitor checks the voltage difference between MRD and MRS voltage and the current across the motor while the pump is activated, A fault is set if the voltage is greater than a calibrated threshold.	During motor actuation. Absolute (Hydraulic pump motor relay drain voltage - hydraulic pump motor relay source voltage)	> 2 V	Ignition key AND Hydraulic pump motor AND System voltage	= On = On > 6.9 V	0.06 [Sec]	Type A, 1 Trip
		DTC Pass	Drive off, accelerate up to 37.2 mph and maintain this speed for at least 5s					

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
Pump Motor Relay Circuit Low	C106A	This monitoring strategy checks if there is an overload situation on the motor relay during actuation. A fault is set if the hydraulic pump motor relay cannot be switched-through completely. This happens when the voltage between the Motor Relay Drain (MRD) and the Motor Relay Source (MRS) is greater than a calibrated threshold.	During motor actuation. Absolute (Hydraulic pump motor relay drain voltage - hydraulic pump motor relay source voltage)	> 0.5 V	Ignition key AND Hydraulic pump motor AND System voltage	= On = On > 6.9 V	0.06 [Sec]	Type A, 1 Trip
		DTC Pass	Drive off, accelerate up to 37.2 mph and maintain this speed for at least 5s					
Regenerative Braking Axle Torque Achieved Message Counter Incorrect	C1287	This monitoring strategy checks whether the message is still alive or not. The network driver has to send and receive all network messages. At the same time it has to check that the messages are correct (length, checksum, alive-counter, reception timeout). With each newly sent message a counter is incremented within the sending ECU. the counter value is enclosed within the message. The receiving control unit checks whether counters have been incremented. A fault is set if the counter value is not incremented.	Message 0x230 on Bus E counter halted	= True	System voltage AND System voltage AND Bus Off Fault Active ECU is sending/receiving on CAN AND ECU Power Mode transition diagnostic enable delay timer	> 7.5 V < 16 V = False = True ≥ 5 Sec	0.25 [Sec]	Type B, 2 Trips
		This monitoring strategy checks if the message checksum is correct. The network driver sends and receives all network messages. It also checks if the messages are correct (length, checksum, alive-counter, reception timeout). With each newly sent message a checksum is calculated within the sending ECU. The value of the checksum is enclosed within the message. The receiving control unit calculates the checksum again and compares it with the sent one. A fault is set if the received checksum is different from the calculated checksum.	Checksum of 0x230 on Bus E not correct	= True	System voltage AND System voltage AND Bus Off Fault Active ECU is sending/receiving on CAN AND ECU Power Mode transition diagnostic enable delay timer	> 7.5 V < 16 V = False = True ≥ 5 Sec	0.25 [Sec]	Type B, 2 Trips
Right Front Inlet Control	C0014	This monitoring strategy checks if the Valve-Driver-ASIC (Application Specific Integrated Circuit) FreeWheeling component is defective. A fault is set if the valve driver freewheeling cannot be switched on or off or if the trigger state is incorrect.	Freewheeling of valve driver cannot be switched OR Trigger state not correct	= True = True	Ignition key AND Resistor Measurement Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the valve actuation corresponds to the expected value. The basic valve monitoring is triggered by the coordinator via the control message. A fault is set if the valve actuation is different from the expected value for a calibrated period of time.	Valve actuation	≠ expected value	Ignition key AND Resistor Measurement Test	= On = Off	0.03 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks if the current through a valve is too high or too low. A fault is set if the valve current is above a calibrated threshold_1 or below a calibrated threshold_2 for a calibrated number of failed tests.	(Current through the valve OR Current through the valve) AND Both for a number of failed tests	> 0.12 A < 0.085 A > 5	Ignition key AND Leakage Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks the voltage at the output Qx or at the gate to detect if the Valve-Driver-ASIC (Application Specific Integrated Circuit) output driver is not functioning correctly. All PWM (Pulse Width Modulation) signal positive edges are counted, and the low time duration is measured. The resulting value is read out via SPI (Serial Peripheral Interface). The high and low limits of the real PWM signal, which are set by the output driver, are calculated using the measured number of edges and the low time. The calculated high and low limits depend on the activation used. A fault is set if the current activation value is outside the calculated limits.	Measured actuation duty OR Measured actuation duty AND Both for a number of times	< Set Actuation Duty 20% > Set Actuation Duty + 20% > 5	Ignition key AND Resistor Measurement Test AND Leakage Test AND Valve Activation Register Test AND Silent Valve Driver Test	= On = Off = Off = Off = Off	0.05 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the transistor gates are set properly. Qx is the command sent to the transistor gate which commands the valve motor. The Qx monitor compares the expected value of Qx (the calculated Qx-ON/OFF value which is dependent on the current set valve activation) with the actual value of Qx (Qx-ON/OFF from the valve-related SPI (Serial Peripheral Interface) register) in order to check for correct output driver functionality (gate on/off). A fault is set if the actual Qx value does not match the expected Qx value.	(Measured Gate On Actuation Duty OR Measured Gate Off Actuation Duty) AND For a number of failed tests	< 95 % > 5 % > 5	Ignition key AND Resistor Measurement Test AND Leakage Test AND Valve Activation Register Test AND Silent Valve Driver Test	= On = Off = Off = Off = Off	0.03 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the valve-related resistor value is out of range during the resistor measurement. This resistor value is calculated by taking the mean of the voltage through the resistor. A fault is set if the valve resistor value is too high or too low.	Comparison of calculated resistance and measured resistance OR Comparison of calculated resistance and measured resistance AND For a number of times	> 0.2 Of calculated resistance < -0.2 Of calculated resistance > 2	Ignition key AND Resistor Measurement Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if there is a short circuit between valves or a defective coil (due to Valve-Driver-ASIC (Application Specific Integrated Circuit) internal failure such as OpenLoad, UnderCurrent, OverCurrent, OverTemp, PGndLost or DxLost) during the Valve-Driver-ASIC Silent Valve Driver Test (SVDT). A fault is set if the ASIC current or temperature is below a calibrated threshold_1 or above a calibrated threshold_2, or if the High Side Switch Line Loss is below a calibrated threshold, for a calibrated number of failed tests.	(Current at ASIC OR Current at ASIC OR Temperature at ASIC OR Temperature at ASIC OR High Side Switch Line Loss) AND For a number of times	< 0.05 A > 0.14 A < 25 °C > 140 °C < 0.005 A > 2	Ignition key AND Silent Valve Driver Test	= On = On	0.015 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks if the internal valve-driver-ASIC (Application Specific Integrated Circuit) register matches the current actuation during the Valve Actuation Register Test (VART). A fault is set if the measured gate actuation duty during the test actuation exceeds a calibrated threshold.	Measured gate actuation during test actuation AND For a number of times	< 0.005 A > 2	Ignition key AND Valve Activation Register Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					
Right Front Outlet Control	C0015	This monitoring strategy checks if the valve actuation corresponds to the expected value. The basic valve monitoring is triggered by the coordinator via the control message. A fault is set if the valve actuation is different from the expected value for a calibrated period of time.	Valve actuation	≠ expected value	Ignition key AND Resistor Measurement Test	= On = Off	0.03 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the current through a valve is too high or too low. A fault is set if the valve current is above a calibrated threshold_1 or below a calibrated threshold_2 for a calibrated number of failed tests. This resistor value is calculated by taking the mean of the voltage through the resistor. A fault is set if the valve resistor value is too high or too low.	Comparison of calculated resistance and measured resistance OR Comparison of calculated resistance and measured resistance AND For a number of times	> 0.2 Of calculated resistance < -0.2 Of calculated resistance > 2	Ignition key AND Resistor Measurement Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if there is a short circuit between valves or a defective coil (due to Valve-Driver-ASIC (Application Specific Integrated Circuit) internal failure such as OpenLoad, UnderCurrent, OverCurrent, OverTemp, PGndLost or DxLost) during the Valve-Driver-ASIC Silent Valve Driver Test (SVDT). A fault is set if the ASIC current or temperature is below a calibrated threshold_1 or above a calibrated threshold_2, or if the High Side Switch Line Loss is below a calibrated threshold, for a calibrated number of failed tests.	(Current at ASIC OR Current at ASIC OR Temperature at ASIC OR Temperature at ASIC OR High Side Switch Line Loss) AND For a number of times	< 0.05 A > 0.14 A < 25 °C > 140 °C < 0.005 A > 2	Ignition key AND Silent Valve Driver Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the internal valve-driver-ASIC (Application Specific Integrated Circuit) register matches the current actuation during the Valve Actuation Register Test (VART). A fault is set if the measured gate actuation duty during the test actuation exceeds a calibrated threshold.	Measured gate actuation during test actuation AND For a number of times	< 0.005 A > 2	Ignition key AND Valve Activation Register Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					
Right Front Wheel Speed Sensor Circuit High	C0509	This monitoring strategy checks if there is a shortcut of WSS signal line to the battery.	Voltage of WSS signal line	> 12 V	System voltage AND Wheel speed sensor test completed	> 6.9 V = True	0.12 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					
Right Front Wheel Speed Sensor Circuit Low	C0508	This monitoring strategy checks for a line failure on the front right wheel speed sensor. In the line monitor, if a failure is detected, ASIC registers are evaluated and the corresponding failures are set. A fault is set if no precise line failure can be determine.	A failure is detected AND Wheel Speed Sensor Current Supply Line Monitoring AND Wheel Speed Sensor Voltage Monitoring AND Wheel Speed Sensor Current Signal Line Monitoring	= True = False = False = False	System voltage AND Wheel speed sensor test completed	> 6.9 V = True	0.12 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if there is an electrical failure in the wheel speed sensors. The sensor current and the sensor voltage are monitored by a comparator circuit in an ASIC (Application Specific Integrated Circuit). A fault is set if the current at the supply line is below a calibrated threshold.	Sensor current at supply line	< 0.16 A	System voltage AND Wheel speed sensor test completed	> 6.9 V = True	0.12 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
Right Front Wheel Speed Sensor Circuit/Open	C0506	This monitoring strategy checks if there is an electrical failure in the wheel speed sensors. The sensor current and the sensor voltage are monitored by a comparator circuit in an ASIC (Application Specific Integrated Circuit). A fault is set if the sensor current at the signal line is below a calibrated threshold.	Sensor current at the signal line	< 0.0038 A	System voltage AND Wheel speed sensor test completed	> 6.9 V = True	0.12 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					
Right Front Wheel Speed Sensor Incorrect Component Installed	C0556	This monitoring strategy checks if the Wheel Speed Sensor (WSS) is mounted at the correct wheel. Since the WSS signals differ for different WSS sensor types, the EBCU (Electronic Brake Control Unit) is able to recognize incorrect WSS placement by evaluating the signal. The intelligent WSS signal provides additional information (air gap) encoded in bits 0-8. Each detection event is followed by a stop pulse. A fault is set if the stop pulse is missing for a calibrated period of time.	No stop pulse according to wheel speed sensor protocol detected	= True	Wheel speed sensor test completed AND Ignition key	= True = On	3 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					
Right Front Wheel Speed Sensor Intermittent/Erratic	C050A	This monitoring strategy checks if the High End Timer Transfer Unit (HETTU) buffer has overflowed. The HETTU buffer stores the time stamp of the wheel speed sensor outputs. This buffer has a status which tells whether the buffer can be used or not. A common PIC (Programmable Interrupt Controller) checks if the HETTU buffer is in the overflow state. In this case the buffer cannot be used because more edges occur on the wheel speed sensor channels than the buffer can store. A fault is set if the HETTU buffer is in the overflow state.	HET TU buffer state	= Overflow	Ignition key	= On	0.03 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					
Right Front Wheel Speed Sensor Range/Performance	C0507	This monitoring strategy checks if there is a defective wheel speed sensor. A fault is set if the speed of one wheel speed sensor is zero and the other wheel speed sensor values are above a calibrated threshold. Additionally the vehicle speed has to be above a calibrated threshold.	Speed of 1 wheel AND Speed of 3 wheels	= 0 mph > 0 mph	Ignition key AND Anti-Lock Braking intervention AND Vehicle speed AND System voltage AND Traction Control System Intervention	= On = False > 11.8 mph > 6.9 V = False	Immediately	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks if the wheel speed sensors is defective. It can be done after standstill, start-up monitoring at low speed, as well as while driving, start-up monitoring at high speed. The main principle of the start-up monitoring is to compare the speed signal from all four wheels to each other. A fault is set if the speed of the monitored wheel is below a calibrated threshold while the speed of the other wheels is above a calibrated threshold.	FL, RL, RR Wheel speed sensor AND FR Wheel speed sensor	> 7.45 mph = 0 mph	Check at low speed: Initial vehicle speed AND Anti-Lock Braking System intervention AND Traction control system intervention OR Check at high speed: Anti-Lock Braking System intervention AND Traction control system intervention	< 1.8 mph = False = False = False = False	Immediately	Type A, 1 Trip
		This monitoring strategy checks if the wheel speed signal is missing due to faulty wheel speed information. A fault is set if the wheel speed signal is missing for a calibrated duration (Δt) and the wheel deceleration is below a calibrated threshold.	No wheel speed signal for a time AND Wheel deceleration	> 0.08 Sec < 300 m/Sec ²	Ignition key AND Anti-Lock Braking intervention AND Vehicle speed AND System voltage AND Traction Control System Intervention AND Hydroplanning detected	= On = False > 26.84 mph > 6.9 V = False = False	0.08 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the wheel speed sensor PWM (Pulse Width Modulation) is functioning correctly. The wheel speed sensor returns a PWM signal with a frequency which is dependent on the vehicle velocity. The vehicle velocity is determined by counting every rising-edge of the signal periodically for a fixed time. A threshold is calculated with the two last rising-edges values to filter a missing edge value due to high deceleration. A fault is set if the number of rising-edges for the next cycle is lower than this calculated threshold. This monitor uses rough road detection to distinguish gaps in the edge cycle signal caused by real faults from those caused by driving on rough roads.	Number of rising-edge per cycle	< Threshold calculated by mean of the two latest edge cycle	Vehicle speed AND Vehicle speed AND Anti-lock Brake System Interventions AND System voltage AND Ignition key	> 6.21 mph < 37.36 mph = False > 6.9 V = On	Immediately	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks for a discontinuous wheel speed sensor signal, caused for example by impulse wheel vibration. The vibrations induce additional frequencies to the wheel speed sensor signal. The noise monitoring consists of three checks which lead to a noise fault. The first check evaluates the acceleration of each wheel speed sensor. The second check evaluates the amplitude of the noise events. A weighing factor is calculated according to the noise amplitude value. The third check evaluates the number of edges. A fault is set if two implausible high wheel speed accelerations occur within a calibrated duration, if the wheel speed acceleration is above a calibrated threshold, if the accumulation of the weighted noise amplitude is above a calibrated threshold during the actual driving cycle, or if the number of detected edges increases above a calibrated threshold within a calibrated period of time.	Wheel acceleration AND For a calibrated number of counts For time OR Wheel acceleration AND Accumulation of the weighted noise amplitude in current driving cycle OR Number of detected edges increases from To For time	> 9.81 m/Sec ² = 2 < 1.2 Sec > 500 m/Sec ² > 4 < 3 > 5 < 0.005 Sec	System voltage AND Ignition key	> 6.9 V = On	20 [Sec]	Type A, 1 Trip
		This monitoring strategy checks each wheel speed sensor signal for implausibly high wheel speed values. A fault is set if the wheel speed signal value is above a calibrated threshold for a calibrated duration.	Measured wheel speed For time	> 183.9 mph > 5.04 Sec	System voltage AND Ignition key	> 6.9 V = On	5.04 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the difference between the wheel speed sensor signals is within a range. A fault is set if the difference in wheel speed between a single wheel speed sensor and all other wheel speed sensors is above a calibrated threshold. If the vehicle speed is below a calibrated value, the malfunction threshold is a fixed value. If the vehicle speed is above this calibrated value, the malfunction threshold is proportional to the actual vehicle speed.	Difference between maximum and minimum wheel speed for vehicle speed OR Difference between maximum and minimum wheel speed for vehicle speed	> 3.7 mph < 12.4 mph > 6 % > 12.4 mph	Ignition key	= On	72 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the Wheel Speed Sensor (WSS) is mounted properly. This monitor continuously evaluates continuously the distance between the impulse wheel and the WSS. The WSS evaluates the magnetic flux density to detect an air gap failure. A fault is set if the air gap is too large which is indicated by a magnetic flux density below a calibrated threshold for a calibrated number of wheel rotations.	Magnetic flux density AND for a number of wheel rotations	< 0.0022 T > 4	Ignition key AND Wheel speed sensor test completed	= On = True	0.1 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		The monitoring checks if the stop pulse from each wheel speed sensor (WSS) is detected. The intelligent WSS signal provides additional information (air gap) encoded in bits 0-8. Each detection event is followed by a stop pulse. A fault is set if the Application Specific Integrated Circuit (ASIC) does not detect a stop pulse after some time and if there is no level change on the wheel speed sensor signal for some time.	No stop pulse detected For time OR No level change on signal For time	= True > 0.15 Sec = True > 3.5 Sec	Vehicle speed AND For time AND Wheel speed sensor test completed	< 1.12 mph > 10 Sec = True	3.5 [Sec]	Type A, 1 Trip
		This monitoring strategy checks the supply voltage of the corresponding wheel speed sensor. Each wheel speed sensor is switched on separately. A fault is set if the sensor supply voltage is below a calibrated threshold during the initial phase.	Sensor supply voltage of the respective wheel speed sensor	< 11 V	Ignition key AND System voltage AND	= On > 6.9 V	0.035 [Sec]	Type A, 1 Trip
		DTC Pass	Accelerate vehicle to at least 37.3 mph and hold the speed for at least 7s					
Right Rear Inlet Control	C001C	This monitoring strategy checks if the Valve-Driver-ASIC (Application Specific Integrated Circuit) FreeWheeling component is defective. A fault is set if the valve driver freewheeling cannot be switched on or off or if the trigger state is incorrect.	Freewheeling of valve driver cannot be switched OR Trigger state not correct	= True = True	Ignition key AND Resistor Measurement Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the valve actuation corresponds to the expected value. The basic valve monitoring is triggered by the coordinator via the control message. A fault is set if the valve actuation is different from the expected value for a calibrated period of time.	Valve actuation	≠ expected value	Ignition key AND Resistor Measurement Test	= On = Off	0.03 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the current through a valve is too high or too low. A fault is set if the valve current is above a calibrated threshold_1 or below a calibrated threshold_2 for a calibrated number of failed tests.	(Current through the valve OR Current through the valve) AND Both for a number of failed tests	> 0.12 A < 0.085 A > 5	Ignition key AND Leakage Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks the voltage at the output Qx or at the gate to detect if the Valve-Driver-ASIC (Application Specific Integrated Circuit) output driver is not functioning correctly. All PWM (Pulse Width Modulation) signal positive edges are counted, and the low time duration is measured. The resulting value is read out via SPI (Serial Peripheral Interface). The high and low limits of the real PWM signal, which are set by the output driver, are calculated using the measured number of edges and the low time. The calculated high and low limits depend on the activation used. A fault is set if the current activation value is outside the calculated limits.	Measured actuation duty OR Measured actuation duty AND Both for a number of times	< Set Actuation Duty 20% > Set Actuation Duty + 20% > 5	Ignition key AND Resistor Measurement Test AND Leakage Test AND Valve Activation Register Test AND Silent Valve Driver Test	= On = Off = Off = Off = Off	0.05 [Sec]	Type A, 1 Trip

		This monitoring strategy checks if the Wheel Speed Sensor (WSS) is mounted properly. This monitor continuously evaluates continuously the distance between the impulse wheel and the WSS. The WSS evaluates the magnetic flux density to detect an air gap failure. A fault is set if the air gap is too large which is indicated by a magnetic flux density below a calibrated threshold for a calibrated number of wheel rotations.	Magnetic flux density AND for a number of wheel rotations	< 0.0022 T > 4	Ignition key AND Wheel speed sensor test completed	= On = True	0.1 [Sec]	Type A, 1 Trip
		The monitoring checks if the stop pulse from the Wheel Speed Sensor of each wheel is detected. The intelligent WSS signal provides additional information (air gap) encoded in bits 0-8. Each detection event is followed by a stop pulse. A fault is set if the Application Specific Integrated Circuit (ASIC) does not detect a stop pulse after some time and if there is no level change on the wheel speed sensor signal for some time.	No stop pulse detected For time OR No level change on signal For time	= True > 0.15 Sec = True > 3.5 Sec	Vehicle speed AND For time AND Wheel speed sensor test completed	< 1.12 mph > 10 Sec = True	3.5 [Sec]	Type A, 1 Trip
		This monitoring strategy checks the supply voltage of the corresponding wheel speed sensor. Each wheel speed sensor is switched on separately. A fault is set if the sensor supply voltage is below a calibrated threshold during the initial phase.	Sensor supply voltage of the respective wheel speed sensor	< 11 V	Ignition key AND System voltage AND	= On > 6.9 V	0.035 [Sec]	Type A, 1 Trip
		DTC Pass	Accelerate vehicle to at least 37.3 mph and hold the speed for at least 7s					
Software Incompatibility With Brake System Control Module "B" - Generic	U031C	This monitoring checks if there is a mismatch between the iBooster compatibility index signal and the current configuration in ESP. A fault is set if the signal "Ebrake Assist Compatibility Index" is received with an incompatible index value.	"Ebrake Assist Compatibility Index" is received with an incompatible index value	= True	System voltage AND System voltage AND Bus Off Fault Active ECU is sending/receiving on CAN AND ECU Power Mode transition diagnostic enable delay timer	> 7.5 V < 16 V = False = True ≥ 5 Sec	0.1 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
System Voltage	P0560	This monitoring strategy checks if the resistance in the internal valve supply voltage (UBVR) line is faulty or too high by checking the voltage. A supply line failure is detected during the Valve Activation Supply Line Test (VAST). A fault is set if the ratio of internal valve supply voltage to system voltage is above a calibrated threshold.	Internal valve supply voltage / System voltage	> 0.25	Vehicle speed AND Ignition key AND System voltage	> 9.32 mph = On > 6.9 V	0.015 [Sec]	Type A, 1 Trip
		DTC Pass	Accelerate vehicle to at least 18.6 mph and hold the speed for at least 20s					
System Voltage High	P0563	This monitoring checks the system supply voltage. A fault is set if the voltage is greater than a calibrated threshold.	CAN supply voltage	> 17 V	Ignition key	= On	0.09 [Sec]	Type B, 2 Trips
		This monitoring strategy checks if the motor relay is in an overvoltage situation. This protects the hydraulic pump against overvoltage. A fault is set if the supply voltage is above a calibrated threshold.	Voltage at motor relay	> 17 V	System voltage AND Ignition key	> 6.9 V = On	1 [Sec]	Type B, 2 Trips
		DTC Pass	Turn ignition on and wait for at least 30sec without braking.					
System Voltage Low	P0562	This monitoring strategy checks if Ecu supply voltage is out of range low, which means below the HW (Hardware) switch off threshold but the HW is not switched off for the particular time. A fault is set if the Ecu supply voltage is below a threshold.	Ecu supply voltage	< 4.9 V	Ignition key	= On	0.2 [Sec]	Special Type C
		This monitoring strategy checks if the hydraulic components are in a hard undervoltage situation. A fault is set if the hydraulic supply voltage drops below a calibrated threshold.	Hydraulic supply voltage	< 6.9 V	Ignition key	= On	1 [Sec]	Special Type C
		This monitoring strategy checks the lower functional voltage range of the hydraulic components to ensure full system functionality. A fault is set if the valve voltage or the motor voltage drops below a calibrated threshold.	Valve relay voltage	< 9.4 V	Ignition key	= On	1 [Sec]	Special Type C
		This monitoring checks the system supply voltage. A fault is set if the voltage is less than a calibrated threshold.	CAN supply voltage	< 7.5 V	Ignition key	= On	0.09 [Sec]	Special Type C
		This monitoring strategy checks if there is an undervoltage of the ASIC internal Sigma Delta Modulator (SDM). This monitoring works through an ASIC which measures an undervoltage and indicates an insufficient supply voltage of sigma delta converter to the microcontroller with SPI (Serial Peripheral Interface) protocol. A fault is set if the SDM (Sigma Delta Modulator) supply voltage is below a calibrated threshold.	Sigma delta converter supply voltage	< 5.5 V	Ignition key	= On	0.01 [Sec]	Special Type C

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		DTC Pass	Turn ignition on and wait for at least 30sec without braking.					
Traction Control Front Isolation Solenoid Valve Circuit	C1590	This monitoring strategy checks if the Valve-Driver-ASIC (Application Specific Integrated Circuit) FreeWheeling component is defective. A fault is set if the valve driver freewheeling cannot be switched on or off or if the trigger state is incorrect.	Freewheeling of valve driver cannot be switched OR Trigger state not correct	= True = True	Ignition key AND Resistor Measurement Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the valve actuation corresponds to the expected value. The basic valve monitoring is triggered by the coordinator via the control message. A fault is set if the valve actuation is different from the expected value for a calibrated period of time.	Valve actuation	≠ expected value	Ignition key AND Resistor Measurement Test	= On = Off	0.03 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the current through a valve is too high or too low. A fault is set if the valve current is above a calibrated threshold_1 or below a calibrated threshold_2 for a calibrated number of failed tests.	(Current through the valve OR Current through the valve) AND Both for a number of failed tests	> 0.12 A < 0.085 A > 5	Ignition key AND Leakage Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks the voltage at the output Qx or at the gate to detect if the Valve-Driver-ASIC (Application Specific Integrated Circuit) output driver is not functioning correctly. All PWM (Pulse Width Modulation) signal positive edges are counted, and the low time duration is measured. The resulting value is read out via SPI (Serial Peripheral Interface). The high and low limits of the real PWM signal, which are set by the output driver, are calculated using the measured number of edges and the low time. The calculated high and low limits depend on the activation used. A fault is set if the current activation value is outside the calculated limits.	Measured actuation duty OR Measured actuation duty AND Both for a number of times	< Set Actuation Duty 20% > Set Actuation Duty + 20% > 5	Ignition key AND Resistor Measurement Test AND Leakage Test AND Valve Activation Register Test AND Silent Valve Driver Test	= On = Off = Off = Off = Off	0.05 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the transistor gates are set properly. Qx is the command sent to the transistor gate which commands the valve motor. The Qx monitor compares the expected value of Qx (the calculated Qx-ON/OFF value which is dependent on the current set valve activation) with the actual value of Qx (Qx-ON/OFF from the valve-related SPI (Serial Peripheral Interface) register) in order to check for correct output driver functionality (gate on/off). A fault is set if the actual Qx value does not match the expected Qx value.	(Measured Gate On Actuation Duty OR Measured Gate Off Actuation Duty) AND For a number of failed tests	< 95 % > 5 % > 5	Ignition key AND Resistor Measurement Test AND Leakage Test AND Valve Activation Register Test AND Silent Valve Driver Test	= On = Off = Off = Off = Off	0.03 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring strategy checks if the valve-related resistor value is out of range during the resistor measurement. This resistor value is calculated by taking the mean of the voltage through the resistor. A fault is set if the valve resistor value is too high or too low.	Comparison of calculated resistance and measured resistance OR Comparison of calculated resistance and measured resistance AND For a number of times	> 0.2 Of calculated resistance < -0.2 Of calculated resistance > 2	Ignition key AND Resistor Measurement Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if there is a short circuit between valves or a defective coil during the Valve-Driver-ASIC (Application Specific Integrated Circuit) internal failure such as OpenLoad, UnderCurrent, OverCurrent, OverTemp, PGndLost or DxLost) during the Valve-Driver-ASIC Silent Valve Driver Test (SVDT). A fault is set if the ASIC current or temperature is below a calibrated threshold_1 or above a calibrated threshold_2 for a calibrated number of failed tests. A fault is also set if the High Side Switch Line Loss is below a calibrated threshold.	(Current at ASIC OR Current at ASIC OR Temperature at ASIC OR Temperature at ASIC OR High Side Switch Line Loss) AND For a number of times	< 0.05 A > 0.14 A < 25 °C > 140 °C < 0.005 A > 2	Ignition key AND Silent Valve Driver Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the internal valve-driver-ASIC (Application Specific Integrated Circuit) register matches the current actuation during the Valve Actuation Register Test (VART). A fault is set if the measured gate actuation duty during the test actuation exceeds a calibrated threshold.	Measured gate actuation during test actuation AND For a number of times	< 0.005 A > 2	Ignition key AND Valve Activation Register Test	= On = On	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks the drift effects in the hardware current controller. The current regulator inside the valve driver returns current feedback for each activated valve. A fault is set if the difference between an activated valve's measured activation (current regulator feedback) and activation calculated from the previous resistor measurement values (current pattern) is above a calibrated threshold.	Comparison of calculated current with measured current AND Comparison of calculated current with measured current	> 20 % < -20 %	Ignition key AND Vehicle speed AND Previous successful resistor measurement AND Valve Drift Check	= On > 9.32 mph = True = active	0.025 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec. Accelerate vehicle to at least 18.6 mph and hold the speed for at least 20s		d			
Traction Control Front Prime Solenoid Valve Circuit	C158F	This monitoring strategy checks if the Valve-Driver-ASIC (Application Specific Integrated Circuit) FreeWheeling component is defective. A fault is set if the valve driver freewheeling cannot be switched on or off or if the trigger state is incorrect.	Freewheeling of valve driver cannot be switched OR Trigger state not correct	= True = True	Ignition key AND Resistor Measurement Test	= On = On	0.015 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
Valve Relay Circuit	C106D	This monitoring strategy checks if the valve relay is correctly activated by comparing the valve relay output voltage (UVR) to the supply voltage (UBVR). The valve relay is typically switched on or off during the Fail-Safe Logic Test (FSLT) to detect if the valve relay has not switched on successfully. A fault is set if the resulting ratio of UVR to UBVR is below a calibrated threshold.	Valve relay output voltage / Valve relay supply voltage	< 0.7	Ignition key AND Fail-Safe Logic Test	= On = On	0.45 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the valve relay is correctly activated by comparing the valve relay output voltage (UVR) to the valve relay supply voltage (UBVR). A fault is set if the resulting ratio is below a calibrated threshold which indicates that the valve relay has not switched on successfully.	Valve relay output voltage / Valve relay supply voltage	< 0.7	Ignition key AND Fail-Safe Logic Test is finished AND Valve relay output voltage mid level supply	= On = True = On	0.025 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					
Valve Relay Circuit High	C1070	This monitoring strategy checks if the valve relay output voltage (UVR) voltage is shorted to the valve relay supply voltage (UBVR), if the valve relay is stuck, or if a missing valve relay watchdog is not detected. Two separate tests check if the valve relay can be switched off. The first test checks if a missing Built In Self Test (BIST) watchdog leads to a switched off valve relay because the hydraulic state "off". The second test checks if the valve-relay-safety-switch detects a missing valve-relay-watchdog, which must lead to a switched off valve relay. During checks, the Fail-Safe Logic Test (FSLT) derives the valve relay status by comparing the valve relay supply voltage to the valve relay voltage. A fault is set if test 1 or 2 detects that the valve relay is still switched on.	Missing BIST watchdog detected OR Valve relay safety switch detects a missing valve relay watchdog	= True = True	Ignition key AND Initial Fail-Safe Logic Test is running	= On = True	0.45 [Sec]	Type A, 1 Trip
		This monitoring checks if there is a short circuit to the valve relay. All hydraulic valves are supplied with power through one relay. This relay is checked for circuit continuity. A fault is set if the valve solenoid high side voltage is above a calibrated threshold, meaning a short circuit to the battery voltage is detected. The threshold depends on the system voltage.	Valve relay solenoid low side voltage	> 4.8 V	Ignition key AND Valve relay enabled AND System voltage	= On = False > 6.9 V	0.2 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
Valve Relay Circuit Low	C106F	This monitoring strategy checks if a valve relay high ohmic short to ground has occurred by comparing the valve relay output voltage (UVR) to the valve relay supply voltage (UBVR). A fault is set if the resulting ratio is below a calibrated threshold which indicates that the valve relay is shorted to ground.	Valve relay output voltage / Valve relay supply voltage	< 0.3	Ignition key AND Valve relay supply voltage	= On > 6.9 V	0.2 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if there is a valve relay short to ground by comparing the valve relay output voltage (UVR) to the valve relay supply voltage (UBVR). A fault is set if the resulting ratio is below a calibrated threshold which indicates that the valve relay is shorted to ground.	Valve relay output voltage / Valve relay supply voltage	< 0.10	Ignition key AND Valve relay supply voltage	= On > 5 V	0.04 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					
Valve Relay Circuit Performance	C106E	This monitoring strategy checks if the supply voltage (UBVR) is too low during evaluation of failsafe logic. During an undervoltage situation, an evaluation of the valve relay safety switch test is not possible. A fault is set if the supply voltage (UBVR) is below a calibrated threshold for a calibrated period of time.	Valve relay supply line voltage For time	< 5 V > 0.5 Sec	Ignition key AND Fail-Safe Logic Test	= On = On	0.5 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					
Vehicle Speed - Wheel Speed Correlation	P215A	This monitoring strategy checks if the ABS (Anti-lock Brake System) is correctly triggered. Normally, an ABS intervention should be applied for limited time. A fault is set if the system detects an ABS intervention for more than a calibrated period of time.	Anti-lock Brake System intervention for a period of time	> 60 Sec	System voltage AND Electronic Brake Control Unit state	> 6.9 V = Started with hardware reset	60 [Sec]	Type A, 1 Trip
		This monitor checks the wheel speed sensor signals for not plausible or invalid signals. The failure is set if at least three Wheel Speed Sensor (WSS) failure suspicions are set (at the same time). These WSS failure suspicions are set by other wheel speed monitorings.	Wheel Speed Sensor failure suspicions set	> 2	System voltage AND Ignition key	> 6.9 V = On	0.5 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if whether at one or at several wheels no impulse wheel or impulse wheels with wrong tooth/multiple number or wheels with a different circumference are mounted. Additionally, signal-loss caused by too high airgap between sensor and impulse wheel is detected at least over time; if another plausibility monitoring was not successful. A fault is set if an individual wheel monitor detects a deviation above a calibrated threshold but is not able to identify the faulty wheel speed sensor.	Difference between maximum and minimum wheel speed for vehicle speed OR Difference between maximum and minimum wheel speed for vehicle speed	> 3.7 mph < 12.4 mph > 6% > 12.4 mph	Ignition key	= On	80 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 1 (BSC1) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Require	MIL Illum
		This monitoring checks for wheel speed sensor failures. A suspected wheel speed sensor failure is set if any of the following monitors set a suspected failure flag: noise monitor, slip monitor, dynamic monitor, absent signal monitor or flat tire monitor. If a wheel speed sensor failure has occurred, the Traction Control System (TCS) and the valve drift check are not available. A fault is set if more than one suspected wheel speed sensor failure occur simultaneously.	Number of suspected wheel speed sensor failures in the same time	= 2	Ignition key AND System voltage AND Ignition key	= On > 6.9 V = On	0.1 [Sec]	Type A, 1 Trip
		This monitoring checks for wheel speed sensor failures. A suspected wheel speed sensor failure is set if any of the following monitors set a suspected failure flag: noise monitor, slip monitor, dynamic monitor, absent signal monitor or flat tire monitor. If a wheel speed sensor failure has occurred, the Traction Control System (TCS) and the valve drift check are not available. A fault is set if more than one suspected wheel speed sensor failure occur simultaneously for longer than a calibrated duration.	Number of suspected wheel speed sensor failures in the same time For time	= 2 > 0.5 Sec	Ignition key AND System voltage	= On > 6.9 V	> 0.5 [Sec]	Type A, 1 Trip
		DTC Pass	Drive off and straight ahead with more than 37.2 mph for at least 40s.					
Wheel Speed Sensors Supply Circuit High	C05A3	This monitoring strategy detects wheel speed sensor supply line short to battery by monitoring reverse current.	Reverse current detected on WSS supply line for	> 3.5 Sec	Ignition key	= On	3.5 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 5sec.					
Wheel Speed Sensors Supply Circuit Low	C05A4	This monitoring strategy checks the for an undervoltage situation with the System ASIC internal hardware comparator. This comparator monitors the voltage between the wheel speed sensor (WSS) power supply line and WSS signal line. A fault is set if the voltage between the WSS power supply line and WSS signal line is under the threshold.	voltage between the WSS power supply line and WSS signal line	< 6.7 V	System voltage AND Wheel speed sensor test completed	> 6.9 V = True	0.06 [Sec]	Type A, 1 Trip
		DTC Pass	Turn ignition on and wait for at least 30sec without braking.					

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
Brake Booster Internal Power Driver Range/Performance	C0595	This monitoring strategy checks the ability of the Booster Master Switch to be switched correctly. This is done by checking in 3 steps: a) The booster master switch is switched on. After a defined period the test checks if the booster master switch is switched on by evaluating the ratio of Voltage Sensor 2 and Voltage Sensor 1	Voltage Sensor2 / Voltage Sensor1	< 0.88	Software State	= Init	0.015 [Sec]	Type A, 1 Trip
		b) The Booster Master Switch is switched off. After a defined period the Voltage Sensor 2 value is evaluated.	Voltage Sensor2	> 0.88 V	Software State	= Init	0.015 [Sec]	Type A, 1 Trip
		c) The booster master switch is switched on again. After a defined period the test checks if the booster master switch is switched on by evaluating the ratio of Voltage Sensor 2 and Voltage Sensor 1	Voltage Sensor2 / Voltage Sensor1	< 0.88	Software State	= Init	0.015 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					
Brake Booster Motor "A" Current Sensor Circuit Range/Performance	C0596	This monitoring strategy checks the functionality of the over current detection system by switching the comparator off and on. This is done by setting the pulse width modulated signal to the minimum or maximum pulse ratio. The proper comparator switching is verified by reading back the comparator's output via a feedback line. A fault is set - if the comparator's output does not indicate the correct switch position for the current pulse ratio. - if the voltage at the Booster Master Switch UB6 is not close to zero or to the power supply battery voltage (UBB), depending on the current pulse ratio.	PWM ratio VoltageSensor 2/ VoltageSensor 1 PWM ratio VoltageSensor 2	= maximum < 0.88 = minimum > 0.88 V	Software State BMS control BMS control	= Init = switched on = switched off	0.03 [Sec]	Type A, 1 Trip
		This monitoring strategy checks for over current at the electric motor driver. Current through the motor driver is monitored by hardware and the feedback pin reports if over current has been detected. A fault is set if the feedback pin is at a high level.	Feedback pin level	logical high	Software State	=Init OR Running OR Shutdown	0.03 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
Brake Booster Motor "A" Performance	C0594	This monitoring strategy checks if the movement of electric motor is in proper direction. This is done by: a) Checking if the sign of the target speed matches that of the actual speed. b) Checking the changes in direction of the measured electric motor speed within a period. A counter is incremented each time a change in direction is detected.	Absolute(actual electric motor speed) Or Counter	'< 15 rad/Sec > 7	Software State Absolute(target electric motor speed) Absolute(target electric motor speed) - Absolute(actual electric motor speed)	= Running OR Shutdown > 25 rad/Sec > 15 rad/Sec	0.15 [Sec]	Type A, 1 Trip
		This monitoring strategy checks the oscillation of the booster motor. A fault is set if the sign of the actual motor speed has changed to often within a short time interval and no change of the sign of the desired speed.	sign of the actual motor speed has changed AND Sign of the desired speed has change	= True = False	Software State AND Brake Light Switch	= Running OR Shutdown = On	0.15 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if there is an unintended backward rotation of the ESC electric motor. The speed controller monitor detects an unintended backward rotation of the brake booster electric motor. A fault is set if the speed deviation is greater than a threshold.	target electric motor speed - Absolute(actual electric motor speed)	> 40 rad/Sec	Software State target electric motor speed actual electric motor speed	= Running OR Shutdown > 0 rpm ≤ 1 rpm	0.015 [Sec]	Type A, 1 Trip
		DTC PASS	Apply the brake pedal for about 50% for at least 1 sec and then release the brake pedal.					
Brake Booster Motor "A" Phase U-V-W Circuit Low	C0580	This monitoring strategy checks if the gate supply voltage of the electric motor bridge driver is too low. A gate under voltage protection circuit as a part of electric motor driver circuit compares the gate supply voltage of the bridge driver with the power supply of the electric motor. A fault is set if the gate supply voltage is too low compared to the power supply of the electric motor.	Voltage Sensor 2 – Gate supply voltage	> 7 V	Software State	= Running OR Shutdown	0.005 [Sec]	Type A, 1 Trip
			DTC PASS	Turn ignition on and wait for at least 5sec				
Brake Booster Motor "A" Phase U-V-W Circuit Range/Performance	C0582	This monitoring strategy checks if two or more gate transistors out of six of the B6-bridge are shorted to each other. One high-side transistor and one low-side transistor of different electric motor phases are switched on simultaneously (all 6 combinations will be switched once within one test execution). If two gates are shorted, one transistor switches on unintentionally, leading to a very high current. A fault is set if the current exceeds a threshold.	Current	> 150 A	Software State	= Running OR Shutdown	0.004 [Sec]	Type A, 1 Trip
			DTC PASS	Turn ignition on and wait for at least 5sec				
Brake Booster Motor "A" Phase U-V-W Circuit/Open	C057F	This monitoring strategy checks if MOS-FETs of electric motor driver can be controlled and actuate properly. This monitoring strategy checks if MOS-FETs of electric motor driver can be controlled and actuate properly. A fault is set if a low-side transistor is switched on and the PhaseW voltage is in range. Similarly A fault is set if a high-side transistor is switched on and the PhaseW voltage is in range.	low-side transistor PhaseW voltage / Voltage Sensor 2 OR high-side transistor PhaseW voltage / Voltage Sensor 2	switched on ≥ 0.463 switched on ≤ 0.483	Software State electric motor	= Running OR Shutdown = not controlled	0.005 [Sec]	Type A, 1 Trip
			DTC PASS	Turn ignition on and wait for at least 5sec				

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
Brake Booster Motor "A" Phase U-V-W Current High	C0590	This monitoring strategy checks if there is a positive leakage current at the electric motor driver circuit during control. Leakage current at motor driver is monitored during inactivity of half bridge. A fault is set if the leakage current is above a threshold.	Current Sensor	> 20 A	Software State electric motor	= Running OR Shutdown = controlled	0.005 [Sec]	Type A, 1 Trip
		DTC PASS	Apply the brake pedal for about 50% for at least 1 sec and then release the brake pedal.					
Brake Booster Motor "A" Phase U-V-W Current Low	C0591	This monitoring strategy checks if the leakage current at the motor is in range low. Leakage current at motor driver is monitored during inactivity of half bridge. A fault is set if the leakage current is below a threshold.	Current Sensor	< -20 A	Software State electric motor	= Running OR Shutdown = controlled	0.005 [Sec]	Type A, 1 Trip
		DTC PASS	Apply the brake pedal for about 50% for at least 1 sec and then release the brake pedal.					
Brake Booster Motor "A" Position Sensor Circuit Range/Performance	C058A	This monitoring strategy checks if the RPS1 has a gradient failure. The Electric Motor Speed is equivalent to the gradient of the rotor rotation. A fault is set if the RPS 1 gradient exceeds a threshold.	Absolute(RPS1 gradient)	> 73 °/mSec	Software State	= Running OR Shutdown	0.005 [Sec]	Type A, 1 Trip
		This monitoring strategy checks the rationality of the measured electric motor backward stop position. At end of line, the electric motor backward stop position is stored at EEPROM. This monitor compares the measured electric motor backward stop position with the stored electric motor backward stop position. If there electric motor rotates more than a threshold value to move to backward stop position, a mechanical defect should be present. A negative deviation of expected rotation will be detected by PreDriveCheck monitor. A fault is set if the difference between the measured electric motor backward stop position and the stored electric motor backward stop position exceeds a threshold.	Absolute(measured electric motor backward stop position - stored electric motor backward stop position)	> 60 °	Software State	= Running OR Shutdown	0.005 [Sec]	Type A, 1 Trip

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
		<p>This monitoring strategy checks if vector length of RPS vector does not exceed an upper threshold. A permanent magnet is located at the end of the electric motor shaft. The RPS uses the Giant Magneto Resistance (GMR) principle to measure the X and Y direction of the magnetic field. The rotor position is calculated using these raw values after they are internally corrected (e.g due to off-center positioning of the sensor chip in the magnetic field).</p> <p>At a given temperature, the vector length ($\sqrt{X^2 + Y^2}$) should be constant due to the defined magnetic field. Hence within the calibrated temperature range of -50°C to 150°C the vector length must lie within a defined range. A fault will be set if the calculated vector length is above a threshold.</p>	Calculated vector length	> 20000 digits	Software State	= Running OR Shutdown	0.05 [Sec]	Type A, 1 Trip
		<p>This monitoring strategy checks if the vector length value from the Rotor Position Sensor (RPS) is in range low. A permanent magnet is located at the end of the brake booster motor shaft. The Rotor Position Sensor (RPS) uses the Giant Magneto Resistance (GMR) principle to measure the X and Y direction of the magnetic field. The rotor position is calculated using these raw values after they are internally corrected (e.g due to off-center positioning of the sensor chip in the magnetic field).</p> <p>At a given temperature, the vector length ($\sqrt{X^2 + Y^2}$) should be constant due to the defined magnetic field. Hence within the calibrated temperature range of -50°C to 150°C the vector length must lie within a defined range. A fault will be set if the calculated vector length is below a threshold.</p>	Calculated vector length	< 3922 digits	Software State	= Running OR Shutdown	0.05 [Sec]	Type A, 1 Trip
		<p>This monitoring strategy checks if there is a noise in the RPS1 vector length.</p> <p>By design, the vector length ($\sqrt{X^2 + Y^2}$) is almost constant, but noise or failures on the X, Y or correction values might lead to an oscillation of the vector length. A high pass filter cuts unwanted high frequencies and noise. A fault will be set if the peak amplitude of the oscillation or noise of the RPS1 vector length is greater than a threshold.</p>	Absolute(Noise amplitude)	> 190 digits	Software State	= Running OR Shutdown	0.05 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
Brake Booster Rotor Position Sensor Configuration Error	C1277	This monitoring strategy checks if the rotor position sensor IC configuration EEPROM cell is valid. The configuration EEPROM cells of the Rotor Position Sensor (RPS) integrated circuit are monitored to ensure that the original configuration does not change. A fault is set if at least one monitored bit in the rotor position sensor IC configuration EEPROM cells differs from expected value.	Bit value	≠ expected bit value	Software State	= Running OR Shutdown	0.02 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					
Brake Booster Rotor Position Sensor Message Counter Incorrect	C1276	This monitoring strategy checks if all RPS (Rotor Position Sensor) data are periodically updated. For the raw values, the correction values and the rotor angle, an update-flag within the RPS safety word exists which shows if all these values are periodically updated, not updated or still in the init-state. A fault will be set if the update-flag within the RPS safety word is either "not updated" or "init".	update-flag of RPS safety word OR update-flag of RPS safety word	= NOT_UPDATED = INIT	Software State	= Running OR Shutdown	0.1 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the RPS1 internal clock works properly. The life counter monitoring detects if the internal IC clock is running with the desired frequency. At each clock cycle a counter is incremented in register cell. Between two monitoring tasks, the counter is incremented in a range corresponding to the ratio of clock-frequency to monitoring-frequency. A fault will be set if the counter increment is outside the range.	Counter increment OR Counter increment	< 6 > 24	Software State	= Running OR Shutdown	0.015 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if The Cyclic Redundancy Check (CRC) is correct. A CRC is sent from the Rotor Position Sensor (RPS) IC to the eBoost ECU for all data which is checked by eBoost. A fault is set if the recalculated CRC does not match the received one.	calculated checksum	≠ received checksum	Software State	= Running OR Shutdown	0.005 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					
Brake Booster Rotor Position Sensor Unexpected Reset	C1275	This monitoring strategy checks if there was an unexpected reset at RPS. According to the specification of the Rotor Position Sensor (RPS) chip, the sensor can perform a reset under specific conditions (e.g. under voltage). If a reset happens, the position of the electric motor cannot be calculated anymore. The Hardware Related Software (HSW) checks if a reset of the sensor has happened by monitoring the reset-flag in EEPROM cell. A fault is set if the reset flag is set.	Reset-flag	= 1	Software State	= Running OR Shutdown	immediately	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
Brake Pedal Position Sensor "A" Circuit High	P057D	This monitoring strategy checks if there is a circuit high at BPTS A. The brake pedal travel sensor signal A line monitor detects a short circuit to the supply voltage when no level change is detected for a period and logical signal level is high. A fault is set if there is a circuit high at BPTS A.	BPTS A signal line voltage AND rising or falling edge of BPTS A PWM	> 4.7 V = not detected	Software State	= Running OR Shutdown	0.03 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					
Brake Pedal Position Sensor "A" Circuit Intermittent/Erratic	P057E	This monitoring strategy checks if there is a BPTS A gradient error. This monitoring is detecting the gradient only in backward direction. There is no definition possible, how quick a driver can push the brake pedal. Negative gradient monitoring is used to prevent mechanical defects. A fault is set if the gradient of signal A is out of range.	BPTS A gradient	< -2000 mm/Sec	Software State	= Running OR Shutdown	0.005 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					
Brake Pedal Position Sensor "A" Circuit Low	P057C	This monitoring strategy checks if there is a circuit low at BPTS A. The brake pedal travel sensor signal A line monitor detects a short circuit to ground when no level change is detected for a period and logical signal level is low. A fault is set if there is a circuit low at BPTS A.	BPTS A signal line rising or falling edge of BPTS A PWM	< 0.3 V = not detected	Software State	= Running OR Shutdown	0.03 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					
Brake Pedal Position Sensor "A" Circuit Range/Performance	P057B	This monitoring strategy checks if BPTS A is out of range high. A fault is set if the BPTS A is above a threshold.	BPTS A	> 47 mm	Software State	= Running OR Shutdown	0.04 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if BPTS A is out of range low. A fault is set if the BPTS A is above a threshold.	BPTS A	< -0.5 mm	Software State	= Running OR Shutdown	0.04 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if there is a BPTS A communication fault. The brake pedal travel sensor module is working with a frequency of 1 kHz. This is done by checking if - the frequency of the Pulse Width Modulated signal is in range. - the duty cycle of the Pulse Width Modulated brake of pedal position sensor A is in range. A fault is set if - the frequency is out of range. - the duty cycle of BPTS A is out of range.	BPTS A PWM frequency OR BPTS A PWM frequency OR BPTS A PWM duty cycle OR BPTS A PWM duty cycle	< 879.3 1/Sec > 1127.17 1/Sec < 7.32 % > 92.83 %	Software State	= Running OR Shutdown	0.1 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					
Brake Pedal Position Sensor "A"/"B" Correlation	P05E0	This monitoring strategy checks if there is a deviation between the two sensor channels. A fault is set if the absolute value of the difference between both signals exceeds a threshold.	Absolute(BPTS A - BPTS B) OR Absolute(BPTS A - BPTS B)	> 1 mm > 0.5 mm	BPTS A signal AND BPTS B signal OR BPTS A signal AND BPTS B signal	> 42 mm > 42 mm ≤ 42 mm ≤ 42 mm	0.5 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
		This monitoring strategy checks if zero position of brake pedal is in range. The brake pedal travel sensor provides two separate signals with different transmissions and signal conditionings. This monitor checks if the arithmetic mean of BPTS A and BPTS B when brake pedal is not applied is within a tolerated range. A fault is set if the arithmetic mean of BPTS A and BPTS B is above a threshold.	(BPTS A + BPTS B) / 2 (BPTS A + BPTS B) / 2	> 0.6 mm < 1.5 mm	Software State	= Running OR Shutdown	0.5 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait at least 60 sec with released brake pedal while the brake system and fluid has a temperature of approximately 20C					
Brake Pedal Position Sensor "B" Circuit High	P05DE	This monitoring strategy checks if there is a circuit high at BPTS B. The brake pedal travel sensor signal B line monitor detects a short circuit to the supply voltage when no level change is detected for a period and logical signal level is high. A fault is set if there is a circuit high at BPTS B.	BPTS B signal line rising or falling edge of BPTS B PWM	> 4.7 V = not detected	Software State	= Running OR Shutdown	0.03 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					
Brake Pedal Position Sensor "B" Circuit Intermittent/Erratic	P05DF	This monitoring strategy checks if there is a BPTS B gradient error. This monitoring is detecting the gradient only in backward direction. There is no definition possible, how quick a driver can push the brake pedal. Negative gradient monitoring is used to prevent mechanical defects. A fault is set if the gradient of BPTS B is above a threshold.	BPTS B gradient	< -2000 mm/Sec	Software State	= Running OR Shutdown	0.005 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					
Brake Pedal Position Sensor "B" Circuit Low	P05DD	This monitoring strategy checks if there is a circuit low at BPTS B. The brake pedal travel sensor signal B line monitor detects a short circuit to ground when no level change is detected for a period and logical signal level is low. A fault is set if there is a circuit low at BPTS B.	BPTS B signal line rising or falling edge of BPTS B PWM	< 0.3 V = not detected	Software State	= Running OR Shutdown	0.03 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					
Brake Pedal Position Sensor "B" Circuit Range/Performance	P05DC	This monitoring strategy checks if BPTS B is out of range high. A fault is set if the BPTS B is above a threshold.	BPTS B	> 47 mm	Software State	= Running OR Shutdown	0.04 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if BPTS B is out of range low. A fault is set if the BPTS B is above a threshold.	BPTS B	< -0.5 mm	Software State	= Running OR Shutdown	0.04 [Sec]	Type A, 1 Trip

		This monitoring strategy checks if the message checksum is correct. The network driver sends and receives all network messages. It also checks if the messages are correct (length, checksum, alive-counter, reception timeout). With each newly sent message a checksum is calculated within the sending ECU. The value of the checksum is enclosed within the message. The receiving control unit calculates the checksum again and compares it with the sent one. A fault is set if the received checksum is different from the calculated checksum.	Checksum of 0x21E on Bus E not correct	= True	System voltage AND System voltage AND Bus Off Fault Active ECU is sending/receiving on CAN AND ECU Power Mode transition diagnostic enable delay timer	> 7.5 V < 16 V = False = True ≥ 5 Sec	0.2 [Sec]	Type A, 1 Trip
Control Module Communication Chassis Expansion CAN Bus Off - Generic	U0077	The CAN (Control Area Network) bus E state is monitored periodically. A fault is set if the bus is in "Bus Off" state.	CAN bus E state	= Bus off	System voltage AND System voltage ECU is sending/receiving on CAN AND ECU Power Mode transition diagnostic enable delay timer	> 7.5 V < 16 V = True ≥ 5 Sec	0.09 [Sec]	Type A, 1 Trip
		This monitoring checks if the CAN initialization function has taken too long to finish . The access to message Ram by the CAN-Core is handle through a message interface register. In each cycle a CAN register bit is checked to determine if the bit is set. A fault is set if the loop lasts longer than a threshold	Number of CAN cycles	> 1000	Software State	= Init	0.01 [sec]	Type A, 1 Trip
Control Module Communication High Speed CAN Bus Off - Generic	U0073	The CAN (Control Area Network) bus A state is monitored periodically. A fault is set if the bus is in "Bus Off" state.	CAN bus A state	= Bus off	System voltage AND System voltage ECU is sending/receiving on CAN AND ECU Power Mode transition diagnostic enable delay timer	> 7.5 V < 16 V = True ≥ 5 Sec	0.24 [Sec]	Type B, 2 Trips

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
		This monitoring checks if the CAN initialization function has taken too long to finish . The access to message Ram by the CAN-Core is handle through a message interface register. In each cycle a CAN register bit is checked to determine if the bit is set. A fault is set if the loop lasts longer than a threshold	Number of CAN cycles	> 1000	Software State	= Init	0.01 [sec]	Type B, 2 Trips
Control Module Input Power "A" Circuit High	U3502	This monitoring checks the system supply voltage. A fault is set if the voltage is greater than a calibrated threshold.	CAN supply voltage	> 16 V	Software State	= Running	0.09 [Sec]	Type B, 2 Trips
		DTC PASS	Turn ignition on and wait for at least 30sec					
Control Module Input Power "A" Circuit Low	U3501	This monitoring strategy checks if voltage sensor 3 is out of range low, which means below the HW (Hardware) switch off threshold but the HW is not switched off for the particular time. A fault is set if the voltage sensor 3 is below a threshold	Ecu supply voltage	< 4.9 V	Software State	= Running	0.2 [Sec]	Special Type C
		This monitoring checks the system supply voltage. A fault is set if the voltage is less than a calibrated threshold.	CAN supply voltage	< 7.5 V	Software State	= Running	0.09 [Sec]	Special Type C
		DTC PASS	Turn ignition on and wait for at least 30sec					
Control Module Input Power "B" Circuit/Open	U3007	A fault is set if the Voltage Sensor 1 voltage drops below a threshold.	Voltage Sensor 1	< 2 V	Software State	= Running OR Shutdown	0.1 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					
Control Module Input Power "B" Circuit High	U3506	This monitoring strategy checks the power supply battery (UBB) voltage. A fault is set If the UBB detection voltage is above the voltage limit for an extended period of time.	UBB AND Period of time	> 17 V = 90 Sec	Software State	= Running OR Shutdown	90 [Sec]	Type B, 2 Trips
		This monitoring strategy checks the range of the supply voltage of the complex device driver module. A fault is set if this voltage is above a calibrated threshold.	Complex device motor voltage	> 18 V	Software State	= Running OR Shutdown	1.1 [Sec]	Type B, 2 Trips
		This monitoring strategy checks the power supply battery (UBB) voltage. A fault is set if the performance is reduced due to a voltage UBB above the level 1.	UBB AND Period of time	> 16.5 V = 1.1 Sec	Software State	= Running OR Shutdown	1.1 [Sec]	Type B, 2 Trips
		DTC PASS	Turn ignition on and wait for at least 90sec					
Control Module Input Power "B" Circuit Low	U3505	This monitoring strategy checks if Voltage Sensor 1 is out of range low. A fault is set if the voltage sensor 1 is below a threshold.	Voltage Sensor 1	< 6 V	Software State	= Running OR Shutdown	30 [Sec]	Special Type C

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
		This monitoring strategy checks the power supply battery (UBB) voltage. A fault is set if the UBB detection voltage is below the voltage limit for an extended period of time.	UBB AND Period of time	< 9.3 V = 90 Sec	Software State	= Running OR Shutdown	90 [Sec]	Special Type C
		This monitoring strategy checks the range of the supply voltage of the complex device driver module. A fault is set if the voltage is less than a threshold.	Complex device motor voltage	< 6 V	Software State	= Running OR Shutdown	0.2 [Sec]	Special Type C
		This monitoring strategy checks the power supply battery (UBB) voltage. A fault is set if the system performance is reduced due to low voltage under level 1.	UBB	< 9.3 V	Software State	= Running OR Shutdown	0.2 [Sec]	Special Type C
		This monitoring strategy checks the power supply battery (UBB) voltage. A fault is set if the system performance is reduced due to low voltage under level 2.	UBB	< 7.5 V	Software State	= Running OR Shutdown	0.2 [Sec]	Special Type C
		DTC PASS	Turn ignition on and wait for at least 90sec					
Control Module Input Power "C" Circuit High	U350A	This monitoring strategy checks if Voltage Sensor 2 is out of range high. A fault is set if the Voltage Sensor 2 is above a threshold.	Voltage Sensor 2	> 19.8 V	Software State AND vehicle speed	= Running OR Shutdown > 4 mph	90 [Sec]	Type A, 1 Trip
		DTC PASS	Drive straight ahead for at least 3.1 mile					
Control Module Input Power "C" Circuit Low	U3509	This monitoring strategy checks if Voltage Sensor 2 is out of range low. A fault is set if the Voltage Sensor 2 is below a threshold.	Voltage Sensor 2	< 6 V	Software State AND vehicle speed	= Running OR Shutdown > 4 mph	90 [Sec]	Type A, 1 Trip
		DTC PASS	Drive straight ahead for at least 3.1 mile					
Control Module Input Power Circuit "A/B" Correlation	U3018	This monitoring checks if the battery power supply (UBB) is not too low compared to the ECU power supply to ensure a reliable switching of the Booster Master Swith. A fault is set if the difference between UBB and UB_ECU is higher than a threshold	UBB - UB_ECU	> 7 V	Software State	= Init OR Running OR Shutdown	0.01 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
		This monitoring strategy checks if the battery can provide enough power to the system. The central coordinator component in Electric Brake Booster Control Module is used to coordinate some initial tests and specific cyclic Electric Brake Booster Control Module Monitoring which depends on each other. A prerequisite for all initial tests except for the failsafe logic handler test is a sufficient Electric Brake Booster Control Module Power Supply Battery UBB. If the voltage is too low, the coordinator tests are delayed. During initial phase, all tests must be done once. If the initial phase takes too long, an undervoltage situation is given. A fault is set if any tests are initially delayed.	UBB OR [UBB_ECU AND UBB-UBB_ECU] OR [UBB_ECU AND UBB-UBB_ECU]	< 6 V > 8.5 V > 3.5 V ≤ 8.5 V > 1.5 V	Software state	= Init	0.5 [sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					
Control Module Input Power Circuit "B/C" Correlation	U3019	This monitoring strategy checks Voltage divider drift between the booster circuit supply line (Voltage Sensor 1) and the Motor Driver supply line (Voltage Sensor 2). A fault is set if the ratio of Voltage Sensor 1 and Voltage Sensor 2 is outside a range.	Voltage Sensor 2/Voltage Sensor 1 OR Voltage Sensor 2/Voltage Sensor 1	> 1.321 < 0.766	Software State	= Running OR Shutdown	2 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					
Control Module Internal Performance	P0606	This monitoring strategy checks the proper functionality of the CPU Compare Module. The software is executed on 2 CPU cores simultaneously instruction by instruction (lock step mode). The output of both cores is compared by the CPU Compare Module. A self test runs at Init to verify that the CPU Compare Module is working properly. A fault will be set if the selftest failed.	Core Compare Module selftest	= failed	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks if there is a CPU exception. A fault is set if a data abort, a prefetch abort, or an undefined instruction occurs.	Data abort occurs OR Prefetch abort occurs OR Undefined instruction occurs	= True = True = True	Software State	= Init OR Running OR Shutdown	immediately	Type A, 1 Trip
		This monitoring strategy checks if the execution of a sensitive process task jitters too much. A fault is set if the real process execution time is greater than its ideal start time increased by a percentage.	The execution time of the internal system process task (ibooster systems)	> Ideal Time + 10% s	Software State	= Init OR Running OR Shutdown	immediately	Type A, 1 Trip
		This monitoring strategy checks if the reference voltage of A/D-converter is out of range. A fault is set if the bandgap voltage of the ADC is outside the allowable range.	Analog Digital Converter bandgap voltage OR Analog Digital Converter bandgap voltage	< 1145 V > 1345 V	Software State	= Init OR Running OR Shutdown	immediately	Type A, 1 Trip

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
		This monitoring strategy tests whether the system chip detects a missing watchdog trigger. At Initialization, the safety controller switches off the BMS. At switched off the BMS, a watchdog trigger is expected. If this trigger is missed, A fault is set. A fault is set if BMS switched off does not set a watchdog trigger.	Watchdog trigger AND BMS gate	missed not switched off	Software State	= Init	1 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the motor driver circuit is able to be switched off and on. The electric motor driver switching (on/off) is tested by the microcontroller and the safety controllers to detect any short-circuit or interruption of the enable signal line. A fault is set if the electric motor driver is not properly switched off and on.	(Command sent : AND Motor Driver) OR (Command sent : AND Motor Driver)	switch off enabled switch on disabled	Software State	= Init	1 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the error pin event counter is in range. The monitor pulls the error pin to test the event counter within the system chip. To prevent an electrical shutdown (which would disturb communication) during the provoked error pin event, the electrical decouple bit is set. A fault is set if the error pin event counter does not increment, or if the decouple bit is not reset.	Error pin event counter not incremented	= True	Software State	= Running	1 [sec]	Type A, 1 Trip
		This monitoring strategy checks if there is a High End Timer (HET) exception. A fault is set if a failure is detected in the EEPROM cell.	Failure detected in register of High End Timer	= True	Software State	= Init OR Running OR Shutdown	immediately	Type A, 1 Trip
		This monitoring strategy checks for proper of the High End Timer Transfer Unit (HETTU) addressing functionality. When a pointer error is detected, the HETTU state switches to a specific value. A fault is set if the HETTU is in the pointer error state.	High End Timer Transfer Unit Status	= "pointer error"	Software State	= Init OR Running OR Shutdown	Immediately	Type A, 1 Trip
		This monitoring strategy checks the High End Timer Transfer Unit (HETTU) internal bus. A fault is set if a bus error is detected.	High End Timer Transfer Unit Status	= "bus error"	Software State	= Init OR Running OR Shutdown	Immediately	Type A, 1 Trip
		This monitoring strategy checks the High End Timer Transfer Unit (HETTU) internal bus. A fault is set if a bus error is detected.	High End Timer Transfer Unit Status	= "busy bit error"	Software State	= Init OR Running OR Shutdown	Immediately	Type A, 1 Trip
		This monitoring strategy checks if there was a High End Timer Transfer Unit (HETTU) exception. A fault is set if an exception occurs.	Failure detected in register INT	= True	Software State	= Running	Immediately	Type A, 1 Trip

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
		This monitoring strategy checks if the eBoost internal motor driver enable signal line or the electrical enable signal line are in logical low. It is expected that the enable signal lines always stay at a high voltage level (except when the SW intends a different state). A fault is set if at least one of the pins reports a logical low.	Pin level of Motor Driver enable line OR Pin level of electrical enable line	= 0 (logical low) = 0 (logical low)	Software State AND failsafe logic test	= Running OR Shutdown = Finished	0.05 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if there was a task failed to call. A fault will be set if a task did not start in the expected time.	Watchdog detects a missing task	= True	Software State	= Init OR Running OR Shutdown	immediately	Type A, 1 Trip
		This monitoring strategy checks the system integrated circuit watchdog fault counter. A fault is set if this error counter exceeds a threshold.	Error counter	> 3	Software State	= Running OR Shutdown	immediately	Type A, 1 Trip
		This monitoring strategy checks if the watchdog trigger is received as expected. An incorrect watchdog trigger signal is sent to the system chip watchdog function, which increments the watchdog error counter. A fault is set if the watchdog fault counter is not incremented.	Incorrect watchdog data sent to chip	= True	Software State	= Running OR Shutdown	1 [sec]	Type A, 1 Trip
		This monitoring strategy checks if all possible watchdog triggers are received within a certain time by the system chip. A fault will be set if not all watchdog tasks are done in a certain period.	Number of watchdog tasks done	< Number of watchdog tasks	Software State	= Running OR Shutdown	0.45 [Sec]	Type A, 1 Trip
		This monitoring strategy checks the status of the watchdog. During the initialization test the watchdog status feedback from the system chip is tested against several patterns according to the ongoing sub test. A fault is set if the watchdog status is not as expected.	Watchdog status	≠ expected watchdog status	Software State	= Running OR Shutdown	1 [sec]	Type A, 1 Trip
		This monitoring strategy checks the status of the watchdog. After the Init test has finished, the status of the watchdog respectively the safety logic is being continuous Monitored. A fault will be set if the status is not as expected.	Watchdog status	≠ expected watchdog status	Software State	= Running OR Shutdown	0.05 [Sec]	Type A, 1 Trip
		This monitoring strategy checks correct handling of NMI. The Error Signal Module is the central module at the microcontroller level; it handles severe microcontroller core failures or peripheral failures, and coordinates the logic tests during start-up. A fault is set if the Non-Maskable Interrupt handler detects a failure During Init tests.	Non-Maskable Interrupt occurs	= True	Software State	= Init	immediately	Type A, 1 Trip

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
		This monitoring strategy checks if a severe microcontroller core or peripheral failure occurred. The Error Signal Module (ESM) is the central module at the microcontroller level; it handles severe microcontroller core or peripheral failures. A fault is set when severe microcontroller core or peripheral failures occurred.	A microcontroller core failure via Error Signal Module is detected OR Peripheral failure via ESM is detected	= True = True	Software State	= Running OR Shutdown	immediately	Type A, 1 Trip
		This monitoring strategy checks whether the HET has the proper reference signal frequency. The monitor compares the defined frequency with the actual reference signal frequency, which is calculated by the HET. A fault is set if the difference between the defined frequency and the actual frequency exceeds a threshold.	Absolute(Defined frequency - calculated frequency) / defined frequency	> 0.05	Software State	= Running OR Shutdown	immediately	Type A, 1 Trip
		This monitoring strategy tests the Serial Peripheral Interface (SPI) functionality and failure handling of the Application Specific Integrated Circuits (ASIC) used in the system. To do so, the SPI component provides special functions to perform the following tests : - reading from/writing to an undefined address EEPROM cell - writing to a non-writable EEPROM cell - reading a EEPROM cell with a parity failure during transmission - reading a EEPROM cell with a clock failure during transmission For each of these tests, a certain fault response is expected from the ASIC. A fault is set if at least one fault response does not match the expected one.	No or wrong fault response from ASIC while reading from an undefined address register OR No or wrong fault response from ASIC while writing to an undefined address register OR No or wrong fault response from ASIC while writing to a non-writable register OR No or wrong fault response from ASIC while reading a register with a parity error in frame 1 during transmission OR No or wrong fault response from ASIC while reading a register with a parity error in frame 2 during transmission OR No or wrong fault response from ASIC while reading a register with a clock failure (less clock pulses) during transmission OR No or wrong fault response from ASIC while reading a register with a clock failure (more clock pulses) during transmission	= True = True = True = True = True	Software State	= Init	immediately	Type A, 1 Trip

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum

		<p>This monitoring strategy checks if there is a Serial Peripheral Interface (SPI) communication failure. The Application Specific Integrated Circuits (ASIC) of the system are connected to the microcontroller via a SPI. The microcontroller includes hardware Monitoring of the ASIC to recognize failures of the necessary input signals. The Monitor reads the results of certain of this hardware Monitoring by reading out the ASIC EEPROM cell via Serial Peripheral Interface. A fault is set if charge-pump failure bit, or clock-input-signal failure bit, or internal-oscillator-circuit failure bit is set.</p>	<p>Charge-pump failure bit is set OR Clock-input-signal failure bit is set OR Internal-oscillator-circuit failure bit is set</p>	<p>= True = True = True</p>	Software State	= Init	0.2 [Sec]	Type A, 1 Trip
		<p>This monitoring strategy checks the voltage comparators of the ASIC. The Application Specific Integrated Circuit (ASIC) has several voltage comparators to monitor the level of different voltage supplies. These comparators are tested at start-up for correct functionality, and the result of the test is stored as a EEPROM cell value. A fault is set if there is an error flag when the monitor reads the EEPROM cell value.</p>	<p>Error flag is set in a defined register</p>	= True	Software State	= Init	Three consecutive ignition cycles	Type A, 1 Trip

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
		This monitoring strategy checks if there is a timeout of the Serial Peripheral Interface (SPI) communication to Application Specific Integrated Circuit (ASIC). The Application Specific Integrated Circuit (ASIC) of the system is connected to the microcontroller via a Serial Peripheral Interface (SPI). The goal is to monitor the duration of the SPI transmission. A fault is set if the SPI transfer to ASIC is not finished within a defined period.	Duration of SPI transfer to ASIC	> 0.005 Sec	Software State	= Init	0.05 [Sec]	Type A, 1 Trip
		The monitoring checks the received data by the Application Specific Integrated Circuit (ASIC). The ASIC of the system is connected to the microcontroller via a Serial Peripheral Interface (SPI). A fault is set if not all data has been transmitted or received. Parity check - The ASIC of the system is connected to the microcontroller via a serial Peripheral Interface (SPI). The monitoring checks the received data by the ASIC. A fault is set if the calculated parity does not match the parity bit. Bit check - The ASIC of the system is connected to the microcontroller via a serial Peripheral Interface (SPI). The monitoring checks the received data by the ASIC. A fault is set if at least one bit of the actual transmitted data is not equal to the transmit bit in register. Rationality check - The ASICs of the system is connected to the microcontroller via a serial Peripheral Interface (SPI). When ASIC detects a transmission failure, it sends an error frame via the SPI. The monitoring checks the frames transmitted via the SPI. A fault is set if an error frame is transmitted.	Length of received data OR Calculated parity of the received data OR Clock failure OR Actual transmitted bits OR Error frame received	≠ length of send data ≠ received parity bit = True ≠ bits in register ≠ bits in register	Software State	= Init OR Running OR Shutdown	0.05 [sec]	Type A, 1 Trip
		This monitoring strategy checks if there was an exception in Operating System. A fault is set if an exception occurs in the Operating System.	OS-exception occurs	= True	Software State	= Running OR Shutdown	immediately	Type A, 1 Trip
		This monitoring strategy checks if the Static Random Access Memory (SRAM) and peripheral Random Access Memory (RAM) are initialized or not. The SRAM and peripheral RAM are cleared at power-up. Then this Monitoring reads every SRAM and RAM addresses. A fault will be set if at least one adresse is not initialized to zero.	At least one RAM or SRAM bit	≠ 0	Software State	= Init	immediately	Type A, 1 Trip

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
		This monitoring strategy checks if a wrong hexfile was flashed in the AECU. The purpose of RTP pins is to do measurement of RAM variables. A fault is set if the RTP Enable pin is stuck to a high.	RTP Enable pin stuck to high	= True	Software State	= Init	Immediately	Type A, 1 Trip
		The System Mode Manager (SMM) asks in parallel with multiple system modes for the individual modules. To do this, it receives requests from different parts of software which are initialized at the beginning and after a while a valid value is given which is not "init" value. A fault is set if after a while one requester is still in init value.	One requester still in init value for time	> 3.6 Sec	Software State	= Running	3.6 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if the microcontroller stack has over or underflowed. During initialization, stack memory cells are set at the beginning and at the end of the stack area: these Stack memory cells are checked periodically. A fault is set if one of these Stack memory cells has been overwritten.	End-stack word overwritten OR Beginning-stack word overwritten	= True = True	Software State	= Init	0.04 [sec]	Type A, 1 Trip
		This monitoring strategy checks the time to configure the Application Software, during the system startup. A fault will be set if it lasts longer than a defined period.	ASW configuration time	> 5 Sec	Software State	= Init	5 [Sec]	Type A, 1 Trip
		This monitoring strategy checks for an unsupported Bootblock and FSW clock configuration in ECU. Within an ECU, the Bootblock allows actualizing the application which is called FSW. A failure is set if the Bootblock and FSW clock settings are different.	Bootblock and FSW clock settings are different	= True	Software State	= Init	Immediately	Type A, 1 Trip
		This monitoring strategy checks if an internal fault has occurred in the operating system. A fault is set if software interrupts have occurred but: - the interrupt is invalid. - An interrupt lock release is called without previous lock. - not all interrupts are released.	Software interrupt occurred AND { Invalid interrupt occurred OR Interrupt lock release is called without previous lock OR Not all interrupts are released OR Interrupt lock time }	= True = True = True = True > 0.001 Sec	Software State	= Init OR Running OR Shutdown	Immediately	Type A, 1 Trip
		This monitoring strategy checks if interrupts are properly running. The error signal module is the central module in the microcontroller level. It handles severe microcontroller core failures or peripheral failures, and coordinates the logic tests during start-up. A fault is set if no or not expected non-maskable interrupt occurs during Init tests.	Failure detected during safety logic startup tests	= True	System voltage	> 6.9 V	Immediately	Type A, 1 Trip

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
		This monitoring strategy checks if the software is properly configured for the hardware. Software version and device identifiers of the Application Specific Integrated Circuit (ASIC) and of the microcontroller are compared with the software version and identifiers of the configuration software. A fault is set if a least one ID or software version does not match.	Received ID of microcontroller is not identical with the ID stored in the software	= True	Software State	Init	0.03 [sec]	Type A, 1 Trip
		This monitoring strategy checks if there are internal and input signal failures of the Application Specific Integrated Circuit (ASIC). The ASIC is connected to the microcontroller by Serial Peripheral Interface (SPI). The monitor reads the results of this hardware monitoring EEPROM cell using Serial Peripheral Interface. The bits of the EEPROM cell are set by the hardware logic "Voltage-Pre_regulator-Mode". A fault is set if the voltage-pre-regulator-mode failure bit is set.	Voltage-pre-regulator-mode failure bit is set	= True	Software State	= Running OR Shutdown	0.2 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 30sec					
Control Module Long Term Memory Performance	P062F	This monitoring checks for a plausible EEPROM ceel defect. A fault is set if the "gap lap adjust" correction factor can not be read from the EEPROM	Gap lap adjust correction factor can not be read	= True	Software State	= Init	Immediately	Type A, 1 Trip
		This monitoring strategy checks for a plausible EEPROM cell defect. A fault is set if the update of the plant Jump-In Gain adjustment failed.	Update of Plant Jump-In Gain Adjustment failed	= True	Software State	= Init	Immediately	Type A, 1 Trip
		This monitoring strategy checks if there is enough available space in the EEPROM (Electrically Erasable Programmable Read-Only Memory) to allocate a data field. A fault is set if the size of the data field is bigger than the amount of available space in EEPROM.	Data field size to allocate	> Available Space	Software State	= Init OR Running OR Shutdown	immediately	Type A, 1 Trip
		This monitoring strategy checks if it is possible to write data in persistent storage. Every write access to non-volatile memory in the EEPROM (Electrically Erasable Programmable Read-Only Memory) is protected by timeout monitoring and data verification after writing. The Persistent Data Manager checks persistent data access in EEPROM. A fault is set if a write operation occurs or if data verification after writing fails.	Writing operation	> 0.025 Sec	Software State	= Running	immediately	Type A, 1 Trip

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
		This monitoring strategy check if the the Master Cylinder pressure sensor offset can be written. A fault is set if the value can not be written in the EEPROM during postrun	write failure occurred	= True	Software State	= Shutdown	immediatly	Type A, 1 Trip
		This monitoring checks if there is no write failure during the system shutdown phase. A fault is set if values can not be written in the EEPROM during postrun	write failure occurred	= True	Software State	= Shutdown	0.02 [Sec]	Type A, 1 Trip
		This monitoring checksthe CAN initialization function has taken too long to finish . The access to message Ram by the CAN-Core is handle through a message interface register. In each cycle a CAN register bit is checked to determine if the bit is set. A fault is set if the loop lasts longer than a threshold	Number of CAN cycles	> 1000	Software State	= Running	0.02 [Sec]	Type A, 1 Trip
		This monitoring checksthe CAN initialization function has taken too long to finish . The access to message Ram by the CAN-Core is handle through a message interface register. In each cycle a CAN register bit is checked to determine if the bit is set. A fault is set if the loop lasts longer than a threshold	Number of CAN cycles	> 1000	Software State	= Running	0.02 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					
Control Module Long Term Memory Reset	P0603	This monitoring cheks for a plausible EEPROM cell defect. A fault is set if the regenerative braking counter value can not be read from the EEPROM	Regenerative braking counter value can not be read	= True	Software State	= Init	Immediately	Type A, 1 Trip
		This monitoring checks for a plausible EEPROM cell defect. A fault is set if the delta dead volume of the Pression-Volume (pV) characteristics can not be read from the EEPROM	Delta dead volume of the pV characteristics can not be read	= True	Software State	= Init	Immediately	Type A, 1 Trip
		This monitoring cheks for a plausible EEPROM cell defect. A fault is set if the Pressure-Volume characteristics correction factor can not be read from the EEPROM.	Pressure-Volume characteristics correction factor can not be read	= True	Software State	= Init	Immediately	Type A, 1 Trip
		This monitoring strategy checks the stored value of Elektric Motor idle position. The rotor idle position is written to an EEPROM cell at the end of the production line. This EEPROM cell is read at Ignition State. A fault will be set if the stored value of the "Motor_IdlePositionTravel" could not be read from EEPROM cell.	Read failure occurs	= True	Software State	= Init	immediatly	Type A, 1 Trip

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
		This monitoring strategy checks if there is no calibration of electric motor idle position. The rotor idle position is written to a EEPROM cell of an EEPROM at end of production line. This EEPROM cell is read at Ignition State. A fault is set if the EEPROM cell is empty.	Register is empty	= True	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks if the stored Electric Motor angle at the lower end stop position can be read. The brake booster electric motor angle at the lower end stop position is measured and written to an EEPROM cell at the end of the production line. This EEPROM cell is read at Ignition State. A fault is set if a read failure occurs.	Read failure occurs	= True	Software State	= Init	immediately	Type A, 1 Trip
		This Monitoring checks that one value of the eBoost basic Init conditions is available. The brake booster motor angle at backwards bound is measured and written to an EEPROM cell at end of production line. This EEPROM cell is read at Ignition State. A fault is set if the EEPROM cell is empty.	Register is empty	= True	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks if there is a reading problem of the EEPROM. The plunger release position is written to an EEPROM cell of an EEPROM at the end of the production line. This EEPROM cell is read at Ignition State. A fault is set if a read failure occurs.	Read failure occurs	= True	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks if data in EEPROM is empty. The plunger release position is written to a EEPROM cell the end of production line. This EEPROM cell is read at Ignition State. A fault is set if the EEPROM cell is empty.	Register is empty	= True	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks if the customer identifier is correct. At Init, the persistent data manager checks the mismatch of the EEPROM cell value and expected customer ID. A fault is set if the expected customer ID does not match with the stored customer ID.	Stored customer ID	≠ expected customer ID	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks if the system do not find the enhanced platform software end marker which is use to help the system to find the end of data. At ignition state, the Persistent Data Manager checks the content of the EEPROM. A fault is set if the enhanced platform software end marker has not been found.	No enhanced platform software end marker in EEPROM	= True	Software State	= Init	immediately	Type A, 1 Trip

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
		This monitoring strategy checks the stored data field size is correct. At Ignition State, the Persistent Data Manager checks the content of the EEPROM. A fault is set if a data field size in EEPROM does not match data item configuration in software.	Data field size in the EEPROM	≠ data size configuration in software	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks the reading accessibility of the EEPROM. At Init, the Persistent Data Manager checks the content of the EEPROM. A fault is set if an access error occurs while reading the EEPROM.	Read error occurs OR Not expected Non-Markable Interrupt detected	= True = True	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks if a stored BPTS value can be read. The BPTS detects the position of the brake pedal. Before providing proper values, the BPTS has to be calibrated using calibration values stored in an EEPROM cell. This EEPROM cell is read during the eBoost initialization state. A fault is set if a read failure occurs.	read failure occurred	= True	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks if the EEPROM cell which contains the calibrations value of the Brake Pedal Travel Sensor (BPTS) is empty. The BPTS provides two separate signals with different transmissions and signal conditionings. Each signal is calibrated at end of production line, and calibration values are written to a cell of an EEPROM. This EEPROM cell is read at Ignition State. A fault is set if the EEPROM cell is empty.	Register is empty	= True	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks if the calibrated position value can be read. The Brake Pedal Travel Sensor (BPTS) detects the position of the brake pedal. Before providing proper values, it has to be calibrated by using calibration values stored in an EEPROM cell. This EEPROM cell is read at Init State. A fault is set if a read failure occurs.	Read failure occurs	= True	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks if the calibrated offset value can be read. The Brake Pedal Travel Sensor (BPTS) detects the position of the brake pedal. Before providing proper values, it has to be calibrated by using calibration values stored in an EEPROM cell. This EEPROM cell is read at Init State. A fault is set if a read failure occurs.	Read failure occurs	= True	Software State	= Init	immediately	Type A, 1 Trip

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
		This monitoring strategy checks if the EEPROM cell which contains the calibrated offset value is empty. The Brake Pedal Travel Sensor (BPTS) detects the position of the brake pedal. Before providing proper values, it has to be calibrated by using calibration values stored in a EEPROM cell in an EEPROM memory. This EEPROM cell is read at Ignition State. A fault is set if the EEPROM cell is empty.	Register is empty	= True	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks if the calibrated value can be read. The Brake Pedal Travel Sensor (BPTS) detects the position of the brake pedal. Before providing proper values, it has to be calibrated by using calibration values stored in an EEPROM cell in an EEPROM memory. This EEPROM cell is read at Init State. A fault is set if a read failure occurs.	Read failure occurs	= True	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks if the calibrated offset value can be read. The Brake Pedal Travel Sensor (BPTS) detects the position of the brake pedal. Before providing proper values, it has to be calibrated by using calibration values stored in an EEPROM cell. This EEPROM cell is read at Init State. A fault is set if a read failure occurs.	Read failure occurs	= True	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks if the EEPROM cell which contains the calibrations value is empty. The Brake Pedal Travel Sensor (BPTS) detects the position of the brake pedal. Before providing proper values, it has to be calibrated by using calibration values stored in an EEPROM cell. This EEPROM cell is read at Ignition State. A fault is set if the EEPROM cell is empty.	Register is empty	= True	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks the compensation of the 1, 2, 6 or 8 order of RPS signal. A fault is set if the compensation of 1, 2, 6 or 8 order of RPS signal is not working due to a lack of informations of the EEPROM.	Lack of information of the EEPROM for RPS	= True	Software State	= Init	0.005 [Sec]	Type A, 1 Trip
		This monitoring strategy checks if a stored value of RPS x-value offset could be read. The correction value for the X raw signal of the Rotor Position Sensor (RPS) is written to an EEPROM cell at end of production line. This EEPROM cell is read at Init State. A fault is set if a read failure occurs.	Read failure occurs	= True	Software State	= Init	immediately	Type A, 1 Trip

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
		This monitoring strategy checks if the EEPROM cell which contains the offset of the X-value of RPS is empty. The correction value for the X raw signal of the Rotor Position Sensor (RPS) is written to an EEPROM cell at the end of the production line. This EEPROM cell is read at Ignition State. A fault is set if the EEPROM cell is empty.	Register is empty	= True	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks if a stored value of RPS value offset could be read. The correction value for the Y raw signal of the Rotor Position Sensor (RPS) is written to an EEPROM cell at end of production line. This EEPROM cell is read at Init State. A fault is set if a read failure occurs.	Read failure occurs	= True	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks if the EEPROM cell which contains the offset of the Y-value of RPS is empty. The correction value for the Y raw signal of the Rotor Position Sensor (RPS) is written to an EEPROM cell at the end of the production line. This EEPROM cell is read at Ignition State. A fault is set if the EEPROM cell is empty.	Register is empty	= True	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks if a stored value of RPS synchronicity could be read. The amplitude synchronicity of the X and Y raw values of the Rotor Position Sensor (RPS) is written to an EEPROM cell at end of production line. This EEPROM cell is read at Init State. A fault is set if a read failure occurs.	Read failure occurs	= True	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks if the EEPROM cell which contains the offset of the X-value of RPS is empty. The amplitude synchronicity of the X and Y raw values of the Rotor Position Sensor (RPS) are written to an EEPROM cell at the end of the production line. This EEPROM cell is read at Ignition State. A fault is set if the EEPROM cell is empty.	Register is empty	= True	Software State	= Init	immediately	Type A, 1 Trip
		This monitoring strategy checks if the Rotor Position Sensor (RPS) offset can be read. The RPS offset is written to an EEPROM cell at end of production line. This EEPROM cell is read at Init State. A fault is set if a read failure occurs.	Read failure occurs	= True	Software State	= Init	immediately	Type A, 1 Trip

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
		This monitoring strategy checks if the EEPROM cell which contains the offset of the RPS is empty. The rotor idle position is written to an EEPROM cell at the end of the production line. This EEPROM cell is read at Ignition State. A fault is set if the EEPROM cell is empty.	Register is empty	= True	Software State	= Init	immediately	Type A, 1 Trip
		DTC PASS	Turn ignition off and wait at least 90 sec, turn ignition on and wait 5sec					
Control Module Random Access Memory (RAM)	P0604	This monitoring strategy checks the values of a specific RAM area. Furthermore, the address decoder is tested using test patterns to ensure bus integrity. The test writes different patterns at the addresses of this RAM area. Addresses are then read out and a signature for all the readout values is calculated. The original content in RAM is afterwards rewritten. The order of the patterns is chosen so that the signature the multibit and coupling failures can be set during the signature evaluation. A fault is set if a multibit or coupling failure is detected.	Multi-bits failure detected OR Coupling failure detected OR Address decoder test detects an error	= True = True = True	System voltage	> 6.9 V	Immediately	Type A, 1 Trip
		This monitoring strategy checks correct functionality of Random Access Memory (RAM). A programmable Built In Self Test runs in start-up phase. It is a test implemented in hardware, triggered and evaluated in software. A fault is set if the memory test detects a failure.	Memory test detects a fault	= True	Software State	= Init	Immediately	Type A, 1 Trip
		This monitoring strategy checks if there is a single bit error at RAM. Because of Error Correction Code, RAM single-bit errors are always corrected. A fault will be set if the number of bit errors exceeds a threshold.	Number of detected single-bit errors	> 2	Software State	= Running OR Shutdown	immediately	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					
Control Module Read Only Memory (ROM)	P0601	This monitoring strategy checks the correct CRC of Flash EEPROM. Initially and cyclically the complete Flash EEPROM contents is checked by calculating a CRC value and comparing it with the checksum generated during the software build process. A fault is set if a double bit error of Flash EEPROM is detected, or if more than a number of single bit errors are detected (otherwise single bit errors are corrected).	Double bit error detected OR Number of detected single bit errors	= True > 1	Software State	= Init OR Running OR Shutdown	immediately During Startup or respectively after 60 sec for cyclic flash checksum test.	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
Extended Brake Pedal Travel	C0075	This monitoring strategy checks if the differential stroke is in range. Due to a mechanical coupling of the boost body and the pedal travel sensor, the differential stroke can only have defined range. A fault is set if the differential stroke exceeds the range.	brake pedal stroke - boost body stroke	< - 5.0 mm	Software State	= Running OR Shutdown	0.04 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					
Ignition Switch - Accessory Position - Circuit Low	P2537	Detects an accessory position circuit open	Accessory	= False	Propulsion System Active Propulsion System Active Time	= True > 0.5 Sec	0.5 [sec]	Type B, 2 Trips
Ignition Switch - Circuit High	P2535	Detects if the Run/Crank input circuit is high	Short to Battery	> 5 V	CAN Communication And ECM Run/Crank Active Data	= Enabled = False	2.5 [sec]	Type A, 1 Trip
Ignition Switch - Circuit Low	P2534	Detects if the Run/Crank input circuit is low	Short to Ground Or Open Condition	< 2 V = True	CAN Communication And ECM Run/Crank Active Data	= Enabled = Active	2.5 [sec]	Type A, 1 Trip
Internal Control Module A/D Processing Performance	P060B	This monitoring strategy checks the conversion time of the ADC (Analog Digital Converter). The ADC periodically reads an analog signal and converts it into digital values. Before starting a new conversion, the monitor checks that the previous conversion is finished. A fault is set if the previous conversion is not finished for a number of checks.	number of conversions which could not be finished in time	> 9	Software State	= Running	0.003 [sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					
Lost Communication with Brake System Control Module on Bus E	U1833	This monitoring strategy checks if no messages are sent. The network driver has to send and receive all network messages. At the same time it has to check that the messages are correct (length, checksum, alive-counter, reception timeout). The diagnostic performs a Time out check. A fault is set if no message is received within a defined amount of time.	0x21B not received on Bus E	= True	System voltage AND System voltage AND Bus Off Fault Active ECU is sending/receiving on CAN AND ECU Power Mode transition diagnostic enable delay timer	> 7.5 V < 16 V = False = True ≥ 5 Sec	0.1 [Sec]	Type A, 1 Trip

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
		This monitoring strategy checks if no messages are sent. The network driver has to send and receive all network messages. At the same time it has to check that the messages are correct (length, checksum, alive-counter, reception timeout). The diagnostic performs a Time out check. A fault is set if no message is received within a defined amount of time.	0x21E not received on Bus E	= True	System voltage AND System voltage AND Bus Off Fault Active ECU is sending/receiving on CAN AND ECU Power Mode transition diagnostic enable delay timer	> 7.5 V < 16 V = False = True ≥ 5 Sec	0.1 [Sec]	Type A, 1 Trip
Lost Communication With ECM/PCM "A"	U0100	This monitoring strategy checks if no messages are sent. The network driver has to send and receive all network messages. At the same time it has to check that the messages are correct (length, checksum, alive-counter, reception timeout). The diagnostic performs a Time out check. A fault is set if no message is received within a defined amount of time.	0xC9 not received on Bus A	= True	System voltage AND System voltage AND Bus Off Fault Active ECU is sending/receiving on CAN AND ECU Power Mode transition diagnostic enable delay timer	> 7.5 V < 16 V = False = True ≥ 5 Sec	0.25 [sec]	Type B, 2 Trips
		This monitoring strategy checks if no messages are sent. The network driver has to send and receive all network messages. At the same time it has to check that the messages are correct (length, checksum, alive-counter, reception timeout). The diagnostic performs a Time out check. A fault is set if no message is received within a defined amount of time.	0x4C1 not received on Bus A	= True	System voltage AND System voltage AND Bus Off Fault Active ECU is sending/receiving on CAN AND ECU Power Mode transition diagnostic enable delay timer	> 7.5 V < 16 V = False = True ≥ 5 Sec	1.25 [sec]	Type B, 2 Trips
Lost Communication With Hybrid Powertrain Control Module	U0293	This monitoring strategy checks if no messages are sent. The network driver has to send and receive all network messages. At the same time it has to check that the messages are correct (length, checksum, alive-counter, reception timeout). The diagnostic performs a Time out check. A fault is set if no message is received within a defined amount of time.	0x1DF not received on Bus A	= True	System voltage AND System voltage AND Bus Off Fault Active ECU is sending/receiving on CAN AND ECU Power Mode transition diagnostic enable delay timer	> 7.5 V < 16 V = False = True ≥ 5 Sec	0.1 [Sec]	Type A, 1 Trip
Sensor Reference Voltage "A" Circuit Range/Performance	P06A6	This monitoring strategy checks if the BPTS supply voltage is in range. The Brake Booster Electronic Control Unit (ECU) evaluates the supply voltage of the brake pedal position sensors. A fault is set if the supply voltage is outside of a certain range.	BPTS supply voltage OR BPTS supply voltage	< 4.68 V > 5.32 V	Software State	= Init OR Running OR Shutdown	0.06 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
Sensor Reference Voltage "B" Circuit Range/Performance	P06A7	This monitoring strategy checks if the RPS1 supply voltage is in range. Periodically the RPS1 IC transmits a safety word together with raw values. The voltage-flag of the RPS1 safety word indicates either one of the following errors (failure modes cannot be distinguished): <ul style="list-style-type: none"> • Under voltage error • Over voltage error • Open circuit A fault is set if the voltage-flag of the RPS1 safety word is set.	voltage-flag of RPS1 safety word set	= True	Software State	= Running OR Shutdown	0.02 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					
Sensor Reference Voltage A Circuit Low	P0642	This monitoring strategy checks if the BPTS supply under voltage. A fault is set if BPTS under voltage is caused by Voltage Sensor3 under voltage.	BPTS supply voltage AND Voltage Sensor3	< 4.68 V < 5.6 V	Software State	= Running OR Shutdown	0.06 [Sec]	Type A, 1 Trip
		DTC PASS	Turn ignition on and wait for at least 5sec					
System Configuration Error	C1449	This monitoring strategy checks if the calibrated idle position can be reached at the end of BPTS calibration routine at end of production line.	Idle position not reached	= True	Software State	= Diag	immediately	Type A, 1 Trip
		This monitoring strategy checks if all written BPTS calibration values can be read at the end of production line.	read failure occurred	= True	Software State	= Diag	immediately	Type A, 1 Trip
		This monitoring strategy checks if the BPTS calibration routine has been completed at the end of production line	Calibration routine aborted	= True	Software State	= Diag	immediately	Type A, 1 Trip
		This monitoring checks if the pre drive check is missed at the end of the production line	Pre drive check missed	= True	Software State	= Diag	immediately	Type A, 1 Trip
		This monitoring strategy checks if measured value for idle position at OES calibration routine can be written. A fault is set if the value can not be written in the EEPROM at the end of the production line	write failure occurred	= True	Software State	= Diag	immediately	Type A, 1 Trip
		This monitoring strategy checks if measured electric motor angle value at OES calibration routine can be written. A fault is set if the value can not be written in the EEPROM at the end of the production line	write failure occurred	= True	Software State	= Diag	immediately	Type A, 1 Trip
		This monitoring strategy checks if the measured value of punger release position at OES calibration routine can be written. A fault is set if the value can not be written in the EEPROM at the end of the production line	write failure occurred	= True	Software State	= Diag	immediately	Type A, 1 Trip

17 OBDG01 Brake System Control Module 2 (BSC2) Summary Tables

Component / System	Fault Code	Monitor Strategy Description	Malfunction Criteria	Threshold Value	Secondary Parameters	Enable Conditions	Time Required	MIL Illum
		This monitoring strategy checks if the BPTS hysteresis value can be written. A fault is set if the value can not be written in the EEPROM at the end of the production line	write failure occurred	= True	Software State	= Diag	immediately	Type A, 1 Trip
		This monitoring strategy checks if the BPTS1 offset based on mounting position can be written. A fault is set if the value can not be written in the EEPROM at the end of the production line	write failure occurred	= True	Software State	= Diag	immediately	Type A, 1 Trip
		This monitoring strategy checks if the BPTS2 offset based on mounting position can be written. A fault is set if the value can not be written in the EEPROM at the end of the production line	write failure occurred	= True	Software State	= Diag	immediately	Type A, 1 Trip
		This monitoring strategy checks if the calibration value of BPTS1 has been written at the end of production line.	write failure occurred	= True	Software State	= Diag	immediately	Type A, 1 Trip
		This monitoring strategy checks if the calibration value of BPTS2 has been written at the end of production line.	write failure occurred	= True	Software State	= Diag	immediately	Type A, 1 Trip
		This monitoring strategy checks if the RPS1 X value offset can be written. A fault is set if the value can not be written in the EEPROM at the end of the production line	write failure occurred	= True	Software State	= Diag	immediately	Type A, 1 Trip
		This monitoring strategy checks if the offset Y value of RPS1 can be written. A fault is set if the value can not be written in the EEPROM at the end of the production line	write failure occurred	= True	Software State	= Diag	immediately	Type A, 1 Trip
		This monitoring strategy checks if the synchronicity value of RPS1 can be written. A fault is set if the value can not be written in the EEPROM at the end of the production line	write failure occurred	= True	Software State	= Diag	immediately	Type A, 1 Trip
